Methuselah Flies: A Case Study In The Evolution Of Aging Michael Robertson Rose, Hardip B Passananti, Margarida Matos, 2004-06-14 Methuselah Flies presents a trailblazing project on the biology of aging It describes research on the first organisms to have their lifespan increased and their aging slowed by hereditary manipulation These organisms are fruit flies from the species *Drosophila melanogaster* the great workhorse of genetics Michael Rose and his colleagues have been able to double the lifespan of these insects and improved their health in numerous respects as well The study of these flies with postponed aging is one of the best means we have of understanding and ultimately achieving the postponement of aging in humans As such the carefully presented detail of this book will be of value to research devoted to the understanding and control of aging Methuselah Flies is a tightly edited distillation of twenty years of work by many scientists contains the original publications regarding the longer lived fruit flies offers commentaries on each of the topics covered new short essays that put the individual research papers in a wider context gives full access to the original data captures the scientific significance of postponed aging for a wide academic audience

Evolutionary Biology Max K. Hecht, Bruce Wallace, 2013-11-11 Evolutionary Biology of which this is the twenty second volume continues to offer its readers a wide range of original articles reviews and commentaries on evolution in the broadest sense of that term The topics of the reviews range from anthropology molecular evolution and paleobiology to principles of systematics In recent volumes a broad spectrum of articles have appeared on such subjects as asymmetric sexual isolation biochemical systematics in plants species selection DNA hybridization and phylogenetics modes of evolution in Pleistocene rodents and development and evolution of the vertebrate limb We have also attempted to provide a forum for conflicting ideas Articles such as these often too long for standard journals are the material for Evolutionary Biology The editors continue to solicit manuscripts on an international scale in an effort to see that everyone of the many facets of biological evolution is covered Manuscripts should be sent to anyone of the following Max K Hecht Department of Biology Queens College of the City University of New York

Evolutionary Biology: Genome Evolution, Speciation, Coevolution and Origin of Life Pierre Pontarotti, 2014-07-25

This book includes the most essential contributions presented at the 17th Evolutionary Biology Meeting in Marseille which took place in September 2013. It consists of 18 chapters organized according to the following categories: Molecular and Genome Evolution, Phylogeography of Speciation and Coevolution, Exobiology and Origin of Life. The aims of the annual meetings in Marseille which bring together leading evolutionary biologists and other scientists using evolutionary biology concepts e.g. for medical research are to promote the exchange of ideas and to encourage interdisciplinary collaborations. Offering an overview of the latest findings in the field of evolutionary biology, this book represents an invaluable source of information for scientists, teachers and advanced students. Progress and Prospects in Evolutionary Biology Jeffrey R. Powell, 1997. The common fruitfly *Drosophila* is the most extensively studied of all organisms in genetical research. Thus it would appear to be the best model for achieving new insights. Its use in evolutionary studies has resulted in an explosion of knowledge which has never before been gathered into a single volume. This book spans the full range of evolutionary studies: population genetics, ecology, ecological genetics, speciation, phylogenetics, genome evolution, molecular evolution and development. In covering these topics, highlights of empirical research are emphasized and are put into the context of major issues in evolution. *Fly* Martin Brookes, 2002-10-08. A short biography of a creature that changed science. There's a buzz in the air, the sound of a billion wings vibrating to the tune of scientific success. For generations the fruit fly has been defining biology's major landmarks. From genetics to development, behavior to aging and evolution to the origin of the species, it has been a key and outside academic circles an unaccredited player in some of the twentieth century's greatest biological discoveries. In fact, everything from gene therapy to cloning and the Human Genome Project is built on the foundation of fruit fly research. This witty irreverent biography of the fruit fly provides a broad introduction to biology as well as a glimpse into how one short life has informed scientific views on such things as fundamentals of heredity, battle of the sexes and memory.

Insect Evolutionary Ecology Royal Entomological Society of London. Symposium, 2005. Insects provide excellent model systems for understanding evolutionary ecology. They are abundant, small and relatively easy to rear, and these traits facilitate both field and laboratory experiments. This book has been developed from the Royal Entomological Society's 22nd international symposium held in Reading in 2003. Topics include speciation and adaptation, life history, phenotype plasticity and genetics, sexual selection and reproductive biology, insect-plant interactions, insect-natural enemy interactions and social insects. Biology and Evolution of the Mollusca, Volume 1 Winston Frank Ponder, David R. Lindberg, Juliet Mary Ponder, 2019-11-18. Molluscs comprise the second largest phylum of animals after arthropods, occurring in virtually all

habitats Some are commercially important a few are pests and some carry diseases while many non marine molluscs are threatened by human impacts which have resulted in more extinctions than all tetrapod vertebrates combined This book and its companion volume provide the first comprehensive account of the Mollusca in decades Illustrated with hundreds of colour figures it reviews molluscan biology genomics anatomy physiology fossil history phylogeny and classification This volume includes general chapters drawn from extensive and diverse literature on the anatomy and physiology of their structure movement reproduction feeding digestion excretion respiration nervous system and sense organs Other chapters review the natural history including ecology of molluscs their interactions with humans and assess research on the group Key features of both volumes up to date treatment with an extensive bibliography thoroughly examines the current understanding of molluscan anatomy physiology and development reviews fossil history and phylogenetics overviews ecology and economic values and summarises research activity and suggests future directions for investigation Winston F Ponder was a Principal Research Scientist at The Australian Museum in Sydney where he is currently a Research Fellow He has published extensively over the last 55 years on the systematics evolution biology and conservation of marine and freshwater molluscs as well as supervised post graduate students and run university courses David R Lindberg is former Chair of the Department of Integrative Biology Director of the Museum of Paleontology and Chair of the Berkeley Natural History Museums all at the University of California He has conducted research on the evolutionary history of marine organisms and their habitats on the rocky shores of the Pacific Rim for more than 40 years The numerous elegant and interpretive illustrations were produced by Juliet Ponder

The Evolution and Fossil Record of Parasitism Kenneth De Baets, John Warren Huntley, 2021-05-07 This two volume edited book highlights and reviews the potential of the fossil record to calibrate the origin and evolution of parasitism and the techniques to understand the development of parasite host associations and their relationships with environmental and ecological changes The book deploys a broad and comprehensive approach aimed at understanding the origins and developments of various parasite groups in order to provide a wider evolutionary picture of parasitism as part of biodiversity This is in contrast to most contributions by parasitologists in the literature that focus on circular lines of evidence such as extrapolating from current host associations or distributions to estimate constraints on the timing of the origin and evolution of various parasite groups This approach is narrow and fails to provide the wider evolutionary picture of parasitism on and as part of biodiversity Volume one focuses on identifying parasitism in the fossil record and sheds light on the distribution and ecological importance of parasite host interactions over time In order to better understand the evolutionary history of parasites and their relationship with changes in the environment emphasis is given to viruses bacteria protists and multicellular eukaryotes as parasites Particular attention is given to fungi and metazoans such as bivalves cnidarians crustaceans gastropods helminths insects mites and ticks as parasites Researchers specifically evolutionary paleo biologists and parasitologists interested in the evolutionary history of parasite host interactions as well as students studying parasitism

will find this book appealing **Conceptual Breakthroughs in The Evolutionary Biology of Aging** Kenneth R. Arnold, Michael R. Rose, 2023-07-10 Conceptual Breakthroughs in the Evolutionary Biology of Aging continues the innovative Conceptual Breakthroughs series by providing a comprehensive outline of the major breakthroughs that built the evolutionary biology of aging as a leading scientific field Following the evolutionary study of aging from its humble origins to the present the book's chapters treat the field's breakthroughs one at a time Users will find a concise and accessible analysis of the science of aging viewed through an evolutionary lens Building upon widely cited studies conducted by author Michael Rose this book covers 30 subsequent years of growth and development within the field The book highlights key publications for those who are not experts in the field providing an important resource for researchers Given the prevailing interest in changing the aging process dramatically it is a powerful tool for readers who have a vested interest in understanding its causes and future control measures Reviews cell molecular theories of aging in the light of evolutionary biology Offers an evolutionary analysis of prospects for mitigating aging not commonly discussed within private and public sectors Provides readers with a radically different perspective on contemporary biological gerontology specifically through the lens of evolutionary biology Evolutionary Biology Theodosius Dobzhansky, Max K. Management Martn Aluja, Tracy C. Leskey, Charles Vincent, 2009-01-01 As the human impact upon the environment becomes more apparent and severe the need to develop agricultural techniques that cause minimal damage to the environment has increased This is particularly the case in the area of pest management where integrated pest management IPM strategies have become a fundamental component of plant protection Focusing on insect pests of tree fruits and combining behavioural research with crop protection applications this book emphasizes the importance of environmentally

sustainable approaches in an agroecosystem Both experimental and applied topics are discussed including the conceptual framework of IPM functional and behavioural ecology of a pest host detection mechanisms and monitoring tool development as well as pest management case studies Representing a comprehensive discussion of tree fruit pest management from the evolution ecology and behaviour of insect pests to the implementation of applied biorational programmes this will be essential reading for researchers as well as commercial growers and extension agents

Evolutionary Biology of Aging Michael R. Rose, 1994-10-27 This unique book looks at the biology of aging from a fundamentally new perspective one based on evolutionary theory rather than traditional concepts which emphasize molecular and cellular processes The basis for this approach lies in the fact that natural selection as a powerful determining force tends to decline in importance with age Many of the characteristics we associate with aging the author argues are more the result of this decline than any mechanical imperative contained within organic structures This theory in turn yields the most fruitful avenues for seeking answers to the problem of aging and should be recognized as the intellectual core of gerontology and the foundation for future research The author ably surveys the vast literature on aging presenting mathematical experimental and comparative findings to illustrate and support the central thesis The result is the first complete synthesis of this vital field Evolutionary biologists gerontologists and all those concerned with the science of aging will find it a stimulating strongly argued account

Encyclopedia of Evolutionary Biology, 2016-04-14 Encyclopedia of Evolutionary Biology Four Volume Set is the definitive go to reference in the field of evolutionary biology It provides a fully comprehensive review of the field in an easy to search structure Under the collective leadership of fifteen distinguished section editors it is comprised of articles written by leading experts in the field providing a full review of the current status of each topic The articles are up to date and fully illustrated with in text references that allow readers to easily access primary literature While all entries are authoritative and valuable to those with advanced understanding of evolutionary biology they are also intended to be accessible to both advanced undergraduate and graduate students Broad topics include the history of evolutionary biology population genetics quantitative genetics speciation life history evolution evolution of sex and mating systems evolutionary biogeography evolutionary developmental biology molecular and genome evolution coevolution phylogenetic methods microbial evolution diversification of plants and fungi diversification of animals and applied evolution Presents fully comprehensive content allowing easy access to fundamental information and links to primary research Contains concise articles by leading experts in the field that ensures current coverage of each topic Provides ancillary learning tools like tables illustrations and multimedia features to assist with the comprehension process

Quantitative Genetics in the Wild Anne Charmantier, Dany Garant, Loeske E. B. Kruuk, 2014 This book gathers the expertise of 30 evolutionary biologists from around the globe to highlight how applying the field of quantitative genetics the analysis of the genetic basis of complex traits aids in the study of wild populations

Evolutionary Biology: Biodiversification from Genotype to Phenotype Pierre

Pontarotti, 2015-07-10 This book presents 20 selected contributions to the 18th Evolutionary Biology Meeting which took place in September 2014 in Marseille. They are grouped under the following major themes: Genotype to Phenotype, Genetic Mechanisms of Diversification, Evolutionary Mechanisms, Speciation and Biodiversity. The aims of these annual meetings in Marseille are to bring together leading evolutionary biologists and other scientists who employ evolutionary biology concepts e.g. for medical research and to promote the exchange of ideas and encourage interdisciplinary collaborations. Offering an up-to-date overview of recent advances in the field of evolutionary biology, this book represents an invaluable source of information for scientists, teachers and advanced students.

Right here, we have countless books **Evolutionary Biology Of Flies** and collections to check out. We additionally allow variant types and as well as type of the books to browse.
