*Behavioral Mechanisms in Evolutionary Ecology* Leslie Real, 1994-11-30 The first book length exploration of behavioral mechanisms in evolutionary ecology this ambitious volume illuminates long standing questions about cause and effect relations between an animal's behavior and its environment By focusing on biological mechanisms the sum of an animal's cognitive neural developmental and hormonal processes leading researchers demonstrate how the integrated study of animal physiology cognitive processes and social interaction can yield an enriched understanding of behavior With studies of species ranging from insects to primates the contributors examine how various animals identify and use environmental resources and deal with ecological constraints as well as the roles of learning communication and cognitive aspects of social interaction in behavioral evolution Taken together the chapters demonstrate how the study of internal mechanistic foundations of behavior in relation to their ecological and evolutionary contexts and outcomes provides valuable insight into such behaviors as predation mating and dispersal Behavioral Mechanisms in Evolutionary Ecology shows how a mechanistic approach unites various levels of biological organization to provide a broader understanding of the biological bases of behavioral evolution

**Why Sex Matters** Bobbi S. Low, 2015-01-04 Why are men like other primate males usually the aggressors and risk takers Why do women typically have fewer sexual partners In *Why Sex Matters* Bobbi Low ranges from ancient Rome to modern America from the Amazon to the Arctic and from single celled organisms to international politics to show that these and many other questions about human behavior largely come down to evolution and sex More precisely as she shows in this uniquely comprehensive and accessible survey of behavioral and evolutionary ecology they come down to the basic principle that all organisms evolved to maximize their reproductive success and seek resources to do so but that sometimes cooperation and collaboration are the most effective ways to succeed This newly revised edition has been thoroughly updated to include the

latest research and reflect exciting changes in the field including how our evolutionary past continues to affect our ecological present

**Human Behavioral Ecology** Jeremy Koster, Brooke Scelza, Mary K. Shenk, 2024-03-14 Human behavioral ecology HBE applies the principles of evolutionary theory and optimisation to the study of human behavioural and cultural diversity Among other things HBE attempts to explain variation in behaviour as adaptive solutions to the competing life history demands of growth development reproduction parental care and mate acquisition This book is a comprehensive introduction to the theoretical orientation and specific findings of HBE It consolidates the insights of evolution and human behaviour into a single volume that reflects the current state and future of the field It brings together leading scholars from across the evolutionary social sciences to provide a comprehensive and thought provoking review of the state of the topic Throughout the authors explain the latest developments in theory and highlight critical debates in the literature while also engaging readers with ethnographic insights and field based studies that remain at the core of human behavioral ecology

**Inujjuamiut Foraging Strategies** Eric Alden Smith, This study of the hunters of the settlement of Inukjuak Inujjuaq in Ungava northern Quebec evaluates the utility of models drawn from evolutionary ecology including optimal foraging theory in analyzing the subsistence economy of a contemporary Inuit hunting gathering people and places the Inujjuamiut society in a general anthropological context

*Explaining Human Actions and Environmental Changes* Andrew P. Vayda, 2009-05-15 In this selection of essays from the past two decades Vayda focuses on research and explanation concerned with causes of concrete events especially human actions and the environmental changes brought about by them

*Adaptation and Human Behavior* Napoleon Chagnon, 2017-09-08 This volume presents state of the art empirical studies working in a paradigm that has become known as human behavioral ecology The emergence of this approach in anthropology was marked by publication by Aldine in 1979 of an earlier collection of studies edited by Chagnon and Irons entitled *Evolutionary Biology and Human Social Behavior An Anthropological Perspective* During the two decades that have passed since then this innovative approach has matured and expanded into new areas that are explored here The book opens with an introductory chapter by Chagnon and Irons tracing the origins of human behavioral ecology and its subsequent development Subsequent chapters written by both younger scholars and established researchers cover a wide range of societies and topics organized into six sections The first section includes two chapters that provide historical background on the development of human behavioral ecology and compare it to two complementary approaches in the study of evolution and human behavior evolutionary psychology and dual inheritance theory The second section includes five studies of mating efforts in a variety of societies from South America and Africa The third section covers parenting with five studies on societies from Africa Asia and North America The fourth section breaks somewhat with the tradition in human behavioral ecology by focusing on one particularly problematic issue the demographic transition using data from Europe North America and Asia The fifth section includes studies of cooperation and helping behaviors using data from societies in Micronesia and South America The sixth and final section consists of a

single chapter that places the volume in a broader critical and comparative context The contributions to this volume demonstrate with a high degree of theoretical and methodological sophistication the maturity and freshness of this new paradigm in the study of human behavior The volume will be of interest to anthropologists and other professions working on the study of cross cultural human behavior

**Human Evolutionary Demography** Oskar Burger, Ronald Lee, Rebecca Sear, 2024-06-14 Human evolutionary demography is an emerging field blending natural science with social science This edited volume provides a much needed interdisciplinary introduction to the field and highlights cutting edge research for interested readers and researchers in demography the evolutionary behavioural sciences biology and related disciplines By bridging the boundaries between social and biological sciences the volume stresses the importance of a unified understanding of both in order to grasp past and current demographic patterns Demographic traits and traits related to demographic outcomes including fertility and mortality rates marriage parental care menopause and cooperative behavior are subject to evolutionary processes Bringing an understanding of evolution into demography therefore incorporates valuable insights into this field just as knowledge of demography is key to understanding evolutionary processes By asking questions about old patterns from a new perspective the volume composed of contributions from established and early career academics demonstrates that a combination of social science research and evolutionary theory offers holistic understandings and approaches that benefit both fields Human Evolutionary Demography introduces an emerging field in an accessible style It is suitable for graduate courses in demography as well as upper level undergraduates Its range of research is sure to be of interest to academics working on demographic topics anthropologists sociologists demographers natural scientists working on evolutionary processes and disciplines which cross cut natural and social science such as evolutionary psychology human behavioral ecology cultural evolution and evolutionary medicine As an accessible introduction it should interest readers whether or not they are currently familiar with human evolutionary demography

**Evolution of Human Behavior** Agustin Fuentes, 2009 Author Agustin Fuentes incorporates recent innovations in evolutionary theory with emerging perspectives from genomic approaches the current fossil record and ethnographic studies He examines basic assumptions about why humans behave as they do the facts of human evolution patterns of evolutionary change in a global environmental temporal context and the interconnected roles of cooperation and conflict in human history The net result is a text that moves toward a more holistic understanding of the patterns of human evolution and a more integrated perspective on the evolution of human behavior

**BOOK JACKET** *Human Nature and the Evolution of Society* Stephen K. Sanderson, 2018-05-04 If evolution has changed humans physically has it also affected human behavior Drawing on evolutionary psychology sociobiology and human behavioral ecology Human Nature and the Evolution of Society explores the evolutionary dynamics underlying social life In this introduction to human behavior and the organization of social life Stephen K Sanderson discusses traditional subjects like mating behavior kinship parenthood status seeking and violence as well as important topics seldom included in books of

this type especially gender economies politics foodways race and ethnicity and the arts Examples and research on a wide range of human societies both industrial and nonindustrial are integrated throughout With chapter summaries of key points thoughtful discussion questions and important terms defined within the text the result is a broad ranging and comprehensive consideration of human society thoroughly grounded in an evolutionary perspective

**Theory in Social and Cultural Anthropology** R. Jon McGee, Richard L. Warms, 2013-08-28 Social and cultural anthropology and archaeology are rich subjects with deep connections in the social and physical sciences Over the past 150 years the subject matter and different theoretical perspectives have expanded so greatly that no single individual can command all of it Consequently both advanced students and professionals may be confronted with theoretical positions and names of theorists with whom they are only partially familiar if they have heard of them at all Students in particular are likely to turn to the web to find quick background information on theorists and theories However most web based information is inaccurate and or lacks depth Students and professionals need a source to provide a quick overview of a particular theory and theorist with just the basics the who what where how and why if you will In response SAGE Reference plans to publish the two volume Theory in Social and Cultural Anthropology An Encyclopedia Features Benefits Two volumes containing approximately 335 signed entries provide users with the most authoritative and thorough reference resource available on anthropology theory both in terms of breadth and depth of coverage To ease navigation between and among related entries a Reader's Guide groups entries thematically and each entry is followed by Cross References In the electronic version the Reader's Guide combines with the Cross References and a detailed Index to provide robust search and browse capabilities An appendix with a Chronology of Anthropology Theory allows students to easily chart directions and trends in thought and theory from early times to the present Suggestions for Further Reading at the end of each entry and a Master Bibliography at the end guide readers to sources for more detailed research and discussion

**Nature and Society** Philippe Descola, Gisli Palsson, 2003-12-16 The contributors to this book focus on the relationship between nature and society from a variety of theoretical and ethnographic perspectives Their work draws upon recent developments in social theory biology ethnobiology epistemology sociology of science and a wide array of ethnographic case studies from Amazonia the Solomon Islands Malaysia the Moluccan Islands rural communities from Japan and north west Europe urban Greece and laboratories of molecular biology and high energy physics The discussion is divided into three parts emphasising the problems posed by the nature culture dualism some misguided attempts to respond to these problems and potential avenues out of the current dilemmas of ecological discourse

**Evolutionary Perspectives on Environmental Problems** Dustin J. Penn, Iver Myrsterud, The twenty first century presents an increasing number of environmental problems including toxic pollution global warming destruction of tropical forests extinction of biological diversity and depletion of natural resources These environmental problems are generally due to human behavior namely over consumption of resources and overpopulation Designing effective policies to address these

problems requires a deep understanding of human behavior as well as ecology. This in turn requires considerations of human nature and the evolutionary design of the human mind. Evolutionary research on human behavior has profound implications for the environmental sciences. The aim of this collection is to bring together a variety of chapters that show how and why.

**Part 1 Human Nature and Resource Conservation** addresses environmental problems from different evolutionary perspectives. **Part 2 The Ecological Noble Savage Hypothesis** examines the notion that our environmental problems are due to Western culture and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture. **Part 3 The Tragedy of the Commons** explores the conservation of common pool or open access natural resources such as fisheries, forests, grazing lands, freshwater, and clean air. **Part 4 The Evolution of Discounting and Conspicuous Consumption** looks at the problem of explaining why people are so ecologically short sighted and why people in developed countries consume so many resources. **Part 5 Overpopulation and Fertility Declines** addresses the evolution of human reproductive decisions. **Part 6 Biophilia** aims to explain why people cherish nature as well as destroy it. The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior and the new interdisciplinary sciences of evolutionary psychology and behavioral ecology. This reader aims to help bridge the artificial division between the biological and social sciences and provide a synthesis between evolutionary sciences of human behavior and environmental sciences.

Dustin J. Penn is director, Konrad Lorenz Institute, Austrian Academy of Sciences, Vienna. Iver Myrsetrud is biologist and researcher at the Department of Biology, University of Oslo, Norway.

**The Oxford Handbook of Human Symbolic Evolution** Nathalie Gontier, Andy Lock, Chris Sinha, 2024-01-17. The biological and neurological capacity to symbolize and the products of behavioral, cognitive, sociocultural, linguistic, and technological uses of symbols: symbolism are fundamental to every aspect of human life. The Oxford Handbook of Human Symbolic Evolution explores the origins of our characteristically human abilities: our ability to speak, create images, play music, and read and write. The book investigates how symbolization evolved in human evolution and how symbolism is expressed across the various areas of human life. The field is intrinsically interdisciplinary, considering findings from fossil studies, scientific research from primatology, developmental psychology, and of course linguistics. Written by world-leading experts, thirty-eight topical chapters are grouped into six thematic parts that respectively focus on epistemological, psychological, anthropological, ethological, linguistic, and social/technological aspects of human symbolic evolution. The handbook presents an in-depth but comprehensive and interdisciplinary overview of the state of the art in the science of human symbolic evolution. This work will be of interest to academics and students active in all fields contributing to the study of human evolution.

**Primate Behavioral Ecology** Karen B. Strier, 2016-08-25. This comprehensive introductory text integrates evolutionary, ecological, and demographic perspectives with new results from field studies and contemporary noninvasive molecular and hormonal techniques to understand how different primates behave and the significance of these insights for primate conservation. Each chapter is organized around the major research themes in

the field with Strier emphasizing the interplay between theory observations and conservation issues Examples are drawn from the classic primate field studies as well as more recent studies on previously neglected species illustrating the vast behavioral variation that exists across the primate order Primate Behavioral Ecology 5th Edition also examines how anthropogenic activities are negatively impacting primate populations including a thorough analysis of behavioural plasticity and its implications This fully updated new edition incorporates exciting new discoveries and the most up to date approaches in the field to provide an invaluable overview of the field of primate behavioral ecology and its applications to primate conservation It is considered to be a must read for all students interested in primates **Culture, Biology, and**

**Anthropological Demography** Eric Abella Roth, 2004-08-16 Two distinctive approaches to the study of human demography exist within anthropology today anthropological demography and human evolutionary ecology The first stresses the role of culture in determining population parameters while the second posits that demographic rates reflect adaptive behaviors that are the products of natural selection Both sub disciplines have achieved notable successes but each has ignored and been actively disdainful of the other This text attempts a rapprochement of anthropological demography and human evolutionary ecology through recognition of common research topics and the construction of a broad theoretical framework incorporating both cultural and biological motivation Both these approaches are utilized to search for demographic strategies in varied cultural and temporal contexts ranging from African pastoralists through North American post industrial societies As such this book is relevant to cultural and biological anthropologists demographers sociologists and historians The Handbook of Evolutionary Psychology, Volume 1 David M. Buss, 2015-11-02 The indispensable reference tool for the groundbreaking science of evolutionary psychology Why is the mind designed the way it is How does input from the environment interact with the mind to produce behavior These are the big unanswered questions that the field of evolutionary psychology seeks to explore The Handbook of Evolutionary Psychology is the seminal work in this vibrant quickly developing new discipline In this thorough revision and expansion luminaries in the field provide an in depth exploration of the foundations of evolutionary psychology and explain the new empirical discoveries and theoretical developments that continue at a breathtaking pace Evolutionary psychologists posit that the mind has a specialized and complex structure just as the body has a specialized and complex structure From this important theoretical concept arises the vast array of possibilities that are at the core of the field which seeks to examine such traits as perception language and memory from an evolutionary perspective This examination is intended to determine the human psychological traits that are the products of sexual and natural selection and as such to chart and understand human nature Join the discussion of the big questions addressed by the burgeoning field of evolutionary psychology Explore the foundations of evolutionary psychology from theory and methods to the thoughts of EP critics Discover the psychology of human survival mating parenting cooperation and conflict culture and more Identify how evolutionary psychology is interwoven with other academic subjects and traditional psychological disciplines The

Handbook of Evolutionary Psychology is the definitive guide for every psychologist and student interested in keeping abreast of new ideas in this quickly developing field
