Structural Design Guide to the ACI Building Code Edward S. Hoffman, David P. Gustafson, Albert J. Gouwens, 2013-03-09 This book is intended to guide practicing structural engineers familiar with earlier ACI building codes into more profitable routine designs with the ACI 1995 Building Code ACI 318 95 Each new ACI Building Code expresses the latest knowledge of reinforced concrete in legal language for safe design

application Beginning in 1956 with the introduction of ultimate strength design each new code offered better utilization of high strength reinforcement and the compressive strength of the concrete itself Each new code thus permitted more economy as to construction material but achieved it through more detailed and complicated design calculations In addition to competition requiring independent structural engineers to follow the latest code for economy it created a professional obligation to follow the latest code for accepted levels of structural safety The increasing complexity of codes has encouraged the use of computers for design and has stimulated the development of computer based handbooks Before computer software can be successfully used in the structural design of buildings preliminary sizes of structural elements must be established from handbook tables estimates or experienced first guesses for input into the computer

Monodispersed Particles Tadao Sugimoto, 2019-11-16 Monodispersed Particles Second Edition covers all aspects of monodispersed particles including inorganic and polymer particles and their composites The book consists of four parts fundamentals preparation analyses and applications Specifically the fundamental part covers the theoretical insight into the surface energy of particles and its application to the formulation of the new theories of nucleation growth and habit formation of monodispersed particles In addition the theories of recrystallization and solid solution formation are introduced These fundamental theories are applied to the precise control of their size size distribution shape internal structure and composition leading to the design of diverse monodispersed functional particles widely used in basic science and modern industry This second edition is fully updated and revised detailing new theories and recent progress in the field of nanoparticles including advanced nucleation theory arrested growth mechanism for monodispersed nanoparticles and energetics of habit formation Additionally the text covers in depth insights into the anisotropic growth of Au and Ag nanoparticles the formation mechanisms of polycrystalline Au spheres iron oxide nanoparticles in heat up and hot injection processes amorphous TiO₂ spheres in a sol gel system anatase TiO₂ in a gel sol system and their shape control AgCl nanoparticles in a reverse micelle system organic inorganic hybrid liquid crystals and extensive biomedical applications Covers most of the known uniform particles including inorganic and polymer particles and their composites Includes development of novel fundamental theories of formation mechanisms full of the author's own original ideas and detailed background discussion on recent progress in the field of nanoparticles and the latest advances in their applications Features 2000 bibliographic references providing a comprehensive guide to related study
