Kislowski, 2008 A hurricane is a tropical storm with winds that have reached a constant speed of 74 miles per hour or more Hurricane winds blow in a large spiral around a relative calm centre known as the eye The eye is generally 20 to 30 miles wide and the storm may extend outward 400 miles As a hurricane approaches the skies will begin to darken and winds will grow in strength As a hurricane nears land it can bring torrential rains high winds and storm surges A single hurricane can last for more than 2 weeks over open waters and can run a path across the entire length of the eastern seaboard August and September are peak months during the hurricane season that lasts from 1 June to 30 November This book presents the facts and history of hurricanes      Recent Hurricane Research Anthony Lupo, 2011-04-19 This book represents recent research on tropical cyclones and their impact and a wide range of topics are covered An updated global climatology is presented including the global occurrence of tropical cyclones and the terrestrial factors that may contribute to the variability and long term trends in their occurrence Research also examines long term trends in tropical cyclone occurrences and intensity as related to solar activity while other research discusses the impact climate change may have on these storms The dynamics and structure of tropical cyclones are studied with traditional diagnostics employed to examine these as well as more modern

approaches in examining their thermodynamics The book aptly demonstrates how new research into short range forecasting of tropical cyclone tracks and intensities using satellite information has led to significant improvements In looking at societal and ecological risks and damage assessment authors investigate the use of technology for anticipating and later evaluating the amount of damage that is done to human society watersheds and forests by land falling storms The economic and ecological vulnerability of coastal regions are also studied and are supported by case studies which examine the potential hazards related to the evacuation of populated areas including medical facilities These studies provide decision makers with a potential basis for developing improved evacuation techniques

The Routledge Handbook of Urban Disaster Resilience  
Michael Lindell, 2019-07-30 The Routledge Handbook of Urban Disaster Resilience emphasizes the intersection of urban planning and hazard mitigation as critical for community resilience considering the interaction of social environmental and physical systems with disasters The Handbook introduces and discusses the phases of disaster mitigation preparedness response and recovery as well as each of the federal state and local players that address these phases from a planning and policy perspective Part I provides an overview of hazard vulnerability that begins with an explanation of what it means to be vulnerable to hazards especially for socially vulnerable population segments Part II discusses the politics of hazard mitigation the failures of smart growth placed in hazardous areas the wide range of land development policies and their associated risk the connection between hazards and climate adaptation and the role of structural and non structural mitigation in planning for disasters Part III covers emergency preparedness and response planning the unmet needs people experience and community service planning evacuation planning and increasing community capacity and emergency response in developing countries Part IV addresses recovery from and adaption to disasters with topics such as the National Disaster Recovery Framework long term housing recovery population displacement business recovery and designs in disasters Finally Part V demonstrates how disaster research is interpreted in practice how to incorporate mitigation into the comprehensive planning process how states respond to recovery how cities undertake recovery planning and how to effectively engage the whole community in disaster planning The Routledge Handbook of Urban Disaster Resilience offers the most authoritative and comprehensive coverage of cutting edge research at the intersection of urban planning and disasters from a U S perspective This book serves as an invaluable guide for undergraduate and postgraduate students future professionals and practitioners interested in urban planning sustainability development response planning emergency planning recovery planning hazard mitigation planning land use planning housing and community development as well as urban sociology sociology of the community public administration homeland security climate change and related fields

**Displaced by Disaster**  
Ann-Margaret Esnard, Alka Sapat, 2014-05-23 Displacement has traditionally been conceptualized as a phenomenon that results from conflict or other disruptions in developing or unstable countries Hurricane Katrina shattered this notion and highlighted the various dilemmas of population displacement in the United States The dilemmas stem from that of

inconsistent terminology and definitions lack of efforts to quantify displacement risk potential and that factor displacement vulnerability into community plans lack of understanding of differential needs of displacees especially during long term recovery periods and policy and institutional responses or lack thereof especially as it relates to post disaster sheltering and housing Incorporating relevant examples cases and policies Esnard and Sapat look at the experience of other countries and how the international community has dealt with hundreds of thousands of individuals who have been forced to leave their homes Displaced by Disaster addresses such issues from a planning and policy perspective informed by scholarship in disciplines such as emergency management political science sociology and anthropology It is ideal for students and practitioners working in the areas of disaster management planning public administration and policy housing and the many disciplines connected to disaster issues

**Coastal Lagoons** Michael J. Kennish, Hans W. Paerl, 2010-06-15 Written by an outstanding group of contributors this book examines the function and structure of coastal lagoonal ecosystems and the natural and anthropogenic drivers of change that affect them most notably nutrient over enrichment from coastal watersheds and airsheds The contributors target the susceptibility of coastal lagoons to eutrophication the indicators of eutrophic conditions the influences of natural factors such as major storms and other climate effects and the resulting biotic and ecosystem impairments that have developed The book compares biogeochemical and ecological response to nutrient enrichment and other pollutants in lagoonal estuaries to those in other estuarine types

**Developing Grounded Theory** Janice M. Morse, Barbara J. Bowers, Kathy Charmaz, Adele E. Clarke, Juliet Corbin, Phyllis Noerager Stern, 2016-07-01 Grounded theory is the most popular genre of qualitative research used in the health professions and is widely used elsewhere in the research world In this volume six key grounded theory methodologists examine the history principles and practices of this method highlighting areas in which different strands of the methods diverge Chapters cover the work of Anselm Strauss Barney Glaser Leonard Schatzman and the postmodern and constructivist schools Dialogues between the participants sharpen the debate and show key topics of agreement and disagreement This volume will be ideal for courses on grounded theory that wish to show the ways in which it can be used in research studies
