Fact Finders Natural World:

Fact Finders Gallery Books,1989-05-01 Examines such aspects of the natural world as earth formations weather seas and rivers plants and animals Travel Writing and the Natural World, 1768-1840 P. Smethurst,2012-10-10 Taking as a starting point the parallel occurrence of Cook s Pacific voyages the development of natural history scenic tourism in Britain and romantic travel in Europe this book argues that the effect of these practices was the production of nature as an abstract space and that the genre of travel writing had a central role in reproducing it **Living Earth** Suzanne Garbe,2019-05-01 Illustrated instructions guide readers through Earth Science experiments focusing on plant and animal life including photosynthesis bacteria minerals and fossils An engaging way to support the Next Generation Science Standards Experiments are simple accessible and something that could be used at a science fair in the classroom or at home Exploring life on Earth has never been simpler Fact Finding Pamphlets in Foreign Trade National Foreign Trade Council,1927

Signs of Science Dale J. Pratt,2001 Signs of Science Literature Science and Spanish Modernity since 1868 traces how Spanish culture represented scientific activity from the mid nineteenth century onward The book combines the global perspective afforded by historical narrative with detailed rhetorical analyses of images of science in specific literary and scientific texts As literary criticism it seeks to illuminate similarities and differences in how science and scientists are pictured as cultural history it follows the course of a centuries long dialogue about Spain and science Joint Fact-Finding in Urban Planning and Environmental Disputes Masahiro Matsuura,Todd Schenk,2016-10-04 The days of rationalist scientific management and deference to official data are behind us The credibility of experts and the information they provide are regularly challenged officials are routinely provided with conflicting sets of facts as they plan and make decisions and decision makers and stakeholders alike are largely skeptical that technical information will adequately account for the various interests and concerns and lead to the right outcomes They struggle to reconcile technical information with other forms of knowledge and differing interests priorities and perspectives Issues like climate change are complicating matters even further as scientists and technicians must increasingly acknowledge the uncertainty and potential fallibility of their findings and highlight the dynamic nature of the systems they are explaining This book examines how groups looking to plan and make decisions in any number of areas can wade through the imperfect and often contradictory information they have to make fair efficient wise and well informed choices It introduces an emerging and very promising approach called joint fact finding JFF Rather than each stakeholder group marshaling the set of facts that best advance their respective interests and perspectives while discrediting the contradictory facts others provide groups are challenged to collaboratively generate shared sets of facts that all parties accept This book introduces readers to the theory of JFF the value it can provide and how they can adopt this approach in practice It brings together writings from leading practitioners and scholars from around the world that are at the forefront of the JFF approach to science intensive policymaking urban planning and environmental

dispute resolution The first set of chapters outlines the concept of JFF and situates it within other bodies of theory and practice The second set of case based chapters elucidates how JFF is being applied in practice This book delivers a new perspective to scholars in the field of public policy urban planning environmental studies and science and technology studies as well as public officials technical experts policy consultants and professional facilitators *Chimpanzee* Kevin D. Hunt,2020-08-20 The chimpanzee is one of our planet s best loved and most instantly recognisable animals Splitting from the human lineage between four and six million years ago it is along with its cousin the bonobo our closest living relative sharing around 94% of our DNA First encountered by Westerners in the seventeenth century virtually nothing was known about chimpanzees in their natural environment until 1960 when Jane Goodall travelled to Gombe to live and work with them Accessibly written yet fully referenced and uncompromising in its accuracy and comprehensiveness this book encapsulates everything we currently know about chimpanzees from their discovery and why we study them to their anatomy physiology genetics and culture The text is beautifully illustrated and infused with examples and anecdotes drawn from the author s thirty years of primate observation making this a perfect resource for students of biological anthropology and primatology as well as non specialists interested in chimpanzees *Dictionary of Environmental Health* Frank R. Spellman,2022-04-11 Every branch of science every profession and every engineering process has its own language for communication Environmental health is no different To work even at the edge of the major environmental aspects of this challenging field you must acquire a fundamental but wide ranging vocabulary and understanding of the components that make it up As Voltaire said If you wish to converse with me define your terms In this publication we define and in many instances fully explain in plain English the terms or tools concepts and ideas used by environmental health professionals environmental science professionals safety industrial hygiene practitioners engineers and non science professionals It is important to point out that environmental health is not a single topic but rather a complex colorful and diversified range of interrelated subjects including all of the basic sciences computer science government engineering energy renewable energy hydraulic fracking security disease industrial hygiene injury identification prevention and control and much more The practicing environmental health professional specialist technician or student of environmental health should know these topics without them it is difficult if not impossible to practice in any of the environmental fields The Dictionary of Environmental Health is a one of a kind comprehensive reference that serves as both a dictionary and encyclopedia This book is an indispensable resource for individuals throughout environmental occupational and public health industries It defines thousands of words illustrating the enormous magnitude of the environmental health field Terms are alphabetically arranged with concise and succinct definitions along with expanded explanations wherever needed These terms and definitions are drawn from varied specialized and technical environmental fields that can be understood by professional students and general readers alike

How Modern Science Came into the World Floris Cohen,2025-10-01 Once upon a time The Scientific Revolution of

the 17th century was an innovative concept that inspired a stimulating narrative of how modern science came into the world Half a century later what we now know as the master narrative serves rather as a strait jacket so often events and contexts just fail to fit in No attempt has been made so far to replace the master narrative H Floris Cohen now comes up with precisely such a replacement Key to his path breaking analysis cum narrative is a vision of the Scientific Revolution as made up of six distinct yet narrowly interconnected revolutionary transformations each of some twenty five to thirty years duration This vision enables him to explain how modern science could come about in Europe rather than in Greece China or the Islamic world It also enables him to explain how half way into the 17th century a vast crisis of legitimacy could arise and in the end be overcome Building forth on his earlier *The Scientific Revolution A Historiographical Inquiry* 1994 his new book takes the latest researches duly into account while connecting these in highly innovative ways It is meant throughout as a constructive effort to break up all too deeply frozen patterns of thinking about the history of science

Building a God Christopher DiCarlo, 2025-01-21 Renowned ethicist provides essential guide to successfully navigating the future AI landscape In *Building a God* Christopher DiCarlo explores the profound implications of artificial intelligence surpassing human intelligence a destiny that seems not just possible but inevitable At this critical crossroad in our evolutionary history DiCarlo a renowned ethicist in AI delves into the ethical mazes and technological quandaries of our future interactions with superior AI entities From healthcare enhancements to the risks of digital manipulation this book scrutinizes AI's dual potential to elevate or devastate humanity DiCarlo advocates for robust global governance of AI proposing visionary policies to safeguard our society AI will positively impact our lives in myriad ways from healthcare to education manufacturing to sustainability AI powered tools will improve productivity and add ease to the most massive global industries and to our own personal daily routines alike But we have already witnessed the tip of the iceberg when it comes to the risks of this new technology AI algorithms can manipulate human behavior spread disinformation shape public opinion and impact democratic processes Sophisticated technologies such as GPT 4 Dall E 2 and video Deepfakes allow users to create distort and alter information Perhaps more troubling is the foundational lack of transparency in both the utilization and design of AI models What ethical precepts should be determined for AI and by whom And what will happen if rogue abusers decide not to comply with such ethical guidelines How should we enforce these precepts Should the UN develop a Charter or Accord which all member states agree to and sign off on Should governments develop a form of international regulative body similar to the International Atomic Energy Agency IAEA which regulates not only the use of nuclear energy but nuclear weaponry as well In this incisive and cogent meditation on the future of AI DiCarlo argues for the

ethical governance of AI by identifying the key components obstacles and points of progress gained so far by the global community and by putting forth thoughtful and measured policies to regulate this dangerous technology *Practicing Science*, 2001 These first person accounts demonstrate how students including nonscience majors can learn to do science as it is done in the real world through hypothesis building observation and experimental design Appointment of Fact-finding Boards United States. Congress. House. Committee on Labor, 1946 **Design-Centered Entrepreneurship** Min Basadur, Michael Goldsby, 2016-06-17 Supported by extensive research and field testing Design Centered Entrepreneurship presents a concise problem solving approach to developing a unique business concept Step by step guidelines provide insight into exploring market problem spaces uncovering overlooked opportunities reframing customer problems and creating business solutions Basadur and Goldsby present students with a creative and practical approach to problem finding perception organizational culture and ethics in the entrepreneurial field Plenty of useful diagrams help to organize key concepts making them easily accessible to readers Drawing on methodologies from the design field the book will help students of entrepreneurship fill in the missing piece that transforms opportunity recognition into a viable business concept Additional support for students and instructors including a virtual Creative Problem Solving Profile can be found at www.basadurprofile.com *Bulletin - The Cleveland Museum of Natural History*, 1965 **Accelerating Democracy** John O. McGinnis, 2013 How to adapt democracy to the accelerating pace of technological change and why it s critical that we do Successful democracies throughout history from ancient Athens to Britain on the cusp of the industrial age have used the technology of their time to gather information for better governance Our challenge is no different today but it is more urgent because the accelerating pace of technological change creates potentially enormous dangers as well as benefits Accelerating Democracy shows how to adapt democracy to new information technologies that can enhance political decision making and enable us to navigate the social rapids ahead John O McGinnis demonstrates how these new technologies combine to address a problem as old as democracy itself how to help citizens better evaluate the consequences of their political choices As society became more complex in the nineteenth century social planning became a top down enterprise delegated to experts and bureaucrats Today technology increasingly permits information to bubble up from below and filter through more dispersed and competitive sources McGinnis explains how to use fast evolving information technologies to more effectively analyze past public policy bring unprecedented intensity of scrutiny to current policy proposals and more accurately predict the results of future policy But he argues that we can do so only if government keeps pace with technological change For instance it must revive federalism to permit different jurisdictions to test different policies so that their results can be evaluated and it must legalize information markets to permit people to bet on what the consequences of a policy will be even before that policy is implemented Accelerating Democracy reveals how we can achieve a democracy that is informed by expertise and social scientific knowledge while shedding the arrogance and insularity of a technocracy **Research**

Handbook on International Law and Natural Resources Elisa Morgera, Kati Kulovesi, 2016-11-25 Research Handbook on International Law and Natural Resources provides a systematic and comprehensive analysis of the role of international law in regulating the exploration and exploitation of natural resources. It illuminates interactions and tensions between international environmental law, human rights law, and international economic law. It also discusses the relevance of soft law, international dispute settlement, as well as of various unilateral, bilateral, regional, and transnational initiatives in the governance of natural resources. While the Handbook is accessible to those approaching the subject for the first time, it identifies pressing areas for further investigation that will be of interest to advanced researchers.

Global Fictions and Environmental Disaster Martin Premoli, 2025-08-07 Examining contemporary literary depictions of environmental disasters through a North-South axis, this book explores the resonances and dissonances between environmentalisms of marginalized communities in the U.S. and the global South. Pairing anti-colonial texts from the United States with examples from the Global South, it interrogates the complexity of global precarity and particular forms of environmental violence. Each pairing is linked to a specific manifestation of environmental disaster, such as hurricane, drought, species extinction, and agricultural collapse. Featuring texts from authors such as Jesmyn Ward, Monique Roffey, Paolo Bacigalupi, Alexis Wright, Linda Hogan, Henrietta Rose Innes, Ruth Ozeki, and Sonora Jha, this book models how a comparative global North/global South approach to literary studies can help us untangle the complex power dynamics and differentials of the Anthropocene.
