Factor Analysis and Measurement in Sociological Research, 1981 Factor Analysis and Measurement in Sociological Research David J. Jackson, Edgar F. Borgatta, 1981 **Measurement, Design, and Analysis** Elazar J. Pedhazur, Liora Pedhazur Schmelkin, 2013-04-15 In textbooks and courses in statistics substantive and measurement issues are rarely if at all considered Similarly textbooks and courses in measurement virtually ignore design and analytic questions and research design textbooks and courses pay little attention to analytic and measurement issues This fragmentary approach fosters a lack of appreciation of the interrelations and interdependencies among the various aspects of the research endeavor Pedhazur and Schmelkin's goal is to help readers become proficient in these aspects of research and their interrelationships and to use that information in a more integrated manner The authors offer extensive commentaries on inputs and outputs of computer programs in the context of the topics presented Both the organization of the book and the style of presentation allow for much flexibility in choice sequence and degree of sophistication with which topics are dealt

The Essence of Multivariate Thinking Lisa L. Harlow, 2005-02-17 The Essence of Multivariate Thinking is intended to make multivariate statistics more accessible to a wide audience To encourage a more thorough understanding of multivariate methods author Lisa Harlow suggests basic themes that run through most statistical methodology The most pervasive theme is multiplicity The author argues that the use of multivariate methods encourages multiple ways of investigating phenomena She explains that widening our lens to identify multiple theories constructs measures samples methods and time points provide greater reliability and validity in our research Dr Harlow then shows how these themes are applied to several multivariate methods with the hope that this will ease understanding in the basic concepts of multivariate thinking Formulas are kept at a minimum The first three chapters review the core themes that run through multivariate methods Seven different multivariate methods are then described using 10 questions that illuminate the main features uses multiplicity themes interpretations and applications The seven methods covered are multiple regression analysis of covariance multivariate analysis of variance discriminant function analysis logistic regression canonical correlation and principal components factor analysis The final chapter pulls together the principal themes and features charts that list common themes and how they pertain to each of the methods discussed The Essence of Multivariate Thinking features A unique focus on the underlying themes that run through most multivariate methods A dual focus on significance tests and effect sizes to encourage readers to adopt a thorough approach to assessing the significance and magnitude of their findings A detailed example for each method to delineate how the multivariate themes apply Tabular results from statistical analysis programs that mirror sections of the output files A common dataset throughout the chapters to provide continuity with the variables and research questions A CD with data SAS program setup and output homework exercises and chapter lectures This book is useful to advanced students professionals and researchers interested in applying multivariate methods in such fields as

behavioral medicine social health personality developmental cognitive and industrial organizational psychology as well as in education and evaluation A preliminary knowledge of basic statistics research methods basic algebra and finite mathematics is recommended **Handbook of Multivariate Experimental Psychology** John R. Methods of Family Research Theodore N. Greenstein,Shannon N. Davis,2012-07-16 An important skill for students whether they remain in academia or move on to careers elsewhere is to become critical consumers of research with the ability to sort out and evaluate sometimes conflicting findings that are reported in the popular media While traditional sociological methods texts focus on teaching how to produce research Greenstein teaches students how to understand the research results they ll encounter He equips students with the essentials they ll need to become intelligent and critical readers of research

Modern Multidimensional Scaling Ingwer Borg,Patrick Groenen,2013-04-18 Multidimensional scaling MDS is a

technique for the analysis of similarity or dissimilarity data on a set of objects. Such data may be intercorrelations of test items, ratings of similarity on political candidates or trade indices for a set of countries. MDS attempts to model such data as distances among points in a geometric space. The main reason for doing this is that one wants a graphical display of the structure of the data, one that is much easier to understand than an array of numbers, and moreover one that displays the essential information in the data, smoothing out noise. There are numerous varieties of MDS. Some facets for distinguishing among them are the particular type of geometry into which one wants to map the data, the mapping function, the algorithms used to find an optimal data representation, the treatment of statistical error in the models, or the possibility to represent not just one but several similarity matrices at the same time. Other facets relate to the different purposes for which MDS has been used, to various ways of looking at or interpreting an MDS representation, or to differences in the data required for the particular models. In this book we give a fairly comprehensive presentation of MDS. For the reader with applied interests, only the first six chapters of Part I should be sufficient. They explain the basic notions of ordinary MDS with an emphasis on how MDS can be helpful in answering substantive questions.

Changes in Reading Comprehension Across Cultures and Over Time Petra Lietz, 1995 Social Security Bulletin, 1981 **Contemporary Psychometrics** Albert Maydeu-Olivares, John J. McArdle, 2005-05-06

Contemporary Psychometrics features cutting edge chapters organized in four sections: test theory, factor analysis, structural equation modeling, and multivariate analysis. The section on test theory includes topics such as multidimensional item response theory (IRT), the relationship between IRT and factor analysis, estimation and testing of these models, and basic measurement issues that are often neglected. The factor analysis section reviews the history and development of the model, factorial invariance, and factor analysis indeterminacy, and Bayesian inference for factor scores and parameter estimates. The section on structural equation modeling (SEM) includes the general algebraic graphic rules for latent variable SEM, a survey of goodness of fit assessment, SEM resampling methods, a discussion of how to compare correlations between and within independent samples, dynamic factor models based on ARMA time series models, and multi-level factor analysis models for continuous and discrete data. The final section on multivariate analysis includes topics such as dual scaling of ordinal data, model specification, and missing data problems in time series models, and a discussion of the themes that run through all multivariate methods. This tour de force through contemporary psychometrics will appeal to advanced students and researchers in the social and behavioral sciences and education, as well as methodologists from other disciplines.

Methods of Research on Human Development and Families Theodore N. Greenstein, Shannon N. Davis, 2019-07-11

Methods of Research on Human Development and Families is an introduction to quantitative and qualitative research methods that teaches students how to be intelligent and critical consumers of research on families. This new book has been adapted from the author team's previous SAGE text *Methods of Family Research* and includes applications and examples from both family science and human development research. Socio-Economic Conditions Gianni Betti,Achille Lemmi,2021-03-30 Showcasing fuzzy set theory this book highlights the enormous potential of fuzzy logic in helping to analyse the complexity of a wide range of socio economic patterns and behaviour The contributions to this volume explore the most up to date fuzzy set methods for the measurement of socio economic phenomena in a multidimensional and or dynamic perspective Thus far fuzzy set theory has primarily been utilised in the social sciences in the field of poverty measurement These chapters examine the latest work in this area while also exploring further applications including social exclusion the labour market educational mismatch sustainability quality of life and violence against women The authors demonstrate that real world situations are often characterised by imprecision uncertainty and vagueness which cannot be properly described by the classical set theory which uses a simple true false binary logic By contrast fuzzy set theory has been shown to be a powerful tool for describing the multidimensionality and complexity of social phenomena This book will be of significant interest to economists statisticians and sociologists utilising quantitative methods to explore socio economic phenomena *Information Sur Les Sciences Sociales* International Social Science Council,1967* Bibliographie Internationale de Sociologie 1980 ,1982 Each Bibliography lists and annotates the most important works published during the year They are arranged by topic and indexed by author subject and geographic location **Journal of Personality and Social Psychology** ,1985
