**Facts and the Function of Truth** Huw Price, 1989-01-01      **Handbook of Epistemology** I. Niiniluoto, Matti Sintonen, Jan Wolenski, 2004-03-31 Epistemology or theory of knowledge has always been one of the most important if not the most important field of philosophy New arguments are constantly brought to bear on old views new variants are marshalled to revive ancient stands new concepts and distinctions increase the sophistication of epistemological theories There are a great many excellent textbooks monographs as well as anthologies consisting of articles in epistemology Similarly there are useful philosophical dictionaries which contain a great number of relatively short entries and general philosophical handbooks which also touch epistemological issues This volume of 27 essays grew out from the interest to see a handbook which is devoted entirely to the historical roots and systematic development of theory of knowledge It is not intended to compete but to supplement the already existing literature It aims at giving both beginners and more advanced students as well as professionals in epistemology and other areas of philosophy an overview of the central problems and solutions of epistemology The essays are self contained and still often rather extensive discussions of the chosen aspects of knowledge The contributions presuppose very little familiarity with previous literature and only a few of them require the mastery of even elementary logical notation This we hope makes the volume also accessible to the philosophically interested wider audience The contributors were asked to provide substantial up to date self contained and balanced surveys of the various subareas and more specific topics of epistemology with reference to literature      An Introduction to Metaphilosophy Søren Overgaard, Paul Gilbert, Stephen Burwood, 2013-03-07 What is philosophy How should we do it Why should we bother to These are the kinds of questions addressed by metaphilosophy the philosophical study of the nature of philosophy itself Students of philosophy today are faced with a confusing and daunting array of philosophical methods approaches and styles and also deep divisions such as the notorious rift between analytic and Continental philosophy This book takes readers through a full range of approaches analytic versus Continental scientific versus humanistic pure versus applied enabling them to locate and understand these different ways of doing philosophy Clearly and accessibly written it will stimulate reflection on philosophical practice and will be invaluable for students of philosophy and other philosophically inclined readers      **The SAGE Encyclopedia of Theory in Science, Technology, Engineering, and Mathematics** James Mattingly, 2022-09-21 The SAGE Encyclopedia of Theory is a landmark work that examines theory in general and the broad split between the hard and soft sciences a split that is being re examined as approaches to scientific questions become increasingly multidisciplinary      **The Routledge Handbook of Philosophy of Information** Luciano Floridi, 2016-06-17 Information and communication technology occupies a central place in the modern world with society becoming increasingly dependent on it every day It is therefore unsurprising that it has become a growing subject area in contemporary philosophy which relies heavily on informational concepts The Routledge Handbook of Philosophy of Information is an outstanding

reference source to the key topics and debates in this exciting subject and is the first collection of its kind. Comprising over thirty chapters by a team of international contributors, the Handbook is divided into four parts: basic ideas, quantitative and formal aspects, natural and physical aspects, human and semantic aspects. Within these sections, central issues are examined, including probability, the logic of information, informational metaphysics, the philosophy of data and evidence, and the epistemic value of information. The Routledge Handbook of Philosophy of Information is essential reading for students and researchers in philosophy, computer science, and communication studies.

**The New Theory of Time** Professor L. Nathan Oaklander, University Distinguished Faculty Scholar and Professor of Philosophy, Quentin Smith, 1994-01-01. The most important debate among twentieth-century philosophers of time has been whether events that have happened, are happening, or will happen, are equally real. The tenseless theory of time, or whether there is a fundamental distinction between past, present, and future, with only present events possessing full existence, the tensed theory. In the 1980s, a new version of the tenseless theory of time emerged. While advocates still posit that all events are equally real, they depart from the old tenseless theory by conceding that tensed expressions cannot be translated into tenseless ones and support their view of time using other arguments. This anthology offers the latest turns in the debate over the new theory of time, with essays written by many of the most prominent contemporary thinkers in the philosophy of time. There are discussions on the role or nonrole of language in determining which theory is true, McTaggart's paradox, and the logical difficulties that defenders of the tenseless theory say are inherent in tensed theory, and the nature of our experience of time, which proponents of both theories claim can now be explained. The Preface and the General Introduction to the book set the debate within the wider philosophical context and show why the subject of temporal becoming is a perennial concern of science, religion, language, logic, and the philosophy of mind.

*Advances in Information Retrieval Theory* Leif Azzopardi, Gabriella Kazai, Stephen Robertson, Stefan Rüger, Milad Shokouhi, Dawei Song, Emine Yilmaz, 2009-08-31. This book constitutes the refereed proceedings of the Second International Conference on the Theory of Information Retrieval (ICTIR 2009) held in Cambridge, UK, in September 2009. The 18 revised full papers, 14 short papers, and 11 posters presented together with one invited talk were carefully reviewed and selected from 82 submissions. The papers are categorized into four main themes: novel IR models, evaluation, efficiency, and new perspectives in IR. Twenty-one papers fall into the general theme of novel IR models, ranging from various retrieval models, query and term selection models, Web IR models, developments in novelty and diversity, to the modeling of user aspects. There are four papers on new evaluation methodologies, e.g., modeling score distributions, evaluation over sessions, and an axiomatic framework for XML retrieval evaluation. Three papers focus on the issue of efficiency and offer solutions to improve the tractability of PageRank, data cleansing practices for training classifiers, and approximate search for distributed IR. Finally, four papers look into new perspectives of IR and shed light on some new emerging areas of interest, such as the application and adoption of

the ground for legitimating social and political norms On the political level many seem to agree that democracy doesn't need foundations Nor are its citizens expected to discuss the worth of their comprehensive conceptions of the good life According to Rawls for example we have to accept that politics in a democratic society can never be guided by what we see as the whole truth 1993 243 And yet we still call upon truth when we participate in defining the basic structure of our society and argue why our opinions beliefs and preferences need to be taken seriously We do not think that our views need to be taken into account by others because they are our views but because we think they are true If in a democratic society citizens have to deal with the challenge of affirming their claims as true we need to analyse the precise relationship between truth and democracy Does truth matter to democracy and if so what is the place of truth in democratic politics How can citizens affirm the truth of their claims and accept at the same time that their truth is just one amongst many Our book centers on the role of the public sphere in these pressing questions It tries to give a comprehensive answer to these questions from the perspective of the main approaches of contemporary democratic theory deliberative democracy political pragmatism and liberalism A confrontation of these approaches will result in a more encompassing philosophical understanding of our plural democracy which in this era of globalization is more complex than ever before Because a good understanding of the function meaning and shortcomings of the public sphere is essential to answering these questions a good deal of the book addresses these issues Historically after all the idea that citizens have to engage each other in discussion in order to determine the structure and goals of society is connected to the rational ideal of a public sphere where conflicting views can be expressed formed and transformed But hasn't the collective decision making in which everyone participates on an equal footing turned out to be a deceptive ideal or a simple illusion Not every individual in society has equal access to the podium Furthermore power being an inevitable feature of the public sphere seems to permanently endanger its democratic value Moreover the existence of this sphere depends on a specific ethos and particular public spaces where citizens are called upon to present themselves as citizens as people taking responsibility for their society It is not clear whether this ethos and these spaces exist at all and if so if they preserved their ascribed capacity for constituting democratic truth By answering these questions we expect to deepen our understanding of the relation between truth and democracy
