**Fahrenheit's Letters to Leibniz and Boerhaave**, 2023-08-21      **Daniel Gabriel Fahrenheit's Letters to Leibniz and Boerhaave** Daniel Gabriel Fahrenheit, 1983      **Autographic Design** Dietmar Offenhuber, 2023-12-19 An ambitious vision for design based on the premise that data is material not abstract Data analysis and visualization are crucial tools in today's society and digital representations have steadily become the default Yet more and more often we find that citizen scientists environmental activists and forensic amateurs are using analog methods to present evidence of pollution climate change and the spread of disinformation In this illuminating book Dietmar Offenhuber presents a model for these practices a model to make data generation accountable autographic design Autographic refers to the notion that every event inscribes itself in countless ways Think of a sundial for example a perfectly autographic device that displays information on itself Inspired by such post digital practices of visualization and evidence construction Offenhuber describes an approach to visualization based on the premise that data is a material entity rather than an abstract representation Emerson wrote Every act of the man inscribes itself in the memories of his fellows and in his own manners and face In Autographic Design Offenhuber introduces a model for design that emphasizes traces imprints and self inscriptions turning them into sensory displays In an age where misinformation is harder and harder to identify Autographic Design makes an urgent and persuasive case for a different approach that calls attention to the production of data and its connection to the material world

**Inventing Temperature** Hasok Chang, 2004-08-05 What is temperature and how can we measure it correctly These may seem like simple questions but the most renowned scientists struggled with them throughout the 18th and 19th centuries In Inventing Temperature Chang examines how scientists first created thermometers how they measured temperature beyond the reach of standard thermometers and how they managed to assess the reliability and accuracy of these instruments without a circular reliance on the instruments themselves In a discussion that brings together the history of science with the philosophy of science Chang presents the simple yet challenging epistemic and technical questions about these instruments and the complex web of abstract philosophical issues surrounding them Chang's book shows that many items of knowledge that we take for granted now are in fact spectacular achievements obtained only after a great deal of innovative thinking painstaking experiments bold conjectures and controversy Lurking behind these achievements are some very important philosophical questions about how and when people accept the authority of science      *Human Temperature Control* Eugene H. Wissler, 2018-10-29 The principal objective of this book is to provide information needed to define human thermal behavior quantitatively Human thermal physiology is defined using mathematical methods routinely employed by physicists and engineers but seldom used by physiologists Major sections of the book are devoted to blood flow sweating shivering heat transfer within the body and heat and mass transfer from skin and clothing to the environment Simple algebraic models

based on experimental data from a century of physiological investigation are developed for bodily processes The book offers an invaluable source of information for physiologists and physical scientists interested in quantitative approaches to the fascinating field of human thermoregulation

**A History of Science in the Netherlands** Klaas van Berkel, Albert van Helden, L.C. Palm, 2023-07-03 In the 400 years of its modern history the Netherlands has produced a distinguished array of eminent mathematicians scientists and medical researchers including many Nobel prize winners and other internationally recognised figures from Stevin Snel and Huygens in the 17th century to Lorentz Kammerlingh Onnes Buys Ballot De Vries de Sitter and Oort in the 19th and 20th centuries Yet it has often been noted that the history of science in the Netherlands is underrepresented in the international literature The handbook A History of Science in The Netherlands aims to correct this situation by providing a chronological and thematic survey of the field from the 16th century to the present essays on selected aspects of science in the Netherlands and reference biographies of about 65 important Dutch scientists Written by more than 10 experts from Europe and North America the handbook is the standard English language reference work for the field

**Energy, the Subtle Concept** Jennifer Coopersmith, 2015-05-14 Energy is at the heart of physics and of huge importance to society and yet no book exists specifically to explain it and in simple terms In tracking the history of energy this book is filled with the thrill of the chase the mystery of smoke and mirrors and presents a fascinating human interest story Moreover following the history provides a crucial aid to understanding this book explains the intellectual revolutions required to comprehend energy revolutions as profound as those stemming from Relativity and Quantum Theory Texts by Descartes Leibniz Bernoulli d Alembert Lagrange Hamilton Boltzmann Clausius Carnot and others are made accessible and the engines of Watt and Joule are explained Many fascinating questions are covered including Why just kinetic and potential energies is one more fundamental than the other What are heat temperature and action What is the Hamiltonian What have engines to do with physics Why did the steam engine evolve only in England Why S klogW works and why temperature is IT Using only a minimum of mathematics this book explains the emergence of the modern concept of energy in all its forms Hamilton s mechanics and how it shaped twentieth century physics and the meaning of kinetic energy potential energy temperature action and entropy It is as much an explanation of fundamental physics as a history of the fascinating discoveries that lie behind our knowledge today

**Cultural Transfer through Translation** ,2010-01-01 Given that the dissemination of enlightened thought in Europe was mostly effected through translations the present collection of essays focuses on how its cultural adaptation took place in various national contexts For the first time the theoretical model of cultural transfer Espagne Werner is applied to the eighteenth century The intercultural dynamics of the Enlightenment become manifest in the transformation process between the original and target cultures be it by way of acculturation creative enhancement or misunderstanding Resulting in shifts of meaning translations offer a key not just to contemporary translation practice but to the discursive network of the European Enlightenment in general The case studies united here

explore both how translations contributed to the transnational standardisation of certain key concepts values and texts and how they reflect national specifications of enlightened discourses Hence the volume contributes to Enlightenment studies at least as much as to historical translation studies      *Affinity, That Elusive Dream* Mi Gyung Kim,2008-01-25 In the eighteenth century chemistry was transformed from an art to a public science Chemical affinity played an important role in this process as a metaphor a theory domain and a subject of investigation Goethe s *Elective Affinities* which was based on the current understanding of chemical affinities attests to chemistry s presence in the public imagination In *Affinity That Elusive Dream* Mi Gyung Kim restores chemical affinity to its proper place in historiography and in Enlightenment public culture The Chemical Revolution is usually associated with Antoine Laurent Lavoisier who introduced a modern nomenclature and a definitive text Kim argues that chemical affinity was erased from historical memory by Lavoisier s omission of it from his textbook She examines the work of many less famous French chemists including physicians apothecaries metallurgists philosophical chemists and industrial chemists to explore the institutional context of chemical instruction and research the social stratification that shaped theoretical discourse and the crucial shifts in analytic methods Apothecaries and metallurgists she shows shaped the main theory domains through their innovative approach to analysis Academicians and philosophical chemists brought about two transformative theoretical moments through their efforts to create a rational discourse of chemistry in tune with the reigning natural philosophy The topics discussed include the corpuscular Cartesian model in French chemistry in the early 1700s the stabilization of the theory domains of composition and affinity the reconstruction of French theoretical discourse in the middle of the eighteenth century the Newtonian languages that plagued the domain of affinity just before the Chemical Revolution Guyton de Morveau s program of affinity chemistry Lavoisier s reconstruction of the theory domains of chemistry and Berthollet s path as an affinity chemist      *Physics in Minerva's Academy* Steffen Ducheyne,2025-01-27 This monograph explains how in the aftermath of the battle over Ren Descartes philosophy Newton s natural philosophy found fertile ground at the University of Leiden Newton s natural philosophical views and methods along with their underlying distinctions seamlessly aligned with the University of Leiden s institutional religious policy which urged professors and students to separate theology from philosophy Additionally these views supported the natural philosophical agendas of Herman Boerhaave Willem Jacob s Gravesande and Petrus van Musschenbroek Newton s natural philosophical program was especially useful in the three Leiden professors project of reforming existing disciplines and providing them with epistemic legitimacy      *The Letters from Gerrit Jan Mulder to Justus Liebig (1838-1846)* ,2025-01-27      **Simulation in Healthcare Education** Harry Owen,2016-03-05 Simulation in healthcare education has a long history yet in many ways we have been reinventing the wheel during the last 25 years Historically simulators have been much more than simple models and we can still learn from aspects of simulation used hundreds of years ago This book gives a narrative history of the development of simulators from the early 1700s to the middle of the 20th

century when simulation in healthcare appeared to all but die out It is organized around the development of simulation in different countries and includes at the end a guide to simulators in museums and private collections throughout the world The aim is to increase understanding of simulation in the professional education of healthcare providers by exploring the historical context of simulators that were developed in the past what they looked like how they were used and examples of simulator use that led to significant harm and an erosion of standards The book is addressed to the healthcare simulation community and historians of medicine The latter in particular will appreciate the identification and use of historic sources written in Latin German Italian French Polish and Spanish as well as English Cohesion J. S. Rowlinson, 2005-06-30 Why does matter stick together Why do gases condense to liquids and liquids to solids This book provides a detailed historical account of how some of the leading scientists of the past three centuries have tried to answer these questions The topic of cohesion and the study of intermolecular forces has been an important component of physical science research for hundreds of years This book is organised into four broad periods of advances in our understanding The first three are associated with Newton Laplace and van der Waals The final section gives an account of the successful use in the twentieth century of quantum mechanics and statistical mechanics to resolve most of the remaining problems The book will be of primary interest to physical chemists and physicists as well as historians of science interested in the historical origins of our modern day understanding of cohesion *Instruments in Art and Science* Helmar Schramm, Ludger Schwarte, Jan Lazardzig, 2014-08-29 This volume presents a collection of original papers at the intersection of philosophy the history of science cultural and theatrical studies Based on a series of case studies on the 17th century it contributes to an understanding of the role played by instruments at the interface of science and art The papers pursue the hypothesis that the development and construction of instruments make a substantive contribution to the opening of new fields of knowledge the development of new cultural practices but also to the delineation of particular genres methods and disciplines This perspective leads the authors to reflect anew on what actually defines an instrument and to develop a series of basic questions to determine what an instrument is which actions does the instrument incorporate which actions does the instrument make possible when do the objects of examination themselves become instruments what skills are required to use an instrument which skills does it produce With its combination of new theoretical models and historical case studies its detailed demonstration of the mutual influence of art and science with the instrument as the point of intersection this volume enters new territory It is of great value for all those interested in the history of our perception of instruments Besides the editors the authors of the papers are J rg Jochen Berns Olaf Breidbach Georges Didi Huberman Peter Galison Sybille Kr mer Dieter Mersch Hans J rg Rheinberger Wilhelm Schmidt Biggemann and Otto Sibum **Beyond Measure: The Hidden History of Measurement from Cubits to Quantum Constants** James Vincent, 2022-11-01 Finalist for the Los Angeles Times Book Prize for Science Technology Named a Best Book of the Year by The New Yorker and The Economist Quietly thrilling The story of humans measuring things is no less

than the story of civilization Jennifer Szalai New York Times Book Review A vibrant account of how measurement has invisibly shaped our world from ancient civilizations to the modern day From the cubit to the kilogram the humble inch to the speed of light measurement is a powerful tool that humans invented to make sense of the world In this revelatory work of science and social history James Vincent dives into its hidden world taking readers from ancient Egypt where measuring the annual depth of the Nile was an essential task to the intellectual origins of the metric system in the French Revolution and from the surprisingly animated rivalry between metric and imperial to our current age of the quantified self At every turn Vincent is keenly attuned to the political consequences of measurement exploring how it has also been used as a tool for oppression and control Beyond Measure reveals how measurement is not only deeply entwined with our experience of the world but also how its history encompasses and shapes the human quest for knowledge

**Difference and Disease** Suman Seth,2018-06-07 Suman Seth reveals how histories of medicine empire race and slavery intertwined in the eighteenth century British Empire

**Inventing Chemistry** John C. Powers,2020-03-04 The story of this little known Dutch physician will interest students and practitioners of history chemistry and philosophy of science Choice In Inventing Chemistry historian John C Powers turns his attention to Herman Boerhaave 1668 1738 a Dutch medical and chemical professor whose work reached a wide educated audience and became the template for chemical knowledge in the eighteenth century The primary focus of this study is Boerhaave s educational philosophy and Powers traces its development from Boerhaave s early days as a student in Leiden through his publication of the *Elementa chemiae* in 1732 Powers reveals how Boerhaave restructured and reinterpreted various practices from diverse chemical traditions including craft chemistry Paracelsian medical chemistry and alchemy shaping them into a chemical course that conformed to the pedagogical and philosophical norms of Leiden University s medical faculty In doing so Boerhaave gave his chemistry a coherent organizational structure and philosophical foundation and thus transformed an artisanal practice into an academic discipline Inventing Chemistry is essential reading for historians of chemistry medicine and academic life

**National Library of Medicine Current Catalog** National Library of Medicine (U.S.), *Historical Dictionary of the Netherlands* Joop W. Koopmans,Arend H. Huussen Jr.,2007-05-22 The Netherlands frequently but erroneously called Holland is one of the most densely populated countries in the world In the past few decades it has been undergoing many transformations made possible by its dynamic and fast moving political landscape It has shifted from fierce nationalism toward a self image of tolerance and permissiveness the national identity and self consciousness has slowly eroded through decolonization and immigration Unfortunately several murders of prominent controversial politicians have started yet another shift away from tolerance and economic stagnation has bred pessimism Nonetheless despite many trials and tribulations there has been real progress and the Dutch have perhaps done a better job of coming to terms with their limitations than many others in the world The second edition of the *Historical Dictionary of the Netherlands* contains more than 700 cross referenced dictionary entries on individual topics

spanning the Netherlands political economic and social system along with short biographies on important figures who have shaped the Netherlands history Supplementing the entries are a list of acronyms and abbreviations a chronology an introduction appendixes and a bibliography making this a superb quick reference on the Netherlands
