**Statistical Diagnostics of Electric Power Equipment** Vitalii Babak, Sergii Babak, Artur Zaporozhets, 2024-11-25  
This book considers the issues of constructing mathematical probabilistic models of diagnostic signals the development of statistical methods of their analysis in order to make diagnostic decisions and finally the technical implementation of the proposed diagnostic methods Following the concept of primacy of the mathematical model of the diagnostic signal the authors considered it expedient to consider first of all the questions connected with the theory of random processes possessing infinitely divisible distribution laws linear and linear periodic random processes Considerable attention is paid to the issues of simulation modeling of diagnostic signals and their statistical evaluation Modern element base and new information technologies allowed to develop build and practically test a number of experimental samples of information measuring systems of statistical diagnostics of electric power engineering objects Among these IMS the systems are realized by means of unmanned diagnostic complexes and also IMS of vibrodiagnostics of moving units of electric machines represents an important role A large amount of experimental research has shown the operability and efficiency of the built IMS samples Particular attention is paid to the selection of diagnostic spaces formation of training sets construction of solving rules for diagnosis and classification of EE defects The authors do not pretend to a comprehensive consideration of the issues of EE diagnostics using statistical methods and IMS realized on their basis At the same time the results of researches stated in this monograph were a natural continuation of the subject of application of statistical methods in the field of control monitoring and diagnostics for objects of electric power industry

**Pre-failure Deformation Behaviour of Geomaterials** R. J. Jardine, 1998 In the past fifteen years experimental and theoretical characterisation of the pre failure deformation properties of geomaterials has developed enormously In recognition of these important research developments a Geotechnique Symposium in Print SIP was held at the Institution of Civil Engineers in 1997 This volume brings together the nineteen Geotechnique SIP papers which summarise the recent developments in measuring and understanding the pre failure stress strain time properties of natural soils and apply this information to practical engineering problems

*Failure Modes, Effects and Causes of Microbiologically Influenced Corrosion* Reza Javaherdashti, Farzaneh Akvan, 2019-10-22 Failure Modes Effects and Causes of Microbiologically Influenced Corrosion Advanced Perspectives and Analysis presents academic research about microbial corrosion MIC integrating it into engineering applications that result in a more thorough understanding of MIC and how it is recognized and treated In addition new concepts that will be useful in understanding integrity and corrosion management practices are explored This book will be useful for industry professionals particularly maintenance and operation engineers corrosion and material engineers and R D personnel working in the field of corrosion protection Focuses on the skills and knowledge necessary to understand how Failure modes and why Effects and Causes materials fail Explains why corrosion control measures such as the use of coatings cathodic protection and inhibitors are

useful Discusses the practical side of MIC treatment in terms of fundamental concepts of time and cost of operation **Lees' Loss Prevention in the Process Industries** Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field **Pathophysiology, Risk Factors, and**

**Management of Chronic Heart Failure** Ram B. Singh, Jan Fedacko, Krasimira Hristova, Galal Eldin Nagib Elkilany, 2024-04-04 Chronic Heart Failure Pathophysiology Risk factors and Mechanisms is the first of two separate but closely related volumes which aim to provide an inclusive overview on Chronic Heart Failure CHF This first volume is focused on the epidemiology classification molecular mechanisms pathophysiology causes identification and interactions of heart failure It will explain the uncertainties and issues in Heart Failure by helping readers understand the physiopathology of CHF in the light of behavioural risk factors 2D and 3D speckle tracking echocardiography have been used to quantify regional alterations of longitudinal strain and area strain through their polar projection which allows a further evaluation of both the site and extent of myocardial damage The analysis of strain can identify subclinical cardiac failure myocyte remodelling which is a major issue in CHF Myocardial Strain measure by speckle tracking echocardiography is frequently attenuated in these conditions and can be utilized for the evaluation of disease progression and the effect of therapeutic interventions as well as prevention because it could be a manifestation of behavioural risk factors These 2 separate volumes serves as essential references to both researchers and practicing clinicians proposing novel methods of research by using behavioural and environmental risk factors as intervention agent as well as discussing deficiency in the present approaches in

management of HF and proposing new methods of early diagnosis and therapies for the clinical management of CHF Includes a number new and controversial topics Roles of both behavioural and nutritional risk factors in CHF considering behavioural intervention which may change the remodelling as well as nutrient supplementation or change of diet in preventing CHF or converting resistant HF in to HF responding to therapy Evidence based knowledge on CHF with an emphasis on viewing CHF as a disease of the brain and contribution from other systems Pre Heart failure which can be prevented to restore normal cardiomyocyte function Pathogenesis of HF in chronic kidney disease 2D and 3D speckle tracking echocardiography Includes never published tables and figures to aid understanding of the topics Contributions from international leading experts in the field written with the aim of serving both researchers and practicing clinicians

Burkly, Timothy S. Zheng, John Silke, 2016-01-21 The immune system mediates tissue responses under both physiological and pathological conditions impacting the inflammatory fibrogenic and regenerative components In addition to various leukocyte subsets it is now recognized that epithelial endothelial and other non hematopoietic tissue cell types actively contribute to the interplay shaping tissue responses Further understanding the molecular pathways and mechanisms mediating these tissue responses is of great interest In the past decade TNF like weak inducer of apoptosis TWEAK and its receptor FGF inducible molecule 14 Fn14 members of the TNF TNFR superfamily have emerged as a prominent molecular axis regulating tissue responses Generally leukocyte derived TWEAK signals through Fn14 which is highly induced in injured and diseased tissues on the surface of parenchymal stromal and progenitor cells thereby orchestrating a host of tissue shaping responses including

inflammation angiogenesis cell proliferation or death and the regulation of progenitor cells Compelling preclinical results indicate that whereas transient TWEAK Fn14 activation promotes productive tissue responses after acute injury excessive or persistent TWEAK Fn14 activation drives pathological tissue responses leading to progressive damage and degeneration in target organs of injury autoimmune and inflammatory diseases and cancer Given that the highly inducible pattern of Fn14 expression is well conserved between mouse and man the role of TWEAK Fn14 in human disease is an area of intense investigation Recent findings have also begun to shed light on how the TWEAK Fn14 pathway fits into the immune network interplaying with other well established pathways including TNFa IL 17 IL 13 and TGFb in regulating tissue responses The noncanonical nuclear factor kB NF B pathway plays a role in immunity and disease pathologies and appears to be activated by only a subset of TNF TNFR superfamily members Of the various signaling pathways downstream of TWEAK Fn14 particular attention has been placed on the noncanonical NF B pathway given that given that TWEAK induces acute activation of canonical NF B but prolonged activation of noncanonical pathway Thus dovetailing of the TWEAK Fn14 axis with noncanonical NF B pathway activation may be a key mechanism underlying tissue responses Also of great interest is a deeper understanding of where when and how tissue responses are regulated by other TNF TNFR superfamily members that can signal through noncanonical NF B This Research Topic issue will cover 1 TWEAK Fn14 pathway biology role in tissue responses injury and disease pathogenesis 2 Role of noncanonical NFkB signaling cascade in tissue responses 3 Translational studies of relevance of TWEAK Fn14 and noncanonical NFkB in human disease 4 Other TNF superfamily members signaling through noncanonical NFkB in the regulation of tissue responses 5 Reviews and Perspectives on the above

**Pathophysiology of Shock, Sepsis, and Organ Failure** Günther Schlag,Heinz Redl,2012-12-06 In this book current knowledge of the pathophysiology of shock sepsis and multi organ failure is presented The rapid progress which has been made and the results achieved in intensive care medicine are based on sound basic research which is duly reflected in these chapters Multiorgan failure is the foremost cause of postoperative and posttraumatic death and many complex mechanisms are involved Only with a good foundation of basic research can abnormalities in the physiological biochemical and morphological course of shock be recognized and the necessary conclusions for treatment drawn Therapy must proceed from profound knowledge of the multi variant physiological events in order to influence shock sepsis and organ failure Although numerous possibilities for therapy have arisen from pharmaceutical research in recent years they are beyond the scope of this book and are not discussed here To gain a better understanding of the pathophysiological events it was necessary to examine and to describe different models that simulate and reproduce these events Here we describe the

causative agents shock and the consequences sepsis organ failure in two main sections divided on the basis of their pathophysiology

**The Symbolic Uses of Politics** Murray Jacob Edelman, 1985 The symbolic manifestations purposes and uses of politics are revealed in this provocative analysis of the institution of politics and man as a political animal Unlike the conventional study of politics that deals with how people get the things they want through government this book concentrates on how politics influence what they want what they fear and what they regard as possible In examining politics as a symbolic form it looks at man and politics as reflections of each other
