Woods, 2012-12-06 Recent years have seen a rapid increase in the use of enzymes as food processing tools as an understanding of their means of control has improved Since publication of the first edition of this book many new products have been commercially produced and the corresponding number of published papers has swollen This second edition has been fully revised and updated to cover changes in the last five years It continues to provide food technologists chemists biochemists and microbiologists with an authoritative practical and detailed review of the subject

Artificial Cells Thomas Ming Swi Chang, 2007 This is the first book that provides a comprehensive review of the entire area of artificial cells The author a pioneer of the field invented the first artificial cells some 50 years ago and has continued to carry out active research in this field Since then there have been explosive research activities around the world on artificial cells especially in fields related to biotechnology nanomedicine cell therapy blood substitutes drug delivery and others However instead of the term artificial cells many authors use other terminologies such as blood substitutes bioencapsulation liposomes nanoparticles and so on Furthermore papers in this highly interdisciplinary area are published in numerous journals specializing in chemistry medicine surgery bioengineering and others while books in this area are mostly multi authored describing very specific and narrow areas As a result any meaningful literature search for a complete idea of the present status of the whole

field of artificial cells is impossible This monograph is written to fill this gap by including all those areas in artificial cells that are disguised under different terminologies Each chapter begins with a detailed overview followed by detailed examples of the author's own research and a full description of his methods and procedures Readers interested in a detailed overview of the whole area can read from cover to cover omitting the methods section at the end of each chapter while those entering this area of research will find the detailed methods and procedures very useful

Fisheries Processing A.M.

Martin, 2012-12-06 The fish processing industry is still far from the levels of scientific and technological development that characterize other food processing operations It has also been slow in finding uses for by products and processing wastes compared with the meat and poultry industries The utilization of fisheries by products or wastes constitutes an area in which the application of modern techniques could potentially improve profitability At present increased attention is being focused on the application of new biotechnological methods to operations related to the seafood industry with the objective of increasing its general efficiency Because fish processing operations are commonly carried out in the vicinity of the sea most of the resulting fish wastes have been disposed of by returning them to it Pollution control measures and a better understanding of the valuable composition of the products extracted from the sea are expected to encourage their recovery and the development of new products from them In the past fisheries wastes and species not used for food have been generally utilized through technological processes with a low level of sophistication such as those for the production of animal feed and fertilizer Limited economic success has accompanied the application of physical and chemical processes for the recovery of non utilized fisheries biomass and for the production of quality products from them
