Eosinophil Ultrastructure Rossana C.N. Melo, Ann M. Dvorak, Peter F. Weller, 2023-01-05 Eosinophil Ultrastructure Atlas of Eosinophil Cell Biology and Pathology entirely focuses on eosinophils and their functional roles in inflammation host defense and normal homeostatic activities The book explores the ultrastructure of human eosinophils highlighting biological processes observed under normal experimental and pathological conditions Created to fill a void in the eosinophil literature the book includes an extensive array of electron microscopic images that illustrate the diversity of eosinophil morphology While the atlas is a learning and teaching tool it is mainly a helpful resource for researchers to identify distinguishing features and structural changes that arise during studies of human eosinophils The book also covers the ultrastructure of mouse eosinophils under normal and activation conditions and in the context of representative diseases Gives guidelines to understand the human eosinophils in studies focused on structural biology cellular immunology innate and adaptive immunity immune responses to pathogens immunopathology and inflammatory responses Provides a core of essential knowledge to identify both immature and mature eosinophils Comprises a representative compilation of the eosinophil ultrastructure during biological processes such as activation and degranulation mostly under experimental conditions Highlights eosinophil biological processes found in vivo during human diseases thus

Ribonucleases Giuseppe D'Alessio, James F. Riordan, 1997-02-11 Pancreatic ribonuclease the focus of highly productive scientific research for more than half a century and the only enzyme to be the basis of four Nobel prizes has recently undergone a resurgence in popularity for the recognition of an extended ribonuclease superfamily with functions ranging from tumour growth and inhibition to self recognition and neurotoxicity This volume highlights the functional diversity of ribonucleases and reveals the emerging research opportunities provided by these enzymes Never before has discussion of the entire family of ribonucleases and related enzymes been covered in a single volume Core chapters focus on the latest structures and functions of pancreatic type ribonucleases Structures and functions of intracellular ribonucleases and nondigestive members of the family are also covered How ribonucleases continue to serve as excellent systems with which to uncover the secrets of protein chemistry is demonstrated **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1992 Current Catalog National Library of Medicine (U.S.), 1993-04 **Diagnostic**

Immunopharmacology of Respiratory

System Stephen T. Holgate, 1995-10-18 Immunopharmacology represents the boundary between the immune system and chemical mediators of the inflammatory and neuroendocrine responses The subject as applied to the respiratory system embraces most of the common non malignant lung diseases of which asthma and allied disorders are the most prevalent An understanding of the underlying mechanisms of the disorders provides rationale for prevention and drug treatment as well as creating opportunities for novel drug development Immunopharmacology of Respiratory System embraces all of these principles and should enable the reader to become rapidly updated in an area of medical importance Focuses on aspects of disease pathogenesis that are common to a variety of lung disorders Includes coverage of the mechanisms of asthma origin progression and novel therapeutic interventions This volume is another in the Systems section of the Handbook of Immunopharmacology

Diagnostic Ultrastructural Pathology Ann M. Dvorak, Rita A. Monahan-Earley, 1995-05-15

Diagnostic Ultrastructural Pathology Volumes II and III presents individual problem based cases in a well illustrated format using numerous electron micrographs to convey appropriate and necessary visual information for the diagnosis of human disease The format facilitates the teaching of the case approach for diagnostic ultrastructural pathology using clinical ultrastructural pathologic correlation These guides illustrate key reasoning processes that physicians use to resolve individual clinical problems through the use of electron microscopy The material is useful to a wide variety of physicians and students of medicine structure and disease at various levels of training as well as in the training of and operational use by technical support staff The two volumes include a total of 50 cases and a procedural guide for the ultrastructural pathology laboratory The cases were selected using four principal criteria 1 classic cases which are diagnosed readily by light microscopy to facilitate the electron microscopic diagnosis of less classic cases 2 diagnostic cases for which ultrastructural analysis is essential for diagnosis 3 supportive cases where either the light or the electron microscopic diagnosis is supportive and thus confirmatory of the other and 4 new facts cases which establish new knowledge regarding the pathogenesis of disease using electron microscopy as the investigative modality The 50 cases are grouped anatomically in four major categories Volume II contains the sections on the respiratory and nervous systems and Volume III presents the cases dealing with the endocrine and hematopoietic systems Each section is preceded by introductory remarks Each case cites relevant classic anatomic pathology papers and related research papers These volumes also include multiple functional indices providing ready access to the material from several starting points There are separate indices for presenting symptoms differential diagnostic groups ultrastructural pathology criteria and final diagnostic categories As a valuable
