PHS-supported Research ,1991 Journal of the National Cancer Institute ,2010 Cancer and Nutrition Roslyn B. Alfin-Slater,David Kritchevsky,2013-11-11 The role of nutrition in neoplasia has been of longstanding concern The subject was addressed by investigators in the first decade of this century but was dropped Vigorous attention was paid to this area of oncology in the 1940s primarily due to the efforts of Dr A Tannenbaum at the Michael Reese Hospital in Chicago and the group at the University of Wisconsin in Madison However interest waned again until the 1970s when the question of diet and cancer was addressed and it has since been at the forefront of cancer research The present volume 7 of Human Nutrition A Comprehensive Treatise summarizes current knowledge in the area of nutrition and cancer The first chapter is an overview written by John Higginson whose contribution to understanding of cancer and nutrition spans several decades The next essays cover epidemiology and physiology The ensuing chapters address in turn those dietary factors relating to nutrition and cancer namely carbohydrates protein fat cholesterol calories lipotropics fiber fruits and vegetables vitamins and alcohol In a field moving as rapidly as this one is now we can expect to miss a few late breaking developments but generally the literature has been well covered through some time in 1988 Work relating to the effects of diet on oncogenes is in its very early development and has not been addressed as an entity per se **Epidemiology and Demography in Public Health** Japhet Killewo,Kristian Heggenhougen,Stella R. Blackburn,Vay Liang W. Go,John Milner,2011-05-02 Nutritional oncology is an increasingly active interdisciplinary field where cancer is investigated as both a systemic and local disease originating with the changes in the genome and progressing through a multi step process which may be influenced at many points in its natural history by nutritional factors that could impact the prevention of cancer the quality of life of cancer patients and the risk of cancer recurrence in the rapidly increasing population of cancer survivors Since the first edition of this book was published in 1999 the idea that there is a single gene pathway or single drug will provide a cure for cancer has given way to the general view that dietary environmental factors impact the progression of genetic and cellular changes in common forms of cancer This broad concept can now be investigated within a basic and clinical research context for specific types of cancer This book attempts to cover the current available knowledge in this new field of nutritional oncology written by invited experts This book attempts to provide not only the theoretical and research basis for nutritional oncology but will

offer the medical oncologist and other members of multidisciplinary groups treating cancer patients practical information on nutrition assessment and nutritional regimens including micronutrient and phytochemical supplementation The editors hope that this volume will stimulate increased research education and patient application of the principles of nutritional oncology
