Epidemiology Of Cerebrovascular Disease:

Epidemiology of Cerebrovascular Disease John F. Kurtzke, 2012-12-06 This work started out quite modestly as an investigation into the geographic distribution of cerebrovascular disease But one question soon led to another and it just grew like Topsy In fact it is hard to characterize precisely what this should be called It is in part a Review of the Literature in part a critique and reworking of other publications and in part a standard view of stroke epidemiology in the more restricted sense of attack and mortality rates and distribution Still the result would I hope provide a synthesis of the population features of stroke as they appear to me at this time a highly individual interpretation of the state of the art I have studiously avoided any survey of the history of cerebrovascular disease and citations are for those of most recent vintage appropriate to the situation Literature in this field continues to burgeon my references end with the Fall of 1967 When counting noses we must have numbers so the reader will find a massive compilation of tables They are however necessary especially since so many of my statements seem to fly in the face of current orthodoxy whether lay or medical With the data one may decide for himself their validity Insofar as possible tables have been placed in the appendix Unless an author is directly quoted by me all interpretations of his data are my own and he should be held blameless

Risk Factors for Cerebrovascular Disease and Stroke Sudha Seshadri, Stéphanie Debette, 2016 This book by leading stroke researchers from Europe and North America describes environmental and genetic risk factors for cerebrovascular disease The section on genetics is exceptionally detailed and contemporaneous Risk Factors for Cerebrovascular Disease and Stroke will be especially useful to clinicians at all levels researchers and public health professionals interested in primary prevention of stroke
