Lilienfeld, 1969      **American Journal of Epidemiology**, 1985      **Epidemiology of Neurologic and Sense Organ Disorders** Leonard T. Kurland, John F. Kurtzke, Irving D. Goldberg, 1973 This is the first book length treatment of the frequency and distribution of neurologic and sense disorders It is based primarily on special tabulations of mortality data for 1959 1961 applied to the U S census of 1960 Information on incidence prevalence and survivorship is provided for each major disorder and a summary chapter considers the frequency and geographic distribution of neurologic disorders in terms of age sex color and demographic characteristics      **Comparative, Maternal, and Epidemiologic Aspects** James Wilson, 2013-03-09 Modification of embryonic development by genetic differences in the mother is a well recognized phenomenon but little is known about the genetics of these maternal traits or the mechanisms by which they act To illustrate the genetic approach to the problem examples are given of how differences in embryonic response to a teratogen can be partitioned into those resulting from differences in embryonic genotype including the possible role of X linked genes in producing reciprocal cross differences maternal genotype and cytoplasmically transmitted factors The advantages and limitations of analysis by appropriate crosses in utero treatments embryo transfers and in vitro experiments are illustrated The numerous inbred strains of the mouse with well documented physiology the recently developed recombinant inbred strains and the existence of easily identified biochemical marker genes offer attractive opportunities so far largely unexploited for causal analysis of maternal effects on teratological responses VII ADDENDUM Since this chapter was written several relevant papers have appeared The strain difference between AI and C57BU6 mice in frequency of cleft palate response to cortisone was fitted to a model of normally distributed log tolerance Biddle and Fraser 1976 Genetic differences both in maternal uterine environment and embryonic response can be represented in terms of their effect on the median effective dose required for the cleft palate response The maternal effect of AI dams relative to C57BU6 dams caused a two fold reduction in embryonic tolerance to cortisone induced cleft palate      Clinical Perspectives in the Management of Down Syndrome Susan van Duyne, Don C. Van Dyke, David J. Lang, M. Joan Soucek, Frances Heide, 2012-12-06 The management of and attitudes toward children and adults with Down syndrome have undergone considerable changes in the course of the condition's long history Zellweger 1977 1981 Zellweger and 2 Down also erred by assuming that Down syndrome represented regression to an ethnic variant of lower cultural standing Such an interpretation might have been

understandable at a time when the myth of Anglo Saxon superiority was widely accepted by the British Charles Darwin's then highly acclaimed theory of origin of the species may have contributed to such a concept

**Issues and Reviews in Teratology** H. Kalter, 2012-12-06 Why Efforts to Expand the Meaning of Teratogen Are Unacceptable Disagreement about nomenclature in teratology is not new Dissent even about the very fabric of the discipline what congenital malformations consist of has often been voiced Time instead of resolving such difficulties has sometimes worsened them For example in the past it was agreed that congenital malformations are abnormalities of structure present at birth but differences of opinion concerning where the line between normal and abnormal was to be drawn prevailed It was obvious that in order to discover the causes of congenital malformations and cast strategies for their prevention it would be necessary to have knowledge of the baseline of their frequency and that this required uniformity of definition of terms Since malformations of primary social concern are those having grave outcomes and are paradoxically also the commonest ones it is logical that such conditions were the first consideration of investigators and were the defects whose frequency was considered to comprise the required baseline

**Epidemiology of Congenital Malformations** Ernest George Knox, R. J. Lancashire, 1991 Based upon material recorded in the Birmingham Births Register and the Birmingham Malformations Register over the years between 1964 and 1984 this text offers an analysis of congenital malformations occurring in Birmingham
