ARNOLD, 2013-12-01 As a five year old I encountered a picture of a young man in a rakish hat and a yellow coat on the wall of a large classroom There was something instantly intriguing about the image but it was also puzzling because it represented neither politician nor prince the usual fare for Australian school decorations I was eventually told that this was a reproduction of a painting the artist was Vincent van Gogh and that the subject was some young Frenchman On special days we assembled in that room and during the next several years I found myself gazing beyond visiting speakers at the fellow in the yellow jacket It was almost another fifty years before I felt properly conversant with the portrait and realized that van Gogh's subject Armand Roulin was seventeen at the time of the original painting and had died at seventy four during my schoolboy contemplations In the interim my enjoyment of the works of the Impressionists and Post Impressionists had grown and I occasionally ran into the name of Dr Gachet Vincent's last attending physician in books and catalog essays The doctor was my entree to the overlapping charms of medical and art histories In 1987 I had the good fortune to participate as a biochemist in the centenary celebration of the Pasteur Institut in Paris **The Midwives' Guide to Key Medical**

Maxwell,Shohreh B. Eckhardt,2012-12-06 This treatise had its origins in the authors strong opinion that the discovery of new drugs especially of innovative therapeutic agents really does not happen as a spontaneous sequel to investigative research no matter how penetrating such research may be Rather it seemed to us that the discovery of innovative therapeutic agents was a very active process existing in and of itself and demanding full attention it was not simply a passive dependent by process of investigative research And yet many researchers some close confreres of the authors others more distant believed otherwise We felt that their view reflected unrealistic thinking and that reality probably lay closer to what Beyer maintained We are taught to believe that if we can understand a disease it should be easy enough to figure out say the molecular configuration of a definitive receptor mechanism somewhere along the line and to design a specific drug And so we start out to understand the disease but never get around to doing much about therapy The authors very soon realized that there was essentially no quantitative information available on just where and how innovative therapeutic agents were discovered There were only anecdotal accounts and these were able to be selected and presented in ways that could be used to defend any point of view **The Medical Library Association Encyclopedic Guide to Searching and Finding Health**

### **Drug Toxicity in Embryonic Development II**

Robert J. Kavlock, George P. Daston, 2012-12-06 Having received the invitation from Springer Verlag to produce a volume on drug induced birth defects for the Handbook of Experimental Pharmacology we asked ourselves what new approach could we offer that would capture the state of the science and bring a new synthesis of the information on this topic to the world s literature We chose a three pronged approach centered around those particular drugs for which we have a relatively well established basis for understanding how they exert their unwanted effects on the human embryo We then supplemented this information with a series of reviews of critical biological processes involved in the established normal developmental patterns with emphasis on what happens to the embryo when the processes are perturbed by experimental means Knowing that the search for mechanisms in teratology has often been inhibited by the lack of understanding of how normal development proceeds we also included chapters describing the amazing new discoveries related to the molecular control of normal morphogenesis for several organ systems in the hope that experimental toxicologists and molecular biologists will begin to better appreciate each others questions and progress Several times during the last two years of developing outlines issuing

invitations reviewing chapters and cajoling belated contributors we have wondered whether we made the correct decision to undertake this effort
