Blind Eye: How the Medical Establishment Let a Doctor Get away with Murder

James B. Stewart

Simon and Schuster, £17.99,
pp 334
ISBN 0-671-04421-4

Rating: ★★

There is ample precedent for physicians flouting the Hippocratic admonition, "First, do no harm," and, directly or indirectly, accounting for multiple deaths. Dr Joseph Mengele's handiwork has been much documented; more vicariously, Dr Joseph Guillemin's immersion, died away with a fair number of folk, as did Dr Richard Gaillard's gun, which fired 350 shots a minute.

But Dr Michael Swango, the subject of this meticulously researched and highly readable book, was a fully fledged psychopath

who killed for the sheer thrill of it. And even though as many as 60 fatal poisonings could be attributed to him, his charm and glib persuasiveness allowed him to move on with impunity from one medical institution to another. As a medical student at Southern Illinois University, he became known as "Double-O Swango"—licensed to kill" after five patients under his care died mysteriously.

At each hospital, the huge cloud of suspicion that enveloped Swango was wafted away by physicians and administrators fearful of litigation and sullied reputations. Even today, he's serving a jail term not for murder but for possession of narcotics and fraud—and could be at large again soon.

That a blind eye could have been turned to Swango's persona and record is remarkable and somewhat chilling. He was fascinated by Nazism, the Holocaust, and serial and mass killers such as Jim Jones, the charismatic leader of the People's Temple, whose thousand-odd followers he persuaded to commit mass suicide in 1978. Swango kept a scrapbook of pictures of gory car crashes and collected an arsenal of weapons and an assortment of poisons in his apartments.

The cover up was worst at Ohio State University, the prestigious medical school where Swango was admitted to an internship. Despite a number of suspicious deaths

reported by nurses who had seen Swango enter the patients' rooms with a syringe, the administration dismissed the concerns as gossip and overreaction. Fearful of the public relations damage and possible loss of funding, they closed ranks ... and later refused any cooperation with Pulitzer Prize-winning author Stewart. In 1986 Swango's license to practise medicine was suspended when he went to prison for attempting to poison his coworkers, yet when he was released in 1987 he was able to enter a residency in internal medicine in South Dakota. Even though his past caught up with him there, he went on to secure a psychiatric residency in New York state, before fleeing to Zimbabwe, where he was again suspected of poisoning patients—and again dismissed. Incredibly, he moved on to practise in Zambia, where he was suspected and fired once again.

Stewart's is a cautionary tale calling for urgent and stringent legislation and improved reporting mechanisms so that checks on rogue physicians won't continue to be thwarted by fear of litigation and bad press, and by a closing of ranks and a suspension of belief by fellow doctors.

Growing up in Britain: Ensuring a Healthy Future for Our Children

BMA

BMA Books, £19.95, pp 221
ISBN 0 7279 1433 2

Rating: ★★

"The Chancellor has a much greater impact on health than the Secretary of State for Health, a thought that may well not cross the minds of either." This quote from Quick and Wilkinson dates from 1991, when a Conservative government was in power—one that produced the document *The Health of the Nation* with its emphasis on individual health behaviours. The present government exhibits more

"joined up thinking" (its own jargon) and acknowledges the connection between poverty, inequality, and poor health. Its green paper *Our Healthier Nation* (1998) rightly placed much greater emphasis on social inequalities. But will Labour deliver?

Growing up in Britain provides the ammunition to pressure the government to do so. This broad based and wide ranging book is a combination of the general and the specific matters covering many aspects of children's health, not just health care. It is a source of information and references not easily available elsewhere. Statistical relationships, causal relationships, and examples of projects and interventions are explored together with the evidence for their effectiveness.

Why do children from poor families consume such a lot of sweets, chips, fizzy drinks, milk, and white bread? Penny for penny, a chocolate bar provides more calories than carrots, even from a market stall. If the child refuses what is offered there may be no money in the budget for an alternative.

Effective programmes to improve children's diets are needed. If individual health education advice such as that offered by specially trained health visitors to increase

children's iron intake makes no difference, then there may be a case for follow on formula to be routinely supplemented with iron or for a US style WIC (women, infants, children) welfare programme to be introduced here. We need to know both what is the most appropriate target—perhaps reducing salt or fat intake is more important medically in the long term—and what can be successfully implemented.

A separate chapter about the health problems of children from ethnic minorities would have been welcome. As well as suffering disproportionately from poverty, they may face particular problems of racism, language barriers, and certain diseases. Refugee children may have witnessed or been subjected to horrific violence. The newly fashionable "joined up" approach to support them might be just the ticket.

This is a wonderful source book, which is excellently referenced and should be read and referred to by all those concerned for the health and wellbeing of children in this country.
