Epistemic Logic In The Later Middle Ages:

Epistemic Logic in the Later Middle Ages Ivan Boh, 2005-09-27 Epistemic Logic studies statements containing verbs such as know and wish It is one of the most exciting areas in medieval philosophy Neglected almost entirely after the end of the Middle Ages it has been rediscovered by philosophers of the present century This is the first comprehensive study of the subject Ivan Boh explores the rules for entailment between epistemic statements the search for the conditions of knowing contingent propositions the problems of substitutivity in intentional contexts the relationship between epistemic and modal logic and the problems of composite and divided senses in authors ranging from Abelard to Franchantian **Mind and**

Gabbay, John Woods, 2008-03-14 Starting at the very beginning with Aristotle s founding contributions logic has been graced by several periods in which the subject has flourished attaining standards of rigour and conceptual sophistication underpinning a large and deserved reputation as a leading expression of human intellectual effort It is widely recognized that the period from the mid 19th century until the three quarter mark of the century just past marked one of these golden ages a period of explosive creativity and transforming insights It has been said that ignorance of our history is a kind of amnesia concerning which it is wise to note that amnesia is an illness It would be a matter for regret if we lost contact with another of logic s golden ages one that greatly exceeds in reach that enjoyed by mathematical symbolic logic This is the period between the 11th and 16th centuries loosely conceived of as the Middle Ages The logic of this period does not have the expressive virtues afforded by the symbolic resources of uninterpreted calculi but mediaeval logic rivals in range originality and intellectual robustness a good deal of the modern record The range of logic in this period is striking extending from investigation of quantifiers and logic consequence to inquiries into logical truth from theories of reference to accounts of identity from work on the modalities to the stirrings of the logic of relations from theories of meaning to analyses of the paradoxes and more While the scope of mediaeval logic is impressive of greater importance is that nearly all of it can be read by the modern logician with at least some prospect of profit The last thing that mediaeval logic is is a museum piece Mediaeval and Renaissance Logic is an indispensable research tool for anyone interested in the development of logic

including researchers graduate and senior undergraduate students in logic history of logic mathematics history of mathematics computer science and AI linguistics cognitive science argumentation theory philosophy and the history of ideas Provides detailed and comprehensive chapters covering the entire range of modal logic Contains the latest scholarly discoveries and interpretative insights that answer many questions in the field of logic Modal Syllogistics in the Middle Ages Henrik Lagerlund,2021-09-20 This book presents the first study of the development of the theory of modal syllogistic in the Middle Ages It traces the theory from the first medieval commentators on Aristotle s Prior Analytics to the end of the Middle Ages In the book several previously unstudied texts are analysed and the works of philosophers like Robert Kilwardby Albert the Great Richard of Campsall William of Ockham John Buridan Pseudo Scotus Albert of Saxony Marsilius of Inghen and Jodocus Trutfetter are studied These authors views on modal syllogistics are shown to comprise important insights clarifying central issues with implications for medieval philosophy in general The book will be of particular interest to historians of medieval philosophy and logic but also to anyone interested in the history of logic and Aristotelian philosophy

Medieval Thought David Edward Luscombe,1997 The Middle Ages span a period of well over a millennium from the emperor Constantine s Christian conversion in 312 to the early sixteenth century During this time there was remarkable continuity of thought but there were also many changes made in different philosophies various breaks revivals and rediscoveries David Luscombe s history of Medieval Thought steers a clear path through this long period beginning with three great influences on medieval philosophy Augustine Boethius and Pseudo Denis and focusing on Alcuin then Anselm Abelard Aquinas Ockham Duns Scotus and Eckhart amongst others from the twelfth to the fifteenth century Medieval philosophy is widely regarded as having a theological and religious orientation but more recently attention has been given to the early study of logic language and the philosophy of science This history therefore gives a fascinating insight into medieval views on aspects such as astronomy materialism perception and the nature of the soul as well as of God *Forms of the "medieval" in the "Renaissance"* George Hugo Tucker,2000 Explaining Knowledge Rodrigo Borges,Claudio de Almeida,Peter D. Klein,2017-11-24 The Gettier Problem has shaped most of the fundamental debates in epistemology for more than fifty years Before Edmund Gettier published his famous 1963 paper it was generally presumed that knowledge was equivalent to true belief supported by adequate evidence Gettier presented a powerful challenge to that presumption This led to the development and refinement of many prominent epistemological theories for example defeasibility theories causal theories conclusive reasons theories tracking theories epistemic virtue theories and knowledge first theories The debate about the appropriate use of intuition to provide evidence in all areas of philosophy began as a debate about the epistemic status of the Gettier intuition The differing accounts of epistemic luck are all rooted in responses to the Gettier Problem The discussions about the role of false beliefs in the production of knowledge are directly traceable to Gettier s paper as are the debates between fallibilists and infallibilists Indeed it is fair to say that providing a satisfactory response to

the Gettier Problem has become a litmus test of any adequate account of knowledge even those accounts that hold that the Gettier Problem rests on mistakes of various sorts This volume presents a collection of essays by twenty six experts including some of the most influential philosophers of our time on the various issues that arise from Gettier's challenge to the analysis of knowledge Explaining Knowledge sets the agenda for future work on the central problem of epistemology **A**

or theory of knowledge has always been one of the most important if not the most important field of philosophy New arguments are constantly brought to bear on old views new variants are marshalled to revive ancient stands new concepts and distinctions increase the sophistication of epistemological theories There are a great many excellent textbooks monographs as well as anthologies consisting of articles in epistemology Similarly there are useful philosophical dictionaries which contain a great number of relatively short entries and general philosophical handbooks which also touch epistemological issues This volume of 27 essays grew out from the interest to see a handbook which is devoted entirely to the historical roots and systematic development of theory of knowledge It is not intended to compete but to supplement the already existing literature It aims at giving both beginners and more advanced students as well as professionals in epistemology and other areas of philosophy an overview of the central problems and solutions of epistemology The essays are self contained and still often rather extensive discussions of the chosen aspects of knowledge The contributions presuppose very little familiarity with previous literature and only a few of them require the mastery of even elementary logical notation This we hope makes the volume also accessible to the philosophically interested wider audience The contributors were asked to provide substantial up to date self contained and balanced surveys of the various subareas and more specific topics of epistemology with reference to literature *Methods and Methodologies* Margaret Cameron, John Marenbon, 2010-11-26

This book examines the medieval tradition of Aristotelian logic from two perspectives The first examines the ways in which Latin and Arabic authors went about their work in medieval logic and how it was related to other intellectual branches The second invites critical comparison between contemporary and medieval approaches to logic The Unity of Science in the Arabic Tradition Shahid Rahman, Tony Street, Hassan Tahiri, 2008-07-15 the demise of the logical positivism programme The answers given to these questions have deepened the already existing gap between philosophy and the history and practice of science While the positivists argued for a spontaneous steady and continuous growth of scientific knowledge the post positivists make a strong case for a fundamental discontinuity in the development of science which can only be explained by extrascientific factors The political social and cultural environment the argument goes on determine both the questions and

the terms in which they should be answered Accordingly the sociological and historical interpretation involves in fact two kinds of discontinuity which are closely related the discontinuity of science as such and the discontinuity of the more inclusive political and social context of its development More precisely it explains the discontinuity of the former by the discontinuity of the latter subordinating in effect the history of science to the wider political and social history The underlying idea is that each historical and social context generates scientific and philosophical questions of its own From this point of view the question surrounding the nature of knowledge and its development are entirely new topics typical of the twentieth century social context reflecting both the level and the scale of the development of science

Logic and Humour in the Fables Roy Percy, 2007 A theoretically defensible inventory of the fables based on a new structural definition Joseph B. Dier's 1893 definition of the fables as funny stories in verse is still widely accepted as the best brief and general description for a heterogeneous collection of texts But the heterogeneity creates difficulties and at the periphery of the canon all three of the criteria included in B. Dier's definition are open to question The inventory proposed in the current study is based on a new structural definition a conjuncture akin to that of romance combining a logical episteme with a rhetorical narrative The episteme features a contradictory taken from Boolean algebra and assumes four different forms depending on whether ambiguity resulting from the contradictory is understood by neither by both or by either the sender or the receiver of a message In the first two instances a character foreign to the episteme intervenes to resolve confusion in the narrative or appears as the victim of the sophistical assumption of a contrary to fact reality in the latter instances the sender or the receiver of the message in the episteme triumphs in the narrative The resulting inventory including and augmenting the texts admitted by Per Nykrog and discarding numerous stories already challenged for authenticity is theoretically defensible to a degree not previously achieved ROY PERCY is an Honorary Research Fellow of the University of London

Reflecting Diversity Péter Losonczi, Géza G. Xeravits, 2007 The term interreligiosity is a characteristic invention of the postmodern discourse of religious studies But the feature it denotes the mutual connections between religions whereby they can share new viewpoints and paradigms is not modern at all One can say that religiosity and interreligiosity are correlative conceptions when speaking of religion as a social entity one is immediately and everywhere confronted by interreligious aspects The present volume contains various essays exploring such interreligious aspects found within the history and traditions of Judaism and Christianity
