Injury Saverio Bellusci, Mohammad K. Hajihosseini, 2022-03-29 *The Zebrafish: Disease Models and Chemical Screens* Monte Westerfield, Leonard I. Zon, 2011-09-23 This volume of *Methods in Cell Biology* is the 3e and provides comprehensive compendia of laboratory protocols and reviews covering all the new methods developed since 2004 This new volume on *Disease Models and Chemical Screens* covers two rapidly emerging and compelling applications of the zebrafish Details state of the art zebrafish protocols delineating critical steps in the procedures as well as potential pitfalls This volume concentrates on *Disease Models and Chemical Screens* *Molecular Mechanisms of Cilia Related Diseases* Joao Goncalves, Sara Carvalhal, Anne-Marie Tassin , Bruno Carmona, 2024-05-29 Eukaryotic cilia are evolutionarily conserved microtubule based structures that protrude from the cell surface In vertebrates multiple motile and primary immotile cilia fulfill sensory and motility functions that are critical for embryonic development and the homeostasis of adult tissues Cilia malfunction has been shown to cause a growing number of diseases presenting phenotypes such as brain and skeletal developmental problems intellectual disability blindness infertility obesity and kidney cysts Despite their clinical relevance we are still far from fully understanding the basic biology of these multiple cilia types For example we do not know the molecular compositions of all types of cilia nor how cilia structural and functional diversity is generated Also we are still identifying the genetic causes of ciliopathies and the impact of mutations on ciliary protein function cilia biogenesis maintenance ciliary functions and disease development Understanding all these aspects concerning vertebrate cilia will greatly contribute to the design of innovative therapeutic approaches for cilia related disorders Understanding the basic biology of vertebrate cilia is critical for the understanding of cilia related disorders However there are still many open questions about these organelles For example we do not know the proteomes and protein protein interaction networks specific of each cilium type Also the function of ciliary proteins is often studied mostly in vitro and in the context of primary cilia This limits our possibility to answer questions like why does a certain disease mutation affect only certain types of cilia in specific tissues Therefore this Research Topic aims to address these issues and focus on the latest findings on the basic biology of vertebrate cilia such as their molecular composition and biogenesis pathways and also on advances on our understanding of the molecular mechanisms of ciliopathies The goal of this Research Topic is to cover novel research focused on furthering our understanding on the molecular mechanisms underlying the development of cilia associated diseases Areas to be covered in this Research Topic may include but are not limited to Identification of novel cilia related diseases Genetic causes of ciliopathies Molecular mechanisms of disease and development of therapeutic approaches Molecular composition of vertebrate cilia Molecular mechanisms of vertebrate cilia biogenesis and multiple functions Original research articles as well as review articles are welcomed **Principles of Tissue Engineering** Robert Lanza, Robert Langer, Joseph P. Vacanti, Anthony Atala, 2020-03-26 Now in its fifth edition *Principles of Tissue Engineering* has been the definite resource in the field of tissue engineering for more than a decade The fifth edition provides an update on this rapidly progressing field

combining the prerequisites for a general understanding of tissue growth and development the tools and theoretical information needed to design tissues and organs as well as a presentation by the world's experts of what is currently known about each specific organ system As in previous editions this book creates a comprehensive work that strikes a balance among the diversity of subjects that are related to tissue engineering including biology chemistry material science and engineering among others while also emphasizing those research areas that are likely to be of clinical value in the future This edition includes greatly expanded focus on stem cells including induced pluripotent stem iPS cells stem cell niches and blood components from stem cells This research has already produced applications in disease modeling toxicity testing drug development and clinical therapies This up to date coverage of stem cell biology and the application of tissue engineering techniques for food production is complemented by a series of new and updated chapters on recent clinical experience in applying tissue engineering as well as a new section on the emerging technologies in the field Organized into twenty three parts covering the basics of tissue growth and development approaches to tissue and organ design and a summary of current knowledge by organ system Introduces a new section and chapters on emerging technologies in the field Full color presentation throughout
