Epsteinbarr Virus And Human Cancer:

Epstein-Barr Virus and Human Cancer K. Takada, 2012-12-06 In this book outstanding researchers from the US and Japan review recent progress in Epstein Barr virus research Most people carry EBV in memory B cells in a latent stage Many malignancies such as T NK cell lymphoma AIDS associated B cell lymphoma gastric carcinoma and Hodgkin s disease have been causally linked to EBV The development of molecular biology technique has allowed us to study the roles of individual EBV genes that act in the maintenance and disruption of EBV latency

Epstein-Barr Virus and Human Disease P. H. Levine, D. V. Ablashi, M. Nonoyama, G. R. Pearson, R. Glaser, 2012-12-06 Since its discovery as the cause of infectious mononucleosis in 1964 the Epstein Barr virus EBV has been etiologically implicated in an increasing number of human diseases Generally considered the first human oncogenic virus because of a number of studies linking it with Burkitt s lymphoma and nasopharyngeal carcinoma NPC as well as its documented oncogenicity in nonhuman primates EBV has served as a model for identifying subsequent candidate oncogenic viruses and the stimulus for Evans revision of the Henle Koch postulates to accommodate the problems in proving viral oncogenicity in humans Research on the role of EBV in human cancer was particularly enhanced a by the pioneering work of Werner and Gertrude Henle and b by the coordinated efforts of the Special Virus Leukemia Program and its successors the Special Virus Cancer Program and the Virus Cancer Program of the National Cancer Institute NCI Initiated by Dr Frank J Rauscher who subsequently became director of the NCI and is now Vice President of the American Cancer Society and expanded by Dr John B Moloney whose contributions to cancer research were honored at this Second International Symposium on EBV and Associated Malignant Diseases these NCI contract supported programs brought together investigators from all over the world to participate in a joint effort to unravel the mystery of EBV behavior and pathogenicity It was these programs that gave us the opportunity to work with such outstanding people as Professor Yohei Ito to whom this book is dedicated

Cancer Virus Dorothy H. Crawford, Ingólfur Johannessen, Alan B. Rickinson, 2014-02-27 The Epstein Barr virus EBV was discovered in 1964 At the time the very idea of a virus underlying a cancer was revolutionary Cancer is after all not catching Even now the idea of a virus causing cancer surprises many people But Epstein Barr named after its discoverers Sir Anthony Epstein and Dr Yvonne Barr is fascinating for other reasons too Almost everyone carries it yet it is only under certain circumstances that it produces disease It has been associated with different apparently unrelated diseases in different populations Burkitt s Lymphoma producing tumours in the jaw in African children a nasal tumour in China glandular fever in Europe and the USA and the majority of cases of Hodgkin s Disease

Lechien,Stéphane Hans,Francois Mouawad,2022-03-25 **The Molecular Basis of Human Cancer** William B. Coleman,Gregory J. Tsongalis,2016-11-11 This book covers the concepts of molecular medicine and personalized medicine Subsequent chapters cover the topics of genomics transcriptomics epigenomics and proteomics as the tools of molecular pathology and foundations of molecular medicine These chapters are followed by a series of chapters that provide overviews of molecular medicine as applied broadly to neoplastic genetic and infectious diseases as well as a chapter on molecular diagnostics The volume concludes with a chapter that delves into the promise of molecular medicine in the personalized treatment of patients with complex diseases along with a discussion of the challenges and obstacles to personalized patient care The Molecular Basis of Human Cancer Second Edition is a valuable resource for oncologists researchers and all medical professionals who work with cancer **The Association Between Viral Infection and Human Cancers** Ming Hu,Jinlin Li,Bin Wang,Chengjun Wu,2024-02-13 Research on the mechanisms of viral transformation and oncogenesis has laid the foundation for our current understanding of certain cancers For instance some oncogenes are activated or taken over by retroviruses and some viral proteins impair tumor suppressor gene functions Particular viruses from multiple virus families as well as unusual or unclassified viruses have been implicated in causing cancers through natural occurrence or experimentation on animals It is believed that 15% to 20% of all human cancer cases are linked to infections by one of seven viruses Epstein Barr virus hepatitis B virus hepatitis C virus human herpesvirus 8 human T cell lymphotropic virus type 1 human papillomaviruses and Merkel cell polyomavirus *The Epstein-Barr Virus* M. A. Epstein,B. G. Achong,2012-12-06 The Epstein Barr virus was discovered 15 years ago Since that time an immense body of information has been accumulated on this agent which has come to assume great significance in many different fields of biological science Thus the virus has very special relevance in human medicine and oncology in tumor virology in immunology and in molecular virology since it is the cause of infectious mononucleosis and also the first human cancer virus etiologically related to endemic Burkitt's lymphoma and probably to nasopharyngeal carcinoma In addition continuous human lymphoid cell lines initiated and maintained by the transforming function of the virus genome provide a laboratory tool with wide and ever growing applications Innumerable papers on the Epstein Barr virus have appeared over recent years and reports of work with this agent now constitute a veritable flood The present book provides the first and only comprehensive authoritative overview of all aspects of the virus by authors who have been the original and major contributors in their particular disciplines A complete and up to date survey of this unique and important agent is thus provided which should be of great interest to experts teachers and students engaged in cancer research virology immunology molecular biology epidemiology and cell culture Where topics have been dealt with from more

Epstein-Barr Virus and Human Disease • 1990 D. V. Ablashi, A. T. Huang, J. S. Pagano, G. R. Pearson, C. S. Yang, 2012-12-06 The Epstein Barr virus EBV isolated in 1966 continues to draw worldwide attention as an important human pathogen Its importance is largely related to the continuing accumulation of evidence that implicates EBV as an etiological factor for certain types of human cancer More recent investigations on this virus have focused on the identity of the viral genes responsible for the different disease manifestations observed following viral infection It is hoped that by thorough investigation of this virus clues to how cancer develops from a normal cell will surface In addition many of the gene products are now being exploited for the development of new and more sensitive tests for the diagnosis and clinical management of individuals with EBV associated diseases Thus studies on this virus continue to provide new information of importance to our understanding of the malignant process In an effort to attract both basic and clinical scientists to the same meeting for purposes of scientific exchange and fostering a closer interaction between these individuals a series of international symposia was initiated in 1984 The first meeting was held in Loutraki Greece and was attended by approximately 100 participants The second international symposium was held in St Petersburg Florida in 1986 and was attended by approximately twice as many participants as attended the Loutraki meeting **Research Awards Index** ,1989

Immunotherapy of Cancer Luigi Buonaguro, Sjoerd Van Der Burg, 2022-03-04 Cancer Vaccines as Immunotherapy of Cancer provides extensive and state of the art information about the meaning relevance and limitation of therapeutic cancer vaccines. It covers all the aspects involved in the vaccine research and development: identification of optimal target antigens, formulations, delivery strategies, adjuvants, among others, as well as their use in combination with other immunomodulatory approaches. The book discusses topics such as identification of tumor associated and specific antigens, proteogenomic for identification of novel target tumor antigens, antigen specific T cells and Peptide and RNA based vaccines. Additionally, it covers oncolytic viruses for antigen delivery, cancer vaccine targeting viral antigens and combinatorial immunotherapy strategies. Written by leading experts worldwide, this is a valuable resource for cancer researchers, oncologists and members of the biomedical field who want to understand in depth the recent findings in the field of cancer vaccines. Describes the state of the art of the research and development of therapeutic cancer vaccines. Presents detailed diagrams to help the reader understand the functionality of each type of vaccine discussed. Encompasses recent findings in the field through chapters written by leading experts worldwide.

Cancer in Sub-Saharan Africa Olufunso Adebola Adedeji, 2017-05-24 This book discusses the current state of cancer pathway as it is relevant to sub-Saharan Africa and highlights differences in epidemiology and the underlying problems with management. It outlines the current practice and opinions in all forms of cancer, also highlighting future prospects. Starting by providing background information on the epidemiology and genomic variations, the book then goes on to look at infection related cancers and continues to prostate, GI, breast cancer and ovarian and cervical cancer. The last part of the book focuses on delivery of affordable and accessible care. Palliative services and primary and transnational research, as well as clinical trials, are also discussed. Written by a team of authors based in the UK, Nigeria, South Africa and the US, this book offers an overview of the current state and challenges of cancer care in sub-Saharan Africa and it would be valuable to policy makers, researchers, funding organisations and can be an adjunct to standard text books for students, residents and established doctors.

The American Cancer Society's Principles of Oncology The American Cancer Society, 2018-03-20 Developed by the American Cancer Society, this new textbook designed for a wide range of learners and practitioners is a comprehensive reference covering the diagnosis of cancer and a range of related issues that are key to a multidisciplinary approach to cancer and critical to cancer control and may be used in conjunction with the book *The American Cancer Society's Oncology in Practice: Clinical Management*. Edited by leading clinicians in the field and a stellar contributor list from the US and Europe, this book is written in an easy to understand style by multidisciplinary teams of medical oncologists, radiation oncologists and other specialists reflecting day to day decision making and clinical practice. Input from pathologists, surgeons, radiologists and other specialists is included wherever relevant and comprehensive treatment guidelines are provided by expert contributors where there is no standard recognized treatment. This book is an ideal resource for anyone seeking a deeper understanding of cancer prevention, screening and

follow up which are central to the ACS's worldwide mission on cancer control
