The Thermodynamics of Linear Fluids and Fluid Mixtures Miloslav Pekař, Ivan Samohýl, 2013-11-19 In this book Samohýl and Pekař offer a consistent and general non equilibrium thermodynamic description for a model of chemically reacting mixtures. This type of model is frequently encountered in practice and up until now chemically reacting systems out of equilibrium have rarely been described in books on non equilibrium thermodynamics. Readers of this book benefit from the systematic development of the theory: this starts with general principles going through the applications to single component fluid systems and finishing with the theory of mixtures including chemical reactions. The authors describe the simplest mixture model: the linear fluid and highlight many practical and thermodynamically consistent equations for describing transport properties and reaction kinetics for this model. Further on in the book the authors also describe more complex models. Samohýl and Pekař take special care to clearly explain all methodology and starting axioms and they also describe in detail applied assumptions and simplifications. This book is suitable for graduate students in chemistry, materials science and chemical engineering as well as professionals working in these and related areas.

Hydrodynamic Fluctuations in Fluids and Fluid Mixtures Jose M. Ortiz de Zarate, Jan V. Sengers, 2006-04-19 This book deals with density, temperature, velocity and concentration fluctuations in fluids and fluid mixtures. The book first reviews thermal fluctuations in equilibrium fluids on the basis of fluctuating hydrodynamics. It then shows how the method of fluctuating hydrodynamics can be extended to deal with hydrodynamic fluctuations when the system is in a stationary nonequilibrium state. In contrast to equilibrium fluids where the fluctuations are generally short ranged unless the system is close to a critical point, fluctuations in nonequilibrium fluids are always long ranged encompassing the entire system. The book provides the first comprehensive treatment of fluctuations in fluids and fluid mixtures brought out of equilibrium by the imposition of a temperature and concentration gradient but that are still in a macroscopically quiescent state. By incorporating appropriate boundary conditions in the case of fluid layers it is shown how fluctuating hydrodynamics affects the fluctuations close to the onset of convection. Experimental techniques of light scattering and shadowgraphy for measuring nonequilibrium fluctuations are elucidated and the experimental results thus far reported in the literature are reviewed. Systematic exposition of fluctuating hydrodynamics and its applications. First book on nonequilibrium fluctuations in fluids. Fluctuating Boussinesq equations and nonequilibrium fluids. Fluid layers and onset of convection. Rayleigh scattering and Brillouin scattering in fluids. Shadowgraph technique for measuring fluctuations. Fluctuations near hydrodynamic instabilities.
