Biogeography and Ecology of Southern Africa Marinus J.A. Werger, A.C. van Bruggen, 2012-12-06 Southern Africa is certainly not a naturally bounded area so that there are several possibilities for delineating it and concepts about its extent Wellington discussed the various possibilities for delineation and suggested that one line stands out more clearly and definitely as a physical boundary than any other namely the South Equatorial Divide the watershed between the Zaïre Cuanza and Rufiji Rivers on the one hand and the Zambezi Cunene and Rovuma Rivers on the other This South Equatorial Divide is indeed a major line of separation for some organisms and is also applicable in a certain geographical sense though it does not possess the slightest significance for many other groups of organisms ecosystems or geographical and physical features of Africa The placing of the northern boundary of southern Africa differs in fact strongly per scientific discipline and is also influenced by practical considerations regarding the possibilities of scientific work as subordinate to certain political realities and historically grown traditions This is illustrated for example in such works as the Flora of Southern Africa where the northern boundary of the area is conceived as the northern and eastern political boundaries of South West Africa South Africa and Swaziland Botswana traditionally included in the area covered by the Flora Zambesiaca thus forms a large wedge in Southern Africa *The Journal of Ecology*, 1926 Vols 16 21 include supplement British empire vegetation abstracts

seeking a step by step methodology for analysing plant and animal communities using R and Excel Microsoft's Excel spreadsheet is virtually ubiquitous and familiar to most computer users. It is a robust program that makes an excellent storage and manipulation system for many kinds of data including community data. The R program is a powerful and flexible analytical system able to conduct a huge variety of analytical methods which means that the user only has to learn one program to address many research questions. Its other advantage is that it is open source and therefore completely free. Novel analytical methods are being added constantly to the already comprehensive suite of tools available in R. Mark Gardener is both an ecologist and an analyst. He has worked in a range of ecosystems around the world and has been involved in research across a spectrum of community types. His knowledge of R is largely self taught and this gives him insight into the needs of students learning to use R for complicated analyses.

Economy and Ecology of Heathlands W. Herbert Diemont, Wim J.M. Heijman, Henk Siepel, Nigel R. Webb, 2014-12-22. Heathlands in Europe reflect a long history of human activity and use. Through the ages heathlands have been of importance as semi agricultural areas, hunting territories and various other uses of mankind. This diversity of use has created a cultural diversity over the whole Atlantic area of Europe from Portugal and Spain in the south to Norway in the north and from Germany in the east to Ireland in the west. **Economy and Ecology of Heathlands** shows us both the diversity in use all over Europe and combines this information with the newest insights in ecology and the Natura 2000 status. Most of these heathlands have got nowadays. Central theme is how to cover the costs of maintenance of these heathlands. Is their future in new types of commons or do other types of land ownership using the revenues of heathland ecosystem services give better opportunities. The editors combine a broad variance in knowledge of heathlands varying from all aspects of ecology, land use as well as economy.

Gilbertson, 2012-12-06 Our aim in writing this book is to provide students and teachers with a simple introductory text which deals with practical aspects of ecology environmental biology and biogeography emphasizing actual field and classroom investigations Basic concepts and methods of survey mapping and aerial photography data collection and data analysis are described and discussed in order to encourage students to identify and tackle worthwhile projects The level at which this text is appropriate depends very much upon particular circumstances The greater part lies within the scope of the sixth form and the first and second years of college polytechnic and university courses in the British Isles and their equivalents overseas All students inevitably meet difficulties in the identification of plant and animal species particularly when they venture into unfamiliar habitats and regions This is often the cause of unnecessary alarm Many ecological principles or problems may be illustrated by reference to familiar species and habitats such as are found in urban environments as well as those areas of semi natural vegetation favoured for field courses **The Ecology and Conservation of European Dunes** Francisco García Novo, 1997 Includes resumé of articles **Plant community ecology: Papers in honor of Robert H.
