Flaherty,1983 *Eruptions of Mount St. Helens* Robert I. Tilling,Lyn J. Topinka,Donald Alan Swanson,1990

Fiery Volcano Carmen Bredeson,2013-01-01 From his observation point just five miles from Mount St Helens geologist David Johnston said This is it before his radio went dead Johnston watched the volcano explode His body was never found During the violent eruption on May 18 1980 the volcano released tons of rock and debris along with scorching steam and poisonous gas Volcanic ash soared miles into the air before covering roads and towns Fifty seven people died during the eruption and it forever changed the landscape of the mountain Author Carmen Bredeson examines the causes and effects of the Mount St Helens eruption and gives firsthand stories from victims and survivors **The Eruption of Mount St. Helens** Charles River Editors,2014-07-23 Includes pictures Includes eyewitness accounts of the eruption Includes a bibliography for further reading One big Aha for geologists was that an entire mountain could collapse Peter Frenzen Mount St Helens certainly reminds us of the power of nature and we can certainly see that in the evidence of the 1980 eruption that s all around us And here we just have an opportunity to see sort of another chapter in its history and to understand the forces that lie beneath our feet Peter Frenzen In 1980 the United States suffered the deadliest and most destructive volcanic eruption in its history when Mount St Helens literally blew its lid off the result of seismic activity during the eruption What made the eruption all the more remarkable is that a fair amount of preparations had gone into anticipating it after an earthquake in the area a few months earlier alerted federal geologists to the possibility of activity there In fact Mount St Helens had been the cause of the earthquake itself the result of its own lava flows under the surface Despite the warning signs the volcanic eruption wound up being so powerful that it devastated hundreds of square miles around it along with spewing volcanic ash in a giant plume that managed to scatter and deposit ash across 11 different states Furthermore another earthquake on May 18 managed to make the north face of the mountain collapse shocking observers and scientists as it created the largest landslide ever recorded Taken together Mount St Helens ultimately inflicted over 1 billion in damage and killed 57 people including U S scientists studying the volcano on the day it exploded When President Carter saw the area he remarked Someone said this area looked like a moonscape But the moon looks more like a golf course compared to what s up there The 1980 eruption is why so many Americans are familiar with Mount St Helens today but it remains an active volcano and was known for volcanic activity back when the Native Americans lived around it In fact Native Americans had oral legends to explain the origins of Mount St Helens and European explorers and settlers also observed its eruptions in the 19th century As scientist Peter Frenzen noted There s absolutely no question that Mount St Helens will erupt again The question is when The Eruption of Mount St Helens chronicles the history of America s most famous volcano and the destruction it wreaked in 1980
