Epilepsy Global Issues For The Practicing Neurologist:

Epilepsy Jerome Engel, 2005-04-01 This volume is the second in a series developed under the auspices of the World Federation of Neurology to meet the needs of neurologists who must practice medicine without many of the advantages that are often taken for granted in the industrialized world. It is targeted to neurologists practicing in low resource environments and those who wish to practice cost effective neurology and addresses issues important for neurologists in developing countries that are not covered in standard textbooks. The series will update the reader in currently accepted diagnostic and management practice. Material is presented in a user friendly interactive manner with abundant case material. Epilepsy is one of the most common serious primary brain disorders affecting forty million people worldwide. According to the World Health Organization, epilepsy accounts for 1% of the Global Burden of Disease, equivalent to lung cancer in men and to breast cancer in women. It is not surprising therefore that ten to twenty texts on epilepsy are published annually. These texts contain the very latest information on diagnosis and treatment of various aspects of epilepsy; however, approximately 80% of people with epilepsy in the world live in developing countries where modern diagnostic and treatment approaches do not exist. Upwards of 90% of people with epilepsy in these areas receive no treatment at all. This is the first text to address the issues faced by neurologists who must deliver care with limited resources, often in a setting of tropical diseases and malnutrition that characterize practice in developing countries. Multiple Sclerosis for the Practicing Neurologist Adnan Al-Araji, Joel

Oger, 2006-11-21 The Multiple Sclerosis International Foundation estimates that over 2.5 million people worldwide have multiple sclerosis. Throughout developed countries, increased attention has been paid to this disorder due in large part to advanced imaging technology and the development of new therapeutic pharmaceutical agents. *Multiple Sclerosis for the Practicing Neurologist*, edited by Joel Oger MD and Adnan Al Araji MB, offers a practical review of this disabling condition, especially focused on the evaluation and treatment of patients in low resource environments which lack these new technologies. It is the fifth volume in a series of clinically oriented titles developed under the auspices of the World Federation of Neurology. This volume gives concise, useful clinical information for practicing neurologists, providing a straightforward overview of each topic and including many representative case studies. Drs. Oger and Al Araji effectively demonstrate that a diagnosis of multiple sclerosis is possible and acceptable without expensive tests and equipment such as MRIs. In parallel, treatment options that avoid costly disease-modifying drugs have been stressed throughout. Topics covered include: Diagnosis and diagnostic tests, Symptom management and immunotherapy, Multiple sclerosis rating scales, Clinical trials in multiple sclerosis. *Multiple Sclerosis for the Practicing Neurologist* is the first volume to address the issues faced by neurologists with limited resources who must deliver care to MS patients. **Neurological Disorders** World Health Organization, 2006

Although there are several gaps in understanding the many issues related to neurological disorders, we know enough to be able to shape effective policy responses to some of the most common. This book describes and discusses the increasing public

health impact of common neurological disorders such as dementia epilepsy headache disorders multiple sclerosis neuroinfections neurological disorders associated with malnutrition pain associated with neurological disorders Parkinson's disease stroke and traumatic brain injuries It provides information and advice on public health interventions that may reduce their occurrence and consequences and offers health professionals and planners the opportunity to assess the burden caused by these disorders The clear message that emerges is that unless immediate action is taken globally the neurological burden is likely to become an increasingly serious and unmanageable *Neurologic Consequences of Malnutrition* Marco T.

Medina,2007-08-07 Nearly 800 million people in the world do not have enough to eat In many developing countries inadequate amounts of food and inadequate diversity of food continue to be priority health problems Malnutrition in all its forms increases the risk of disease and early death *Neurologic Consequences of Malnutrition* edited by Dr Marco T Medina seeks to underline the magnitude of neurologic diseases related to malnutrition and the importance of early detection and opportune treatment Designed particularly for neurologists practicing in low resource environments this text is written by a multinational group of expert practicing neurologists who treat patients suffering from the neurologic consequence of malnutrition *Neurologic Consequences of Malnutrition* begins with an overview of the epidemiology and incidence of malnutrition and neurologic disorders There is a discussion of the clinical and functional assessment of undernourished patients focusing on patients with Protein Energy Malnutrition as well as an extensive and complete classification of the different micronutrient deficiencies related to neurologic symptoms Other topics covered include the relationship between alcoholism and malnutrition a major public health challenge in developing nations and the neurophysiologic findings in undernourished patients **ICP-IAN 100 Questions in Neurological Practice** PK Maheshwari,Gagandeep Singh,2023-09

Neurology, An Issue of Veterinary Clinics of North America: Small Animal Practice Sharon Kerwin,Amanda Taylor,2017-11-27 This issue of *Veterinary Clinics of North America Small Animal Practice on Neurology* edited by Sharon Kerwin and Amanda Taylor includes Advances in High field MRI Acupuncture for neurologic conditions Head trauma Pituitary hypophysectomy Acute non compressive disc extrusion and hydrated nucleus pulposus extrusion Discospondylitis Minimally Invasive Vertebral Column Surgery Vascular events in the Brain Fungal infections of the CNS Feline Seizures Clinical evaluation of the feline neurologic patient Intervertebral disc disease recent advances in therapy Three dimensional printing role in neurologic disease and Diffusion tensor imaging in spinal cord injury **Achieving Equity in Neurological Practice** Bruce Ovbiagele,Sharon Lewis,Daniel José Correa,Reena Thomas,Larry CharlestonIV,2024-10-22 The recent high profile murders of George Floyd and other African American individuals along with the prevailing coronavirus disease COVID 19 pandemic have reinforced the notion that certain marginalized populations have worse health outcomes than other populations likely due to unequal and unjust policies and practices Neurological processes and prognoses frequently vary by sex gender race ethnicity socioeconomic status and geographic location In particular individuals of lower socioeconomic

status and from minority racial and ethnic backgrounds have worse neurological health and often receive a lower standard of neurological care. These inequities in neurological outcomes are attributed to wider societal social influences which impact how people live and how neurology is practiced. Published evidence suggests that healthcare providers and the healthcare system contribute to inequities in neurological care for vulnerable and underserved populations. However, educating neurology care providers about these issues and training them to provide equitable care for these patients can potentially improve neurology care access, delivery, and outcomes. In this book, we provide the theoretical background, scientific evidence, and experiential knowledge warranted to properly care for vulnerable underserved patients with neurological diseases at the levels of the provider and system. This book examines the root causes of neurological health inequities across a broad range of topics and offers possible solutions for achieving neurological health equity. Initial chapters help to frame the overall issue of neurological health equity. Subsequent chapters evaluate neurological health equity from the clinical practice standpoint with a focus on select populations and subspecialty care delivery settings. Lastly, we discuss the bigger picture with regard to the pipeline of practitioners and purview of policy makers. This text is relevant for neurology residents and fellows, multidisciplinary neurological care practitioners, neurologists, neurosurgeons, advanced practice providers, hospitalists, emergency physicians, critical care physicians, pharmacists, and allied health personnel, and public health researchers and health policy makers. The book is divided into three sections: Principles, Neurological Conditions, and Priorities. The first section establishes the framework and explains various key terminologies and concepts which undergird the care of vulnerable and underserved patient populations. The second section, Neurological Conditions, covers key neurological diseases by sub-specialty, describing published evidence of care and outcome disparities, gaps in knowledge, practical techniques for bridging these disparities on provider and system levels. The third section, Priorities, identifies important areas of focus and improvement, targeting trainees, researchers, community partners, stakeholder organizations, and policy makers, which would be crucial for implementing sustained societal level enhancements in the neurological health of these vulnerable populations.
