Epilepsy And Sleep Physiological And Clinical Relationships:

Epilepsy and Sleep Dudley S. Dinner, Hans O. Luders, 2001-01-24 It is well recognized that there is an intimate and reciprocal interaction between epilepsy and sleep The book *Epilepsy and Sleep* is a ground breaking comprehensive source for exploring this correlation and is especially timely because of the considerable growth in the understanding of the physiology underlying both sleep and epilepsy An insightful reference it presents many of the complex physiologic mechanisms underlying epilepsy sleep interaction and highlights sleeping disorder symptoms that may be related to epilepsy The annual cost of treating epilepsy in the United States is an estimated 12.5 billion according to a report issued January 2000 by The Epilepsy Foundation The Foundation also reports that more than 180 000 Americans develop epilepsy each year However thousands more cases may be misdiagnosed as sleeping disorders causing these figures to jump significantly This correlation and diagnosis can help determine the correct type of medication to administer to regulate the symptoms in turn saving hundreds of hours of lost time at work and millions of dollars Provides the first comprehensive source of information available on the correlation between epilepsy and sleep Outlines sleeping disorder symptoms which may in fact be caused by epilepsy Well illustrated easy to read text An essential text for epileptologists psychiatrists physicians and sleep disorder therapists Written by internationally recognized experts in the field Sleep Disorders Pasquale Montagna, Sudhansu Chokroverty, 2011 The second part of a two part work in the Handbook of Clinical Neurology series on sleep disorders

Sleep, Epilepsies, and Cognitive Impairment Peter Halasz, Anna Szucs, 2017-12-22 Translational research connects science and clinical medicine from the bench to the bedside In *Sleep Epilepsies and Cognitive Impairment* the authors look back from the bedside to the brain function underlying clinical symptoms and reveal mechanisms explored by contemporary neuroimaging and signal analysis in the overlapping fields of sleep and epilepsy This book will help the reader to see epilepsy from a new viewpoint The common pathophysiology binding together the diverse manifestations of epilepsies is the exaggeration of plastic functions of the brain involving the hippocampus the non specific thalamocortical system and the perisylvian cognitive network Epileptic derailment seems to be the price for the latest achievements of the mammal and human brain namely the highly developed ability to change and learn The contemporary results of sleep research provide new viewpoints to explain why sleep and epilepsy are bedfellows Converging evidence supports the concept that one of the most important biological roles of NREM sleep is the renewal of synaptic balance ensuring learning ability from one day to the next and consolidation of new memories Epilepsy and NREM sleep use overlapping structures and functions therefore epilepsy beginning in early childhood may interfere with sleep plastic functions NREM sleep which affects original learning and memory may become the hidden source of chronic cognitive impairment when epilepsy occurs during sleep and blocks the plastic processes *Sleep Epilepsies and Cognitive Impairment* abandons the academic classification of epilepsy by following the system epilepsy concept binding major epilepsies with structures and functions of physiological brain systems It tries to show within this system the close interrelationship between sleep epilepsy and cognition Neuroscientists clinical epileptologists and neurologists interested in brain processes underlying brain plasticity sleep and epilepsy will find this book thought provoking It offers good brain gymnastics for reconsidering the ideas on epilepsy It provides contemporary knowledge about the neurophysiological and functional anatomical background of major epilepsies Treats major epilepsies as system epilepsies of brain networks Reveals the interrelationship of sleep epilepsy and cognitive impairment showing how epileptic manifestations became facilitated in NREM sleep and interferes with sleep plastic functions
