Epitaxial Microstructures:

Epitaxial Microstructures, 1994-09-15 Newly developed semiconductor microstructures can now guide light and electrons resulting in important consequences for state of the art electronic and photonic devices This volume introduces a new generation of epitaxial microstructures Special emphasis has been given to atomic control during growth and the interrelationship between the atomic arrangements and the properties of the structures Atomic level control of semiconductor microstructures Molecular beam epitaxy metal organic chemical vapor deposition Quantum wells and quantum wires Lasers photon IR detectors heterostructure transistors Ceramic Microstructures Antoni P. Tomsia, Andreas M. Glaeser, 2012-12-06 This volume titled Proceedings of the International Materials Symposium on Ceramic Microstructures Control at the Atomic Level summarizes the progress that has been achieved during the past decade in understanding and controlling microstructures in ceramics A particular emphasis of the symposium and therefore of this volume is advances in the characterization understanding and control of microstructures at the atomic or near atomic level This symposium is the fourth in a series of meetings held every ten years devoted to ceramic microstructures The inaugural meeting took place in 1966 and focussed on the analysis significance and production of microstructure the symposium emphasized the need for and importance of characterization in achieving a more complete understanding of the physical and chemical characteristics of ceramics A consensus emerged at that meeting on the critical importance of characterization in achieving a more complete understanding of ceramic properties That point of view became widely accepted in the ensuing decade The second meeting took place in 1976 at a time of world wide energy shortages and thus emphasized energy related applications of ceramics and more specifically microstructure property relationships of those materials The third meeting held in 1986 was devoted to the role that interfaces played both during processing and in influencing the ultimate properties of single and polyphase ceramics and ceramic metal systems Thin Films: Heteroepitaxial Systems Amy W K Liu, Michael B Santos, 1999-06-01 Heteroepitaxial films are commonplace among today's electronic and photonic devices The realization of new and better devices relies on the refinement of epitaxial techniques and improved understanding of the physics underlying epitaxial growth This book provides an up to date report on a wide range of materials systems The first half reviews metallic and dielectric thin films including chapters on metals rare earths metal oxide layers fluorides and high Tc superconductors The second half covers semiconductor systems reviewing developments in group IV arsenide phosphide antimonide nitride II VI and IV VI heteroepitaxy Topics important to several systems are covered in chapters on atomic processes ordering and growth dynamics *Physics Of Semiconductors, The - Proceedings Of The 22nd International Conference (In 3 Volumes)* David J Lockwood, 1995-01-20 These proceedings review the progress in most aspects of semiconductor physics including those related to materials processing and devices The conference continues the tradition of the ICPS series and these volumes include state of the art lectures The plenary and invited papers address areas of major

interest These volumes will serve as excellent material for researchers in semiconductor physics and related fields

The Physics and Fabrication of Microstructures and Microdevices Michael J. Kelly, Claude Weisbuch, 2012-12-06 les Houches This Winter School on The Physics and Fabrication of Microstructures originated with a European industrial decision to investigate in some detail the potential of custom designed microstructures for new devices Beginning in 1985 GEC and THOMSON started a collaboration on these subjects supported by an ESPRIT grant from the Commission of the European Community To the outside observer of the whole field it appears clear that the world effort is very largely based in the United States and Japan It also appears that cooperation and dissemination of results are very well organised outside Europe and act as a major influence on the development of new concepts and devices In Japan a main research programme of the Research and Development for Basic Technology for Future Industries is focused on Future Electron Devices In Japan and in the United States many workshops are organised annually in order to bring together the major specialists in industry and academia allowing fast dissemination of advances and contacts for setting up cooperative efforts
