**Epstein-Barr Virus and Human Disease** P. H. Levine, D. V. Ablashi, M. Nonoyama, G. R. Pearson, R. Glaser, 2012-12-06  
Since its discovery as the cause of infectious mononucleosis in 1964 the Epstein Barr virus EBV has been etiologically implicated in an increasing number of human diseases Generally considered the first human oncogenic virus because of a number of studies linking it with Burkitt's lymphoma and nasopharyngeal carcinoma NPC as well as its documented oncogenicity in nonhuman primates EBV has served as a model for identifying subsequent candidate oncogenic viruses and the stimulus for Evans' revision of the Henle Koch postulates to accommodate the problems in proving viral oncogenicity in humans Research on the role of EBV in human cancer was particularly enhanced by the pioneering work of Werner and Gertrude Henle and by the coordinated efforts of the Special Virus Leukemia Program and its successors the Special Virus Cancer Program and the Virus Cancer Program of the National Cancer Institute NCI Initiated by Dr Frank J Rauscher who subsequently became director of the NCI and is now Vice President of the American Cancer Society and expanded by Dr John B Moloney whose contributions to cancer research were honored at this Second International Symposium on EBV and Associated Malignant Diseases these NCI contract supported programs brought together investigators from all over the world to participate in a joint effort to unravel the mystery of EBV behavior and pathogenicity It was these programs that gave us the opportunity to work with such outstanding people as Professor Yohei Ito to whom this book is dedicated

Epstein-Barr Virus and Human Cancer K. Takada, 2012-12-06 In this book outstanding researchers from the US and Japan review recent progress in Epstein Barr virus research Most people carry EBV in memory B cells in a latent stage Many malignancies such as T NK cell lymphoma AIDS associated B cell lymphoma gastric carcinoma and Hodgkin's disease have been causally linked to EBV The development of molecular biology technique has allowed us to study the roles of individual EBV genes that act in the maintenance and disruption of EBV latency *Epstein-Barr Virus and Human Disease · 1990* D. V. Ablashi, A. T. Huang, J. S. Pagano, G. R. Pearson, C. S. Yang, 2012-12-06 The Epstein Barr virus EBV isolated in 1966 continues to draw worldwide attention as an important human pathogen Its importance is largely related to the continuing accumulation of evidence that implicates EBV as an etiological factor for certain types of human cancer More recent investigations on this virus have focused on the identity of the viral genes responsible for the different disease manifestations observed following viral infection It is hoped that by thorough investigation of this virus clues to how cancer develops from a normal cell will surface In addition many of the gene products are now being exploited for the development of new and more sensitive tests for the diagnosis and clinical management of individuals with EBV associated diseases Thus studies on this virus continue to provide new information of importance to our understanding of the malignant process In an effort to attract both basic and clinical scientists to the same meeting for purposes of scientific exchange and fostering a closer interaction between these individuals a series of international symposia was initiated in 1984 The first meeting was

held in Loutraki Greece and was attended by approximately 100 participants The second international symposium was held in St Petersburg Florida in 1986 and was attended by approximately twice as many participants as attended the Loutraki meeting

**Epstein-Barr Virus and Human Disease** P. H. Levine, D. V. Ablashi, M. Nonoyama, 1987-09-16 Epstein-Barr Virus and Human Disease • 1988 D. V. Ablashi, A. Faggioni, G. R. F. Krueger, J. S. Pagano, G. R. Pearson, 2012-12-06 Epstein Barr virus EBV is one of the most widespread human viruses with over 80% of the general population exposed by young adulthood as determined by antibody studies Initial infection usually occurs during childhood or the teenage years It is clear that depending on the age of the recipient clinical manifestations of the primary infection can vary It has been known for 20 years that EBV is the etiologic agent of acute infectious mononucleosis IM and is also closely associated with African Burkitt's lymphoma BL and nasopharyngeal carcinoma NPC There is increasing evidence that EBV is a factor in the etiology of B cell lymphomas which arise at a high frequency in immunodeficient populations EBV may also contribute to the development of autoimmune disease Thus this virus continues to attract world wide attention The major target cell for EBV infection has now been conclusively identified as the complement receptor type 2 CR2 the CD44 receptor on B lymphocyte It is apparent however that other cells also can become infected by EBV such as epithelial cells in the parotid gland and other epithelial cells in the upper respiratory tract This might help account for the EBV associated carcinomas of the upper respiratory tract The first in a series of international symposia on EBV associated diseases focused primarily on Burkitt's type lymphomas or on NPC Kyoto 1977 Dusseldorf 1980 Kuala Lumpur 1982 and emphasized mainly the clinical elements of these diseases Subsequent symposia Loutraki 1984 St

**Mucosal Immunology and Virology** Stephen K. Tying, 2007-04-27 An understanding of virus infection and the

underlying role of the immune system in protection against these diseases is vital in today's medical climate. Previously only symptoms could be treated as there were no antiviral therapies. The increasing amounts of research and the huge number of discoveries of immunologic agents and pathways has led to the opportunity to look to the basic physiology of the various disease process as never before. This book is designed to provide the clinician with a thorough and yet approachable textbook describing the relationships between immunology, virology and the disease process.

Cancer Epidemiology and Prevention. David Schottenfeld, Joseph F. Fraumeni Jr., 2006-08-24. This much anticipated Third Edition provides a comprehensive presentation of the global burden and patterns of cancer occurrence along with new developments in our understanding of cancer causation and prevention. Special attention is given to epidemiologic approaches that incorporate molecular biomarkers based on genomic and other emerging technologies providing new insights into the role of genetic predisposition and gene-environment interactions in cancer induction. In addition, new chapters are included on social class disparities in cancer incidence and mortality, the role of obesity and physical inactivity in cancer etiology, the potential effects of electromagnetic fields and radiofrequency radiation and the principles of cancer chemoprevention. The textbook is organized into five sections: Basic Concepts, The Magnitude of Cancer, The Causes of Cancer, Cancer by Tissue of Origin, Cancer Prevention and Control. In this new edition, Drs. David Schottenfeld and Joseph F. Fraumeni Jr. have enlisted three distinguished Associate Editors: Drs. Jonathan Samet of Johns Hopkins University, Graham Colditz of Harvard University and Alice Whittemore of Stanford University.

Medveczky,Herman Friedman,Mauro Bendinelli,2006-04-11 Although virology and immunology are now considered separate disciplines history shows that these areas of investigation always overlapped and one cannot really exist without the other This trend has become particularly significant and fruitful in the past few years in the area of herpesvirus research The genomes of the most important herpesviruses have been sequenced a significant portion of their genes have been identified and many secrets of regulation of gene expression have been unraveled Now this progress sets the stage for a true revolution in herpesvirus research analysis of interactions between the host and the virus Because herpesviruses can induce suppress and fool the immune system the most productive herpesvirologists are also expert immunologists and the current results of this interdisciplinary effort are truly remarkable Because herpesviruses cause many important human diseases the development of vaccines against these agents is a very significant goal This effort is

also very challenging because of the complexity of herpesviruses and the lack of sufficient information about immune responses. The remarkable ability of herpesviruses to escape immune responses is another feature that brings immunology and virology together. Herpesviruses code many proteins that interact with and down-regulate some key elements of the immune system. This property of herpesviruses represents a major challenge in developing strategies against these viruses. On the positive side, these viral proteins also provide novel tools for analyzing specific immune reactions and molecular mechanisms.
