Equilibrium, Markets and Dynamics Cars H. Hommes, Roald Ramer, Cees A. Withagen, 2012-12-06 This book contains essays in honour of Claus Weddepohl who after 22 years is retiring as professor of mathematical economics at the Department of Quantitative Economics of the University of Amsterdam Claus Weddepohl may be viewed as the first Dutch mathematical economist in the general equilibrium tradition of Arrow Debreu and Hahn The essays in this book are centered around the themes Equilibrium Markets and Dynamics that have been at the heart of Weddepohl's work on mathematical economics for more than three decades The essays have been classified according to these three themes Admittedly such a classification always is somewhat arbitrary and most essays would in fact fit into two or even all three themes The essays have been written by international as well as Dutch friends and colleagues including Weddepohl's former Ph D students The book starts with a review of Claus Weddepohl's work by Roald Ramer who has been working with him in Amsterdam for all those years The review describes how Weddepohl became fascinated by general equilibrium theory in the early stages of his career how he has been working on the theory of markets throughout his career and how he turned to applications of nonlinear dynamics to price adjustment processes in a later stage of his career The first part of the book *Equilibrium* collects essays with general equilibrium theory as the main theme *Equilibrium and Dynamics* Mukul Majumdar, 1992-06-18 Over the last 40 years Professor David Gale has played a leading role in developing two themes of fundamental importance to economic theory As a tribute to his creative research this volume contains contributions from some leading researchers who explore different directions in these areas **Partial Equilibrium in a Market in the Case of Increasing Returns and Selling Costs** Hubertus Nicolaus Weddepohl, 1974 Equilibrium and Dynamics Mukul Majumdar, 1992-01-01 Over the last forty years Professor David Gale has played a leading role in developing two themes of fundamental importance to economic theory first the formulation of appropriate concepts of economic equilibrium in the tradition of Walras and Cournot second the analysis of evolution of economic agents and institutions in a dynamic environment As a tribute to his creative research this volume contains contributions from leading researchers who explore different directions in these areas Some have extended the existing literature others have stressed the need for new directions The volume will be of particular interest to researchers in economic theory Equilibrium and Dynamics David Gale, Mukul Majumdar, 1992 Essays in Dynamic General Equilibrium Theory Alessandro Citanna, John Donaldson, H. Polemarchakis, Paolo Siconolfi, Stephen Spear, 2006-01-11 In the area of dynamic economics David Cass's work has spawned a number of important lines of research including the study of dynamic general equilibrium theory the concept of sunspot equilibria and general equilibrium theory when markets are incomplete Based on these contributions this volume contains new developments in the field written by Cass's students and co authors *General Equilibrium Analysis and the Theory of Markets* Manuel Luís Costa, 1998 In this book Dr Costa has made a substantial addition to the literature that establishes the absence of economic foundations for current general

equilibrium models He rightly emphasizes the lack in them of an account of the behavior of decentralized markets like those which predominate in reality and indicates respects in which the theoretical formulation of such markets can be undertaken the book will be profitably studied by students and professors of economics alike Donald A Walker Indiana University of Pennsylvania US
