World Eradication of Infectious Diseases E. Harold Hinman, 1966 *The Eradication of Infectious Diseases* Donald Hopkins, 1998-03-06 In 1993 an International Task Force for Disease Eradication evaluated over 80 potential candidate diseases and made recommendations However little has been done to develop the science of eradication systematically This book reports the findings of a multidisciplinary workshop on the eradication of infectious diseases It reviews the history of eradication efforts and lessons from previous campaigns and distinguishes among eradication elimination and control programs and extinction of an etiologic agent It addresses a wide range of related issues including biological and socio political criteria for eradication costs and benefits of eradication campaigns opportunities for strengthening primary health care in the course of eradication efforts and other aspects of planning and implementing eradication programs Finally it stresses the importance of global mechanisms for formulating and implementing such programs The Principles and Practice of Disease Eradication Joel Breman, Jon Kim Andrus, 2024 The core content of this textbook is designed to reflect the teaching elements of an intensive one week eradication course given first to graduate students at the School of Public Health Johns Hopkins University JHU in Baltimore United States during the summer of 2012 Given the rapidly changing medical and development world this textbook highlights essential issues for success illustrated by disease specific case studies The Evolution and Eradication of Infectious Diseases Aidan Cockburn, 1963 **Eradication** Nancy Leys Stepan, 2013-02-15 The dream of a world completely free of disease may seem utopian but eradication used in its modern sense to mean the reduction of the number of cases of a disease to zero by deliberate public health interventions has been pursued repeatedly Campaigns against yellow fever malaria and smallpox have been among the largest most costly programs ever undertaken in international public health But only one so far has been successful that against smallpox And yet in 2007 Bill and Melinda Gates surprised the world with the announcement that they were committing their foundation to eradicating malaria Polio eradication is another of their priorities Are such costly programs really justifiable The first comprehensive account of the major disease eradication campaigns from the early twentieth century right up to the present Eradication places these ambitious goals in their broad historical and contemporary contexts From the life and times of the American arch eradicationist Dr Fred Lowe Soper 1893 1977 who was at the center of many of the campaigns and controversies surrounding eradication in his lifetime to debates between proponents of primary health care approaches to ill health versus the eradicationists Nancy Leys Stepan s narrative suggests that today these differing public health approaches may be complementary rather than in conflict Enlightening for general readers and specialists alike Eradication is an illuminating look at some of the most urgent problems of health and disease around the world The New Public Health Theodore H. Introducing a book on global infectious diseases is a daunting challenge Modern developments in molecular research newly available opportunities for earth orbiting satellite based surveillance as a means of predicting certain regional epidemics and the introduction of remarkable new antibiotics which can cure some awesome problems such as river blindness would each have astonished even the most jaded reader only a few decades ago Just the same even with these laudable advances malaria is still with us and both poliomyelitis and tuberculosis are growing worldwide problems As a holdover from my own medical school days I must confess to an affection for the older term of tropical medicine and its historic context in preference to the more popular present name which is the title of this book A century or two ago the motives to study tropical medicine were obvious nations having enormous amounts of maritime trade with distant lands established colonial empires where health in the colonies was a concern for both the natives and the colonists It is unsurprising that the great institutes for such studies sprang up in London Amsterdam Hamburg New York and New Orleans but few of these centers and other similar ones have continued to flourish or even to survive perhaps because the days of empires have gone **Report of the Chief of the Bureau of Animal Industry, United States Department of Agriculture** United States.
