Forensic Management of Sexual Offenders Robert Alan Prentky, Ann Wolbert Burgess, 2012-12-06 Over the past several decades the seeming escalation of crimes involving sexually deviant coercive and aggressive behavior has become an increasingly serious problem manifested in costs to both victims and society at large The long term psychological impact of sexual assault on adult and child victims has been documented numerous times The costs incurred by society include a network of medical and psychological services provided to aid victim recovery the investigation trial and incarceration of offenders often in segregated units or special facilities and the invisible but tangible blanket of fear that forces potential victims to schedule normal daily activities around issues of safety Despite the gravity of the problem there has been a paucity of empirical research directed at the etiology course remediation and management of sexually deviant and coercive behavior In treating these disorders and in making crucial decisions about how to manage these offenders clinicians have been forced to rely on their personal experience Such experience by its nature is unsystematic and lacks the validation that empirical research provides The lack of sound empirical data addressing the problem is certainly noteworthy though not surprising The paucity of research in this area may well be attributable to historical scientific timidity about most aspects of sexual behavior In 1922 Dr Robert L Gay, Straight, and In-between John Money, 1988 Content warning John Money is generally regarded negatively by the transgender community and was an advocate for surgical normalization of intersex infants Wikipedia viewed June 4 2024

Like other developing countries in Pakistan women are frequently victims of intimate partner violence.

Studying violence in a conservative patriarchal set up is a challenging task as the issue is denied and usually concealed under the cloak of family privacy. Thus far in Pakistan intimate partner violence is not recognized as a public health and developmental issue. This study intends to fill this research gap and documents intimate partner violence as a public health issue by investigating its association with women's mental and reproductive health in Pakistan. This research is theoretically embedded in the integrated ecological framework introduced by Heise 1998 to explain and explicate the complexity of the phenomenon of intimate partner violence. In patriarchal societies girls are usually socialized in such a way that they become submissive and dependent on men. In order to ensure women's docility and obedience women are subjected to control discipline and sometimes violent punishment (Foucault 1977). The core assumption of this research is that violence or threat of violence damages women's physical, mental, and reproductive health. Arguably, violence also constricts women's ability to develop essential capabilities to live an independent and dignified life (Nussbaum 2005). Data showed that the acts of violence rendered substantial damage to women's mental and reproductive health. It was found that sexual violence was significantly associated with non-use of contraceptives and unintended pregnancies which may lead to unsafe and high-risk abortions. The qualitative data revealed that physicians and other stakeholders (e.g. religious leaders, community leaders) lacked competence, training, and resources to provide comprehensive care to the victims. This study demonstrates that without protecting women from violence, Pakistan cannot achieve Millennium Development Goals, especially reduction in infant and maternal mortality, gender equality, and women's empowerment.

Variant Sexuality (Routledge Revivals) Glenn Wilson, 2014-06-17. First published in 1987, this book presents contributions from international authorities reviewing major themes in variant sexuality. Genetic and evolutionary arguments are presented for the preponderance of paraphilia in males, whilst Freudian and psychoanalytic theories are shown to have limited scientific basis. These and other topics are reviewed in an interesting book which will be of particular value to students of the psychology of sexuality, evolutionary biology, and psychiatry, as well as those with a more general interest in the social, behavioural, and biological aspects of sexuality.

The Causes and Cures of Criminality Hans J. Eysenck, Gisli H. Gudjonsson, 2013-03-09. The title that the authors have chosen for this book, *The Causes and Cures of Criminality*, suggests that it may be just another book speculating on the sociological evils that need to be put right for everything in the garden to be lovely. If this is the expectation, the reader could not be more mistaken. The recurrent theme in fact is a strong accent on psychological experiments. Both authors have tackled the theoretical and practical side of crime through an exhaustive literature review of past experimental work. Hans J. Eysenck has concentrated on the constitutional and biological theory of criminality, whereas Gisli Gudjonsson has concerned himself more with a review of ongoing research into therapy and possible prevention of antisocial behavior. Part I goes into considerable detail on the causes of criminality, stressing much of the strangely neglected area of individual differences in personality. Research studies point to a very heavy involvement of heredity in the causation of criminality, but the authors are careful to acknowledge that much can be done.

environmentally to discourage a life of crime once those persons who are at risk have been identified Biological Contributions to Crime Causation T.E. Moffitt, Sarnoff A. Mednick, 2012-12-06 This book presents reviews of the literature and reports of new findings from research into biological correlates of criminal behavior The chapters are revised versions of talks given by participants in an Advanced Study Institute sponsored by the North Atlantic Treaty Organization and held in Castelvecchio Pascoli in September 1986 It is our second edited volume on biology and crime The first book *The Causes of Crime* New Biological Approaches was published in 1987 In the preface to that book we described the regrettable history of the pseudobiological research into social problem conducted by the Social Darwinists at the turn of the century We requested that that unfortunate legacy not inhibit responsible and scientifically sound investigations of biological and psychological variables in criminology today Evidence is mounting that shows that research limited to social and environmental variables cannot explain the behavior of the minority of criminal offenders whose criminal career begins in adolescence and develop into recidivistic and violent assaults on society Certainly these offenders are few but epidemiological studies have found them to be responsible for an amount of crimes disproportionate to their small numbers As few 5 % of males commit over 50% of criminal offenses Intervention directed at these relatively few individuals could if successful dramatically reduce our growing violent crime rate The chapters in our earlier book showed that some biological variables do relate to this type of chronic offending The Psychobiology of Human Motivation Hugh Wagner, 2021-02-03 This is a classic edition of Hugh Wagner's influential overview of the biopsychological underpinnings of human motivation It includes a new foreword written by Michael Richter who reflects on Wagner's 20 years of teaching writing and research in the field of biopsychology and promises an engaging succinct and accessible introductory text that remains relevant and useful to students today The Psychobiology of Human Motivation explores what directs our behaviour from basic physiological needs like hunger and thirst to more complex aspects of social behaviour like altruism Wagner explores the limits of biological explanations and shows how humans can influence basic physiological drives in order to adapt to a complex social environment An accessible engaging resource strengthened by many applied examples Wagner's text continues to be integral reading for undergraduate students seeking a solid introduction to the psychology of human motivation across the social and behavioural sciences
