The Problem of Error in Digital Computation John Todd, 1965 **Error in Digital Computation: Proceedings of a symposium conducted by the Mathematics Research Center, United States Army, at the University of Wisconsin, Madison, April 26-28, 1965** Louis B. Rall, 1965 Discusses new advances in electronic digital computers data processing and errors Error in Digital Computation: Proceedings of an advanced seminar conducted by the Mathematics Research Center, United States Army, at the University of Wisconsin, Madison, October 5-7, 1964 Louis B. Rall, 1965 Discusses new advances in electronic digital computers data processing and errors **Error in Digital Computation: Proceedings of an advanced seminar conducted by the Mathematics Research Center, United States Army, at the University of Wisconsin, Madison, October 5-7, 1964** Louis B. Rall, 1965 The Generation of Error in Digital Computation Alston Scott Householder, 1955 *Error in Digital Computation* Louis B. Rall, 1965 **Error in Digital Computation. Volume 1** Louis B. Rall, 1965 Error in Digital Computation II Louis B. Rall, 1965 Error in Digital Computation, V.2: Proceedings of a Symposium...at the University of Wisconsin, Madison, April 26-28, 1965 L. B. Rall, 1965 **Error in Digital Computation, V.1: Proceedings of an Advanced Seminar... at the University of Wisconsin, Madison, October 5-7, 1964** L. B. Rall, 1965 Fast Algorithms for the Digital Computation of Linear Canonical Transforms Aykut Koc, 2011

Although it is straightforward to determine the relationship between the in focus image and the object of a simple optical system such as a lens it is far more challenging to compute the input output relationships of general first order and astigmatic optical systems Such optical systems are known as quadratic phase systems QPS and they include the Fresnel propagation in free space propagation in graded index media passage through thin lenses and arbitrary concatenations of any number of these including anamorphic astigmatic nonorthogonal elements Such computation is accomplished by representing the physical system with a general mathematical framework of integrations against kernels and then distilling the entire system into one input output relationship that can be represented by a linear integral transform The underlying mathematical integral transforms can be applied to a wider field of signal processing where they are known as the linear canonical transform LCT of a signal Conventional numerical integration methods have a computational complexity of $O(N^2)$ where N is the space bandwidth product of the sampling scheme e.g the number of pixels in the field for an optical system The algorithms described here yield a complexity of only $O(N \log N)$ The key is the use of different decompositions or factorizations of a given input output relationship into simpler ones Instead of following the general physical subparts in cascaded systems and computing input output relations separately these algorithms use the simplest possible decompositions to represent the entire system in terms of least possible number of steps The algorithms are Fast Fourier Transform FFT based methods and the only essential deviation from exactness arises from approximating a continuous Fourier transform FT with the discrete Fourier transform DFT Thus the algorithms work with a performance similar to that of the fast Fourier

transform algorithm in computing the Fourier transform both in terms of speed and accuracy Unlike conventional techniques these algorithms also track and control the space bandwidth products in order to achieve information that is theoretically sufficient but not wastefully redundant

Rounding Errors in Algebraic Processes James Hardy Wilkinson,2023-05-25 This book combines a rigorous mathematical analysis with a practicality that stems from an obvious first hand contact with the actual numerical computation The well chosen examples alone show vividly both the importance of the study of rounding errors and the perils of its neglect A A Grau SIAM Review 1966 Rounding Errors in Algebraic Processes was the first book to give systematic analyses of the effects of rounding errors on a variety of key computations involving polynomials and matrices A detailed analysis is given of the rounding errors made in the elementary arithmetic operations and inner products for both floating point arithmetic and fixed point arithmetic The results are then applied in the error analyses of a variety of computations involving polynomials as well as the solution of linear systems matrix inversion and eigenvalue computations The conditioning of these problems is investigated The aim was to provide a unified method of treatment and emphasis is placed on the underlying concepts This book is intended for mathematicians computer scientists those interested in the historical development of numerical analysis and students in numerical analysis and numerical linear algebra
