of three decades of environmental law this absorbing book reconsiders some of the policies devised to remedy centuries of abuse of the planet It acknowledges the advances made using technological standards to effect pollution control as well as rudimentary systems that regulate use of land at the local level However as the author observes these systems have limitations in solving vexing problems such as sprawl and non point source pollution as the cost of their use can easily outweigh the benefits He suggests a system termed Green Wood in the Bundle of Sticks that provides the necessary theoretical and historical bases to bridge the gap between the potentials of each system Using objective criteria based on science this system is tied to a land ownership system that also takes into account societal concerns at a broader level

Judeo Christian heritage of belief in humankind's dominion the tradition of stewardship and the more recent belief in progress to determine the extent to which these attitudes underlie ecological problems and how far they embody resources adequate for combating such problems He then examines concerns of applied ethics and considers our obligations to future generations the value of life and the moral standing and significance of nonhumans Simultaneously he offers and defends a theory of moral principles appropriate for dealing with such concerns as pollution scarce natural resources population growth and the conservation and preservation of the environment The second edition includes a new preface and introduction as well as a bibliographic essay and an updated list of references incorporating relevant scholarship since the publication of the first edition
