## **Econ New Approach:**

**The New Economy in Transatlantic Perspective** Kurt Huebner, 2005-02-03 What's left from the new economy This book takes an unfashionable perspective and shows that despite all the mistaken ideas and exaggerations the technological changes of the 1990s still have important effects today Economic history shows that technological revolutions tend to generate deep economic and social crises before a temporary state of equilibrium is reached The established modes of accumulations and regimes of regulation of national capitalisms and international capitalism have been undermined by the collapse of the high tech asset bubble Financial markets are still in disarray What can be observed however is that national economies are better positioned to tackle the crisis than others Why is this This and other important questions are tackled by an international team of contributors including Daniele Archibugi Harald Hagemann Bruno Amable Martin Heidenreich and David Gibbs This volume should be of great interest to all those working at the intersection of international politics and economics

**Beyond Traditional Probabilistic Methods in Economics** Vladik Kreinovich, Nguyen Ngoc Thach, Nguyen Duc Trung, Dang Van Thanh, 2018-11-24 This book presents recent research on probabilistic methods in economics from machine learning to statistical analysis Economics is a very important and at the same a very difficult discipline It is not easy to predict how an economy will evolve or to identify the measures needed to make an economy prosper One of the main reasons for this is the high level of uncertainty different difficult to predict events can influence the future economic behavior To make good predictions and reasonable recommendations this uncertainty has to be taken into account In the past most related research results were based on using traditional techniques from probability and statistics such as p value based hypothesis testing These techniques led to numerous successful applications but in the last decades several examples have emerged showing that these techniques often lead to unreliable and inaccurate predictions It is therefore necessary to come up with new techniques for processing the corresponding uncertainty that go beyond the traditional probabilistic techniques This book focuses on such techniques their economic applications and the remaining challenges presenting both related theoretical developments and their practical applications

Maluste, 2011-07 Attitudinal change in the context of economic reforms has been referred to in Rodrik and Subramanian 2005 DeLong 2003 Kohli 1989 and Panagariya 2004 2008 This dissertation provides empirical support for this literature establishing an earlier start for India s economic policy liberalisation than presented in stylized accounts It demonstrates the endogenous nature of the origins of these policy shifts Attitudinal change literature had directed attention to the need for further research into India s policy changes of the early 1980s and for studying broader comparability issues in other developing countries This research makes a contribution

towards filling these gaps This dissertation shows that India started its economic liberalisation under the Indira Gandhi administration from 1980 to 1984 These findings depart from the conventional view that India s economic policy changes were initiated by the Narasimha Rao government in 1991 or by the Rajiv Gandhi administration in the mid to late 1980s The dissertation establishes that policy shifts of the early 1980s had endogenous origins in the political leadership s attitudinal changes The Indira Gandhi administration of the early 1980s revisited the statist policies of its previous tenure from 1966 to 1977 The new approach entailed more openness towards private enterprise scaling back the role of the public sector and starting India s integration into the global economy The dissertation also discusses the comparable role of attitudinal changes at the start of China s policy liberalisation led by Deng Xiaoping from 1978 to 1982 It focuses on the significance and challenges faced by China s political leadership in bringing about societal attitudinal change The dissertation concludes by drawing comparisons between India and China developing a linkage between their endogenous attitudinal changes and economic policy liberalisation
