## **Economic And Medical Evaluation Of Health Care Technologies:**

**Economic and Medical Evaluation of Health Care Technologies** A. J. Culyer, B. Horisberger, 2012-12-06 All too frequently the largest effective barrier to interdisciplinary communication is jargon The symposium whose proceedings appear in the following pages sought of course to eliminate unnecessary and obscurantist jargon but it sought also to do something far more ambitious to confront the intellectual issues that are attached to the use of the word evaluation in medicine and health services To this end a carefully selected group of experts in medicine epidemiology and health economics was invited to present papers They were selected for their reputations either as conceptualizers or as empirical evaluators or the rarest breed of expert as both The context was to be empirical Three procedures were selected that had been subject to evaluation but that posed rather different types of problem The first was the treatment of renal failure by dialysis of various kinds This has a relatively long history of evaluation with a large literature and particularly raises broad policy issues within the health services of Western societies as to the size of programmes to be provided the type location and mix of treatments the selection of patients to receive treatment and the measurement of the success of various strategies The second was the treatment of duodenal ulcer by a new species of drug the histamine H<sub>2</sub> receptor antagonists specifically cimetidine Standards for the Socioeconomic Evaluation of Health Care Services Bryan R. Luce, Anne Elixhauser, 2012-12-06 Over the past decades health care delivery once characterized by clearly defined relationships between medical professionals regulators and industry has become much more complex Traditional roles and relationships are changing and new decision makers are entering the scene They bring into the discussion the need for cost containment and the changing perceptions of the public with regard to the risks and benefits of health care outcomes As benefits of medical care are increasingly questioned and as scepticism and fear of advanced technologies are demonstrated by a growing body of people decision making must move beyond medical concerns to encompass economic political and sociological considerations This evolution has also affected the pharmaceutical industry Public perception of responsibility for product safety is no longer limited to regulators and physicians Manufacturers previously unencumbered by social policies governmental preoccupations or public expectations are now held accountable for product safety As a certain amount of risk acceptance is however a prerequisite for the further development of health care goods it has to be carefully balanced against society's demand for safety To weigh risks against benefits to define acceptable risk and to exclude what no longer falls within this category remain perpetual challenges Accordingly health care outcomes have to be assessed not only from a clinical point of view but also from an economic and societal perspective The assessment of drug risks and benefits has become an important political issue world wide *Health Care Technology and Its Assessment in Eight Countries* Mary Adams, 1995-10 Examines the management of health care technology in 8 countries Australia Canada France Germany the Netherlands Sweden the U K the U S Six technologies or sets of technologies including evaluation management efforts how the technologies diffused are

presented compared treatments for coronary artery disease imaging technologies CT MRI scanning laparoscopic surgery treatments for end stage renal disease neonatal intensive care breast cancer screening Extensive bibliography for each country Charts tables *Health Care Technology and Its Assessment in Eight Countries* United States. Congress. Office of Technology Assessment,1995 *The Economics of New Health Technologies* Joan Costa-Font,Christophe Courbage,Alistair McGuire,2009-05-14 Technological change in healthcare has led to huge improvements in health services and the health status of populations It is also pinpointed as the main driver of healthcare expenditure Although offering remarkable benefits changes in technology are not free and often entail significant financial as well as physical or social risks These need to be balanced out in the setting of government regulations insurance contracts and individuals decisions to use and consume certain technologies With this in mind this book addresses the following important objectives to provide a detailed analysis of what technological change is to identify drivers of innovation in several healthcare areas to present existing mechanisms and processes for ensuring and valuing efficiency and development in the use of medical technologies and to analyse the impact of advances in medical technology on health healthcare expenditure and health insurance Each of the seventeen chapters summarizes an important issue concerning the innovation debate and contributes to a better understanding of the role innovation has both at the macro level and at the delivery meso and micro level in the healthcare sector The effectiveness of innovation in improving people s welfare depends on its diffusion and inception by the relevant agents in the health production process and this book recognizes the multi faceted contribution of policy makers regulators managers technicians consumers and patients to this technology change This book offers the first truly global economic analysis of healthcare technologies taking the subject beyond simply economic evaluation and exploring the behavioural aspects organization and incentives for new technology developments and the adoption and diffusion of these technologies **An Introduction To Health** Brian Abel-Smith,2018-10-08 This book concerns itself with the key question how to improve health in a cost effective and politically acceptable way What makes people healthy Why are the poor less healthy than the rich Why do some countries have a better health record than others An Introduction to Health is divided into four parts comprising the determinants of health health service planning health service financing and controlling costs and securing user friendly services **Health care technology and its assessment in eight countries** ,1995 This background paper is part of a larger study on International Differences in Health Care Technology and Spending which consists of a series of back ground papers International Health Statistics What the numbers mean for the United States was published in November 1993 and International Comparisons of Administrative Costs in Health Care appeared in September 1994 An additional background paper will report on lessons for the United States from a comparison of hospital financing and spending in seven countries *Methods for the Economic Evaluation of Health Care Programmes* M. F. Drummond,2005 This highly successful textbook is now available in its third edition Over the years it has become the standard textbook in the field world wide It mirrors the

huge expansion of the field of economic evaluation in health care since the last edition was published in 1997 This new edition builds on the strengths of previous editions being clearly written in a style accessible to a wide readership Key methodological principles are outlined using a critical appraisal checklist that can be applied to any published study The methodological features of the basic forms of analysis are then explained in more detail with special emphasis of the latest views on productivity costs the characterisation of uncertainty and the concept of net benefit The book has been greatly revised and expanded especially concerning analysing patient level data and decision analytic modelling There is discussion of new methodological approaches including cost effectiveness acceptability curves net benefit regression probabilistic sensitivity analysis and value of information analysis There is an expanded chapter on the use of economic evaluation including discussion of the use of cost effectiveness thresholds equity considerations and the transferability of economic data This new edition is required reading for anyone commissioning undertaking or using economic evaluations in health care and will be popular with health service professionals health economists pharmacand health care decision makers It is especially relevant for those taking pharmacoeconomics courses *Anticipating and Assessing Health Care Technology* ,2012-12-06

This report *Anticipating and Assessing Health Care Technology* is the first report from the STG Commission on Future Health Care Technology The STG Stuurgroep Toekomstscenarios Gezondheidszorg was established in 1983 as an independent advisory group to the State Secretary for Welfare Public Health and Cultural Affairs WVC to assist in long range health planning efforts Thus far STG commissions have examined cardiovascular disease cancer aging and life styles as issues of importance to the health of the Dutch population in the future Obviously health care technology is of great concern to the government On the one hand technology is one of the major tools to promote a healthy population On the other hand the costs of health care have been rising at an alarming rate in recent years It was these two facts along with the social consequences of certain technologies such as genetic screening that led the STG to establish the Commission on Future Health Care Technology in 1985 The European Office of the World Health Organization EURO cosponsored the project The Health Council Gezondheidsraad agreed to cooperate with the project by furnishing space and intellectual and logistical support The goal of the Commission's work is to develop sufficient information on future technological developments in health and health care to assist planning for their consequences Subsequent reports will give more detail on future health care technologies and will provide in depth assessments on a few specific technological areas Cost-effectiveness in Health and Medicine United States. **The Economics of Medical Technology** Frans F.H. Rutten, Stanley J. Reiser, 2012-12-06 Technological development has created major possibilities for the treatment of disease and for the disabled The cost of new technologies has added considerably to health care cost inflation which still exceeds the growth rates of most national economies The share of national resources devoted to health care is still rising although at a lesser pace than in the seventies Therefore the use of medical technology confronts us with some of the major dilemmas in society today The routine and intensive use of technology has transformed the most basic interpersonal and social features of medicine It has altered the means through which patient and doctor communicate about illness as well as the content of this communication changed the doctor's relationship to medical colleagues by increasing his dependence on them altered the place and form of practice by creating advantages for the centralization of medical care in complex organizations and created for society new responsibilities and powers to influence the context and scope of medical practice
