Economics 2 The System In Action:

The Theory Of Social And Economic Organization Max Weber, 2009-11-24 This book is an introduction to Max Weber's ambitious comparative study of the sociological and institutional foundations of the modern economic and social order. In this work originally published in German in 1920, Weber discusses the analytical methods of sociology and at the same time presents a devastating critique of prevailing sociological theory and of its universalist determinist underpinnings. None of Weber's other writings offers the reader such a grasp of his theories, none displays so clearly his erudition, the scope of his interests, and his analytical powers.

The Evolution of Economic and Innovation Systems Andreas Pyka, John Foster, 2015-03-03 This book is at the cutting edge of the ongoing neo-Schumpeterian research program that investigates how economic growth and its fluctuation can be understood as the outcome of a historical process of economic evolution. Much of modern evolutionary economics has relied upon biological analogy, especially about natural selection. Although this is valid and useful, evolutionary economists have increasingly begun to build their analytical representations of economic evolution on understandings derived from complex systems science. In this book, the fact that economic systems are necessarily complex adaptive systems is explored both theoretically and empirically in a range of contexts. Throughout, there is a primary focus upon the interconnected processes of innovation and entrepreneurship, which are the ultimate sources of all economic growth. Twenty-two chapters are provided by renowned experts in the related fields of evolutionary economics and the economics of innovation.

Economic Models and Algorithms for Distributed Systems Dirk Neumann, Mark Baker, Jörn Altmann, Omer F. Rana, 2010-02-13 Distributed computing paradigms for sharing resources such as Clouds, Grids, Peer-to-Peer systems, or voluntary computing are becoming increasingly popular. While there are some success stories such as PlanetLab, OneLab, BOINC, BitTorrent, and SETI@home, a widespread use of these technologies for business applications has not yet been achieved. In a business environment, mechanisms are needed to provide incentives to potential users for participating in such networks. These mechanisms may range from simple non-monetary access rights, monetary payments, to specific policies for sharing. Although a few models for a framework have been discussed in the general area of a Grid Economy, none of these models has yet been realised in practice. This book attempts to fill this gap by discussing the reasons for such limited take-up and exploring incentive mechanisms for resource sharing in distributed systems. The purpose of this book is to identify research challenges in successfully using and deploying resource sharing strategies in open source and commercial distributed systems.

Social and Economic Networks Matthew O. Jackson, 2008 Jackson also describes the varied statistical and modeling techniques used to analyze social networks.

Modeling Complexity in Economic and Social Systems Frank Schweitzer, 2002 Economics and the social sciences are in fact the hard sciences, as Herbert Simon argued, because the complexity of the problems dealt with cannot simply be reduced to analytically solvable models or decomposed into separate

subprocesses Nevertheless in recent years the emerging interdisciplinary sciences of complexity have provided new methods and tools for tackling these problems ranging from complex data analysis to sophisticated computer simulations In particular advanced methods developed in the natural sciences have recently also been applied to social and economic problems The twenty one chapters of this book reflect this modern development from various modeling perspectives such as agent based models evolutionary game theory reinforcement learning and neural network techniques time series analysis non equilibrium macroscopic dynamics and for a broad range of socio economic applications market dynamics technological evolution spatial dynamics and economic growth decision processes and agent societies They jointly demonstrate a shift of perspective in economics and the social sciences that is allowing a new outlook in this field to emerge
