Economics And The Conservation Of Global Biological Diversity:

Economics and the Conservation of Global Biological Diversity Katrina Brown, Global Environment Facility, World Bank, 1993 This paper explores the relationship between economics and biodiversity conservation with minimal recourse to jargon making the issue accessible even to the non economist It deals with the concepts of cost and benefit as they apply to biodiversity Since biodiversity is an area where no clear measure of benefits exists the process of project selection for a financial mechanism such as the Global Environment Facility GEF becomes especially complex *Economics and the Conservation of Global Biological Diversity*, 1990

Economics and the Conservation of Global Biological Diversity K. Brown, 1993

The Economic Value of Biodiversity David Pearce, Dominic Moran, 2013-11-05 Biodiversity loss is one of the major resource problems facing the world and the policy options available are restricted by inappropriate economic tools which fail to capture the value of species and their variety This study describes in non technical terms how cost benefit analysis techniques can be applied to species and species loss and how they provide a measure of the efficiency of conservation measures Only when conservation can be shown to pass such a basic economic test the authors claim will it be incorporated into policies David Pearce has also written *Blueprint for a Green Economy*

Nature in the Balance Dieter Helm, Cameron Hepburn, 2014 This book addresses the economic and policy issues involved in biodiversity protection It brings together conceptual and empirical work on valuation international agreements the policy instruments and the institutions

Economics and the Conservation of Global Biological Diversity: a Report to the Global Environment Facility, 1993

The Economics of Biodiversity and Ecosystem Services Shunsuke Managi, 2012 First Published in 2012 Routledge is an imprint of Taylor Francis an informa company

Biodiversity Loss Charles Perrings, 1997-01-28 This volume reports key findings of the Biodiversity Program of the Royal Swedish Academy of Sciences Beijer Institute The program brought together a number of eminent ecologists and economists to consider the nature and significance of the biodiversity problem

In encouraging collaborative work between these closely related disciplines it sought to shed new light on the concept of diversity the implications of biological diversity for the functioning of ecosystems the driving forces behind biodiversity loss and the options for promoting biodiversity conservation The results of the program are surprising It is shown that the core of the biodiversity problem is a loss of ecosystem resilience and the insurance it provides against the uncertain environmental effects of economic and population growth This is as much a local as a global problem implying that biodiversity conservation offers benefits that are as much local as global The solutions as well as the causes of biodiversity loss lie in incentives to local users

The Use of Economic Measures in National Biodiversity Strategies and Action Plans Lucy Emerton, 2001 Economic forces underlie and explain much biodiversity degradation and loss and economic instruments provide a useful set of tools for strengthening biodiversity conservation sustainable use and equitable benefit sharing If National Biodiversity Strategies and Action Plans are to be effective they must be justifiable in economic terms This document reports on a project reviewing the use of economic measures in NBSAPs It brings together the component activities of the economics review and summarizes and synthesizes this information to provide guidance on experiences lessons learned and ways forward in the use of economic measures

Paradise Lost? Edward B. Barbier, Joanne C. Burgess Barbier, Carl Folke, 2019-09-18 Originally published in 1994 *Paradise Lost* is the outcome of a unique collaboration between economists and ecologists initiated by the Beijer Institute of the Royal Swedish Academy of Sciences The book examines how the loss of biodiversity is one of the most serious problems the world faces and suggests that new interdisciplinary thinking is required to safeguard both us and the biosphere from the effects of species extinction The book examines how an integrated interdisciplinary approach to the conservation of biodiversity can understand and tackle the issue It provides an overview of the causes of the problem and examines previous approaches to dealing with it The book also addresses how the loss of biodiversity affects natural systems and provides an examination of environmental policy while discussing how this has been affected by the ecological limits to economic activity This book will be of interest to both academics and students of environmental sciences economics and politics

Biodiversity in the Green Economy Alexandros Gasparatos, Katherine J. Willis, 2015-06-05 In the past decade the growing realization that biodiversity and human wellbeing are inextricably linked has led to the adoption of numerous environmental policies The concept of the Green Economy has gained particular attention as an economic system where growth is possible within environmental limits The preservation of ecosystem services and the halt of biodiversity loss are identified as key pillars of the Green Economy Despite the concept's momentum there is still no clear understanding of how biodiversity fits within a Green Economy In the current debate biodiversity is rarely acknowledged in economic sectors other than agriculture forestry fisheries and tourism and when it is acknowledged biodiversity and its conservation feature more as buzzwords than as concrete and tangible components of the Green Economy This book aims to identify understand and offer pragmatic recommendations of how biodiversity conservation can become an agent of green economic development This

book establishes ways to assess biodiversity's contributions to the economy and to meaningfully integrate biodiversity concerns in green economy policies Biodiversity Conservation Charles A. Perrings, Karl-Göran Mäler, Carl Folke, C.S. Holling, Beng-Owe Jansson, 2012-12-06 This book reports the more policy oriented results of the Biodiversity programme of the Royal Swedish Academy of Sciences Beijer Institute The programme brought economists and ecologists together to consider where the problem in biodiversity loss really lies what costs it has for society and how it might best be addressed The results are strikingly different from those reported in other works on the subject Biodiversity loss matters for all ecosystems not just the megadiversity tropical forests And it matters because it compromises the resilience and so the productivity of those systems Biodiversity conservation requires the development of policies that change the behaviour of resource use everywhere not just in parks and reserves The book is required reading for researchers and policy makers alike It canvasses options for the reform of park management biodiversity conservation projects property rights tax trade and price regimes that are within the reach of governments everywhere **Economic Valuation of Biodiversity** Bartosz Bartkowski, 2017-05-18 This book provides an ecological economic perspective on the value of diversity in ecosystems Combining insights from various sub disciplines of ecology and environmental ecological economics the author constructs a conceptual framework which identifies the ways in which biodiversity influences human well being are identified and offers a novel unifying perspective on the economic value of biodiversity **The Economics of Ecosystems and Biodiversity in Business and Enterprise** Joshua Bishop, 2013-06-17 This book is a product of the TEEB study The Economics of Ecosystems and Biodiversity It provides important evidence of growing corporate concern about biodiversity loss and offers examples of how leading companies are taking action to conserve biodiversity and to restore ecosystems This book reviews indicators and drivers of biodiversity loss and ecosystem decline and shows how these present both risks and opportunities to all businesses It examines the changing preferences of consumers for nature friendly products and services and offers examples of how companies are responding The book also describes recent initiatives to enable businesses to measure value and report their impacts and dependencies on biodiversity and ecosystem services The authors review a range of practical tools to manage biodiversity risks in business with examples of how companies are using these tools to reduce costs protect their brands and deliver real business value The book also explores the emergence of new business models that deliver biodiversity benefits and ecosystem services on a commercial basis the policy enabling frameworks needed to stimulate investment and entrepreneurship to realize such opportunities and the obstacles that must be overcome The book further examines how businesses can align their actions in relation to biodiversity and ecosystem services with other corporate responsibility initiatives including community engagement and poverty reduction Finally the book concludes with a summary and recommendations for action *Sustaining Biodiversity and Ecosystem Functions* Clement A. Tisdell, 2015-10-30 The stock of the world's biological diversity and the state of its ecosystems are major determinants of the availability of commodities both

essential and desirable for human life This leading edge study provides an overarching and balanced approach to the economics of biological conservation considering man made and natural components and their interdependence Recognising the deficiencies of many contemporary studies which focus almost entirely on natural capital Clement Tisdell utilizes the concept of heritage biological capital including germplasm as part of his analysis of changes in the stock of biological capital This comprehensive synthesis casts doubt upon some propositions and policies for resource conservation recommended by eminent ecologists in areas such as GM crops and livestock husbandry as well as agroecosystems and the concept of sustainable agricultural intensification The propositions presented are lent strength by the author s decision to relate his analysis to pertinent contemporary institutional developments and scientific advances The broad scope and rational scepticism with which this book has been compiled make it an ideal read for economists interested in ecological and environmental economics natural scientists with an interest in biodiversity conservation and higher level policy makers in ecological and environmental fields The Economics and Ecology of Biodiversity Decline Timothy M. Swanson, 1998-06-25

Essays by economists and ecologists debate the causes and consequences of biodiversity decline **Saving Biological Diversity** Robert A. Askins, Glenn D. Dreyer, Gerald R. Visgilio, Diana M. Whitelaw, 2008-09-22 The Goodwin Niering Center for Conservation Biology and Environmental Studies at Connecticut College is a comprehensive interdisciplinary program that builds on one of the nation s leading undergraduate environmental studies programs The Center fosters research education and curriculum development aimed at understanding contemporary ecological challenges One of the major goals of the Goodwin Niering Center is to enhance the understanding of both the College community and the general public with respect to ecological political social and economic factors that affect natural resource use and preservation of natural ecosystems To this end the Center has offered six conferences at which academicians representatives of federal and state government people who depend on natural resources for their living and individuals from non government environmental organizations were brought together for an in depth interdisciplinary evaluation of important environmental issues On April 6 and 7 2007 the Center presented the Elizabeth Babbott Conant interdisciplinary conference on Saving Biological Diversity Weighing the Protection of Endangered Species vs Entire Ecosystems The Beaver Brook Foundation Audubon Connecticut the state office of the National Audubon Society the Connecticut Chapter of The Nature Conservancy Connecticut Forest and Park Association and the Connecticut Sea Grant College Program joined the Center as conference sponsors During this two day conference we learned about conservation and endangered species from a wider range of perspectives Like all of the conferences sponsored by the Goodwin Niering Center this conference was broadly interdisciplinary with presentations by economists political scientists and conservation biologists **The Economics of Ecosystems and Biodiversity: Ecological and Economic Foundations** Pushpam Kumar, 2012-12-20 Human well being relies critically on ecosystem services provided by nature Examples include water and air quality regulation nutrient cycling and decomposition plant

pollination and flood control all of which are dependent on biodiversity They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system so their loss is often not detected and continues unaddressed and unabated This in turn not only impacts human well being but also seriously undermines the sustainability of the economic system It is against this background that TEEB The Economics of Ecosystems and Biodiversity project was set up in 2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues This book written by a team of international experts represents the scientific state of the art providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity and showing how these can be mainstreamed into public policies This volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive forward the biodiversity conservation agenda for the next decade
