

Molecules with alternating singles and double bonds, X = Hydrogen; Heteroatom; conjugated group, cyclic aromatic group. Y = Carbon; heteroatom, cyclic aromatic group.

p orbitals along the backbone, each one contains one electron

Overlapping of $3n$ atomic p orbitals generates $3n$ molecular orbitals, $3n/2$ are occupied by $3n$ electrons, $3n/2$ are empty

X, Y = Hydrogen, Carbon

X or Y = heteroatom: no bonding orbitals (green colored), containing electron couples, sit between the n occupied and n empty orbitals, lowering the ΔE .

X = conjugated group: orbitals containing electron couples and empty orbitals (green color) sit between the n occupied and n empty orbitals, lowering the ΔE .

Modifications of Electronic Properties of Conjugated Polymers David James Irvin, 1998 **Electronic Properties of Conjugated Polymers**, 1987 Electronic Properties of Conjugated Polymers Hans Kuzmany, Michael Mehring, Siegmund Roth, 2012-12-06 This book deals with electrical electrochemical structural magnetic optical and lattice dynamical properties of conjugated polymers such as polyaniline polyacetylene polydiacetylene polypyrrole polyparaphenylene and polythiophene Several new conjugated systems and model polyenes are also considered Since the previous winter school on this topic held in 1985 the focus of interest in the field has broadened and now covers not only conductivity and relaxation phenomena of polyacetylene but also nonlinear optical properties highly oriented and single crystal polymers and electrochemical and opto electrochemical properties of special materials Particular attention is paid in this volume to the possible applications of these systems for example in electrochemical cells as electrode materials and in nonlinear optics devices which now appear to be much more realistic than previously The detailed contributions are complemented by short reviews of thin film polymers Langmuir Blodgett layers filled polymers ferromagnetic polymers superconducting low dimensional systems including organic superconductors and high temperature superconductors and the application of fractal models to polymers

Electronic Properties of Conjugated Polymers III Hans Kuzmany, Michael Mehring, Siegmund Roth, 1989-11-02 This book deals with electrical electrochemical structural magnetic optical and lattice dynamical properties of conjugated polymers such as polyaniline polyacetylene polydiacetylene polypyrrole polyparaphenylene and polythiophene Several new conjugated systems and model polyenes are also considered Since the previous winter school on this topic held in 1985 the focus of interest in the field has broadened and now covers not only conductivity and relaxation phenomena of polyacetylene but also nonlinear optical properties highly oriented and single crystal polymers and electrochemical and opto electrochemical properties of special materials Particular attention is paid in this volume to the possible applications of these systems for example in electrochemical cells as electrode materials and in nonlinear optics devices which now appear to be much more realistic than previously The detailed contributions are complemented by short reviews of thin film polymers Langmuir Blodgett layers filled polymers ferromagnetic polymers superconducting low dimensional systems including organic superconductors and high temperature superconductors and the application of fractal models to polymers **Electronic**

R. Blythe, David Bloor, 2005-06-10 Fully revised and expanded this second edition of A Blythe s successful title on electrical properties of polymers covers both the fundamental and recent developments in this growing area This book provides a broad and comprehensive account on the topic describing underlying physical principles and synthesis through to emerging technologies The new edition provides particular emphasis to the new generation of conductive polymers Emerging uses of polymers in industrial applications are described and cover topics such as light emitting diodes flexible polymers and soft electronics Written in an accessible style without complicated theory this book combines key concepts with applications With the inclusion of further reading material provided at the end of each chapter for interested readers this book is an authoritative guide to advanced level undergraduates and graduates studying polymer materials and physical sciences It will also be of significant interest to researchers working in this evolving field *Organic Electronic Materials* R. Farchioni, 2001-05-22 This review and tutorial offers a well balanced survey of the fundamental ideas and relevant trends in modern research on both conducting polymers and organic molecular crystals The reviews provide a more complete understanding of the underlying physics of the materials through the discussion of selected interconnected topics The volume

Electronic Properties of Polymers Hans Kuzmany,Michael Mehring,Siegmar Roth,2012-12-06 The International Winter School on Electronic Properties of Polymers Orientation and Dimensionality of Conjugated Systems held March 9 16 1991 in Kirchberg Tyrol Austria was a sequel to three meetings on similar subjects held there The 1991 winter school was again organized in cooperation with the Bundesministerium für Wissenschaft und Forschung in Austria and with the Bundesministerium für Forschung und Technologie in the Federal Republic of Germany The basic idea of the meeting was to provide an opportunity for experienced scientists from universities and industry to discuss their most recent results and for students and young scientists to become familiar with the present status of research and applications in the field Like the previous winter schools on polymers this one concentrated on the electronic structure and potential for application of polymers with conjugated double bonds This time however special attention was paid to the effects of orientation and dimensionality Anisotropy of the electric conductivity in stretch oriented samples and whether the transport mechanisms are one two or three dimensional or might even have a fractal dimensionality were therefore central topics The problem of orientation was extended to systems such as Langmuir Blodgett films and other layered structures Accordingly thin films were the focus of most of the application oriented contributions Whereas in the previous winter schools discussions on applications dealt with large volume applications such as electromagnetic shielding and energy storage this time molecular materials for electronics and prospects of molecular electronics were at the center of interest *Handbook of Conducting Polymers, Second Edition*, Terje A. Skotheim,1997-11-24 Discussing theory and transport synthesis processing properties and applications this second edition of a standard resource covers advances in the field of electrically conducting polymers and contains more than 1500 drawings photographs tables and equations Maintaining the style of presentation and depth of coverage that made the first edition so popular it contains the authoritative contributions of an interdisciplinary team of world renowned experts encompassing the fields of chemistry physics materials science and engineering The Handbook of Conducting Polymers highlights progress delineates improvements and examines novel tools for polymer and materials scientists **Optical and Electronic Properties of Fullerenes and Fullerene-Based Materials** Joseph Shinar,1999-11-24 This text covers a host of fullerene applications including nanotubes compounds of fullerenes with other elements and structures and polymerized fullerenes It discusses properties of photoexcited states of fullerenes neutral and charged states nonlinear optical response NLO and electron electron interactions
