millimetres and angles at the bases 75 and 62 by actual measurement the learner finds that all the sides opposite to the angles of 75 are equal and likewise those opposite to the angles of 62 and that the remaining angles of the triangles have the same magnitude Analogous constructions and measurements being repeated in a number of cases the learner as a matter of inductive observation feels himself justified in making the generalization expressed in the enunciation of Euclid I 26 In the process the intellectual interest and curiosity of the pupil are excited and in reaching the conclusion he feels almost as if he had made the discovery himself If subsequently geometrical forms are presented to him where he can utilize his previous conclusion he feels with keenness the value of his previous work He has in fact been going through the process of induction and deduction the process through which every scientific discoverer goes with in miniature the emotions of the investigator About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *Text-Book of Elementary Plane Geometry, Tr. by R.
