well constructed introduction to the serious study of mathematics this book requires no background beyond high school courses in plane geometry and elementary algebra From that starting point it is designed to lead readers willing to work through its exercises and problems to the achievement of basic mathematical literacy The text provides a fundamental orientation in modern mathematics an essential vocabulary of mathematical terms and some facility in the use of mathematical concepts and symbols From there readers will be equipped to move on to more serious work and they will be well on the way to having the tools essential for work in the physical sciences engineering and the biological and social sciences Starting with elementary treatments of algebra logic and set theory the book advances to explorations of plane analytic geometry relations and functions numbers and calculus Subsequent chapters discuss probability statistical inference and abstract mathematical theories Each section is enhanced with exercises in the text and problems at the end Answers to the exercises and some of the problems are included at the end of each section *Mathematics Magazine*, 1965 Basic

Concepts of Calculus John Meigs Hubbell Olmsted, 1968 The Collected Papers of R.h. Bing R. H. Bing, 1988 A powerful mathematician and a great problem solver R H Bing laid the foundation for a number of areas of topology Many of his papers have continued to serve as a source of major theoretical developments and concrete applications in recent years One outstanding example was Michael H Freedman's use of Bing's Shrinking Criterion to solve the four dimensional Poincare Conjecture This two volume set brings together over one hundred of Bing's research expository and miscellaneous papers These works range over a great variety of topics in topology including the topology of manifolds decomposition spaces continua metrization general topology and geometric topology In addition there are a number of papers in the areas of convex functions linearity and conformal varieties The introductory section in the first volume provides historical background on Bing's life and achievements This collection will appeal to mathematicians in all areas and especially those in topology as well as students historians and educators in the mathematical sciences for it provides a complete historical summary of the mathematical events in the life of the man and the mathematician R H Bing *Abstract Algebra, SECOND EDITION*
