Elementary Standard ML G Michaelson, 2004-01-10 Standard ML has become the principal teaching language for introducing functional programming This textbook places emphasis on teaching the essential features of ML with extensive practical examples and is intended for undergraduates studying functional programming with Standard ML Elementary Standard ML G Michaelson, 2018-10-08 This book is concerned with programming in the language Standard ML SML that is using SML to make precise models for computer animation It draws on the distinction between programming in the small and in the large plumping exclusively for the former Programming with Standard ML Colin Myers, Chris Clack, Ellen Poon, 1993 Software Programming Languages **Elementary Standard ML** Greg Michaelson, 1995 **Theories of Programming Languages** John C. Reynolds, 1998-10-13 First published in 1998 this textbook is a broad but rigourous survey of the theoretical basis for the design definition and implementation of programming languages and of systems for specifying and proving programme behaviour Both imperative and functional programming are covered as well as the ways of integrating these aspects into more general languages Recognising a unity of technique beneath the diversity of research in programming languages the author presents an integrated treatment of the basic principles of the subject He identifies the relatively small number of concepts such as compositional semantics binding structure domains transition systems and inference rules that serve as the foundation of the field Assuming only knowledge of elementary programming and mathematics this text is perfect for advanced undergraduate and beginning graduate courses in programming language theory and also will appeal to researchers and professionals in designing or implementing computer languages **Lectures on Concurrency and Petri Nets** Jörg Desel, Wolfgang Reisig, Grzegorz Rozenberg, 2004-07-09 This tutorial volume originates from the 4th Advanced Course on Petri Nets ACPN 2003 held in Eichsttt Germany in September 2003 In addition to lectures given at ACPN 2003 additional chapters have been commissioned to give a well balanced presentation of the state of the art in the area This book will be useful as both a reference for those working in the area as well as a study book for the reader who is interested in an up to date overview of research and development in concurrent and distributed systems of course readers specifically interested in theoretical or applicational aspects of Petri nets will appreciate the book as well Improving Assessment through Student Involvement Nancy Falchikov, 2013-04-15 The assessment of students an activity central to the role of any professional in further and higher education and is an area that is the subject of constant innovation and debate This book provides a scholarly account of the many facets of assessment with a particular focus on student involvement Peer and self assessment are powerful assessment tools to add to the existing tutor based methods of assessment and feedback and this book is a comprehensive guide to the the methods and issues involved Practical and accessible in style yet grounded in research and rich in evidence based material Improving Assessment Through Student Involvement will be valued by all FE or HE professionals wanting to enhance both the effectiveness and quality of their

Heering, 1994-07-28 This volume contains the final revised versions of the best papers presented at the First International Workshop on Higher Order Algebra Logic and Term Rewriting HOA 93 held in Amsterdam in September 1993 Higher Order methods are increasingly applied in functional and logic programming languages as well as in specification and verification of programs and hardware The 15 full papers in this volume are devoted to the algebra and model theory of higher order languages computational logic techniques including resolution and term rewriting and specification and verification case studies in total they provide a competently written overview of current research and suggest new research directions in this vigorous area **Elementary Quantitative**

Analysis Hobart Hurd Willard, Nathaniel Howell Furman, 1935 ESOP '92 Bernd Krieg-Brückner, 1992-02-19 This volume contains selected papers presented at the European Symposium on Programming ESOP held jointly with the seventeenth Colloquium on Trees in Algebra and Programming CAAP in Rennes France February 26 28 1992 the proceedings of CAAP appear in LNCS 581 The previous symposia were held in France Germany and Denmark Every even year as in 1992 CAAP is held jointly with ESOP ESOP addresses fundamental issues and important developments in the specification and implementation of programming languages and systems It continues lines begun in France and Germany under the names Colloque sur la Programmation and the GI workshop on Programmiersprachen und Programmentwicklung The programme committee received 71 submissions from which 28 have been selected for inclusion in this volume **Applied Semantics**

Gilles Barthe, Peter Dybjer, Luis Pinto, João Saraiva, 2003-08-02 This book is based on material presented at the international summer school on Applied Semantics that took place in Caminha Portugal in September 2000 We aim to present some recent developments in programming language research both in semantic theory and in implementation in a series of graduate level lectures The school was sponsored by the ESPRIT Working Group 26142 on Applied Semantics APPSEM which operated between April 1998 and March 2002 The purpose of this working group was to bring together leading researchers both in semantic theory and in implementation with the specific aim of improving the communication between theoreticians and practitioners The activities of APPSEM were structured into nine interdisciplinary themes A Semantics for object oriented programming B Program structuring C Integration of functional languages and proof assistants D Verification methods E Automatic program transformation F Games sequentiality and abstract machines G Types and type inference in programming

H Semantics based optimization I Domain theory and real number computation These themes were identified as promising for profitable interaction between semantic theory and practice and were chosen to contribute to the following general topics description of existing programming language features design of new programming language features implementation and analysis of programming languages transformation and generation of programs verification of programs The chapters in this volume give examples of recent developments covering a broad range of topics of interest to APPSEM A Practical Course in Functional Programming Using ML Richard Bosworth,1995 The functional programming language ML is becoming the main medium for teaching functional ideas in a university environment This book is introductory and adopts an incremental approach whilst the coverage is problem oriented at each stage a problem is introduced which can be solved by the techniques the book teaches Beginning with a historical perspective and an introduction to simple functions the book goes on to cover areas such as recursive functions dynamic types and higher order functions A real life case study is included

Types and Programming Languages Benjamin C. Pierce,2002-01-04 A comprehensive introduction to type systems and programming languages A type system is a syntactic method for automatically checking the absence of certain erroneous behaviors by classifying program phrases according to the kinds of values they compute The study of type systems and of programming languages from a type theoretic perspective has important applications in software engineering language design high performance compilers and security This text provides a comprehensive introduction both to type systems in computer science and to the basic theory of programming languages The approach is pragmatic and operational each new concept is motivated by programming examples and the more theoretical sections are driven by the needs of implementations Each chapter is accompanied by numerous exercises and solutions as well as a running implementation available via the Web Dependencies between chapters are explicitly identified allowing readers to choose a variety of paths through the material The core topics include the untyped lambda calculus simple type systems type reconstruction universal and existential polymorphism subtyping bounded quantification recursive types kinds and type operators Extended case studies develop a variety of approaches to modeling the features of object oriented languages A Decade of Concurrency J.W.de Bakker,W.-P.de Roever,G. Rozenberg,1994-06-28 The REX School Symposium A Decade of Concurrency Reflections and Perspectives was the final event of a ten year period of cooperation between three Dutch research groups working on the foundations of concurrency Ever since its inception in 1983 the goal of the project has been to contribute to the cross fertilization between formal methods from the fields of syntax semantics and proof theory aimed at an improved understanding of the nature of parallel computing The material presented in this volume was prepared by the lecturers and their coauthors after the meeting took place In total the volume constitutes a thorough state of the art report of the research activities in concurrency
