Eleonoras Falcon Adaptations To Prey And Habitat In A Social Raptor:

Eleonora's Falcon Harmut Walter, 1979-05 Named after a Sardinian princess of the fourteenth century who established laws protecting falcons Eleonora's falcon is the only European bird to breed in autumn and feed its brood on the mass of birds that migrate from Europe to Africa between July and October It breeds on small Mediterranean islands in colonies of up to 200 pairs and hunts often in groups preying on more than 90 species of migrant birds During the winter this falcon visits the rain soaked woodlands of Madagascar In this study illustrated beautifully and extensively with 59 line drawings and 38 photographs Hartmut Walter shows how the unique geographical and biological situation of *Falco eleonora* makes the species health an important indicator of environmental decay For though it lives in relatively isolated areas Eleonora's falcon nevertheless may ingest the many pollutants contained in its diet of birds migrating from industrial Europe Walter who has studied raptors on several continents and has been an ornithologist since his early youth examines several discrete colonies of Eleonora's falcon He concentrates on the species intraspecific behavior and ecology such as the falcons aggressive actions hunting strategies and response to fluctuating environmental conditions and investigates their evolutionary past

Australian High Country Raptors Jerry Olsen, 2014-06-18 Australian High Country Raptors covers raptor species that regularly breed in the high country above 600 metres from Goulburn in New South Wales down to the hills outside Melbourne Victoria Author Jerry Olsen explores the nature of these striking animals that are classified as Accipitriformes diurnal hawks falcons kites and eagles Falconiformes and Strigiformes nocturnal owls Comparisons between these high country raptors and lower elevation breeders are also provided in addition to comparisons with raptors found overseas especially from North America and Europe The book begins with a description of habitats and vegetation types in the high country and which raptors are likely to be seen in each habitat type It continues with sections on finding and watching raptors raptor identification hunting styles food breeding and behaviour and conservation Appendices provide species accounts for diurnal breeding species in the high country with basic information about their ecology distribution and conservation as well as detailed instructions about handling an injured or orphaned raptor Illustrated throughout with photographs and drawings Australian High Country Raptors offers readers a chance to look into the lives of Australia's fascinating birds of prey

The Goshawk Robert Kenward, 2010-01-30 A large and spectacular bird of prey the Goshawk lives in boreal forests throughout the Northern hemisphere The Goshawk is an authoritative yet highly readable monograph of the species A powerful hunter of large birds and woodland mammals it was persecuted for many years by game keepers to the point of extinction in the UK However escaped falconry birds led to the establishment of a new population in the 1960s though the species remains rare and elusive birders need a combination of hard work and a little luck to see this magnificent raptor The Goshawk includes chapters on nomenclature races and morphs biometrics nesting incubation and chick rearing migration feeding ecology population dynamics and conservation punctuated throughout with illuminating tales from author

Robert Kenward's extensive field research. The book is packed with illustrations, figures and maps and contains a selection of the author's superb photographs of the birds. The product of almost 30 years' work, this title is a classic Poyser monograph. Birders will enjoy the fascinating insights into the biology of the bird while academics will appreciate the book's comprehensive literature review. **Species Conservation: A Population-Biological Approach** Seitz, Löschke, 2013-11-21

It is not often that a century of scholarly activity breaks conveniently into halves but ornithology of the first half of the 20th century is clearly different from that of the second half. The break actually can be marked in 1949 with the appearance of Meyer and Schuz's *Ornithologie als Biologische Wissenschaft*. Prior to this ornithologists had tended to speak mostly to other ornithologists; experiments, the testing of hypotheses, were uncommon and a concern for birds as birds was the dominant thread in our thinking. Subsequent to 1949 ornithologists have tended to become ever more professional in their pursuits and to incorporate protocols of experimental biology into their work; more importantly perhaps they have begun to show a concern for birds as agencies for the study of biology. Many of the most satisfying of recent ornithological studies have come from reductionist research approaches and have been accomplished by specialists in such areas as biochemistry, ethology, genetics and ecology. A great many studies routinely rely on statistical hypothesis testing, allowing us to come to conclusions unmarred by wishful thinking. Some of us are ready to tell the world that we are a hard science and perhaps that time is not so very far off for most of us. Volume 2 examines several solid examples of late 20th century ornithology. The Birds of Africa: Volume VIII Roger Safford, Frank Hawkins, 2020-09-17. Universally recognised as by far the most authoritative work ever published on the subject, *The Birds of Africa* is a superb multi-contributor reference work with encyclopaedic species texts, stunning paintings of all species and numerous subspecies, informative line drawings, detailed range maps and extensive bibliographies. Each volume contains an Introduction that brings the reader up to date with the latest developments in African ornithology, including the evolution and biogeography of African birds. Diagnoses of the families and genera, often with superspecies maps, are followed by the comprehensive species accounts themselves. These include descriptions of range and status, field characters, voice, general habits, food and breeding habits. Full bibliographies, acoustic references and indexes complete this scholarly work of reference. This eighth and final volume covers the Malagasy region, which comprises Madagascar and the various islands and archipelagos of the Indian Ocean, including the Seychelles, the Comoros, Mauritius and Réunion. Every resident and migrant species is covered in full detail, comparable to other volumes in the series, and with a colour map for each species. Vagrants are treated in less detail. All species are illustrated on a beautiful series of 64 colour plates with original artwork from John Gale and Brian Small. This is a major work of reference on the birds of the region and

Handbook of Bird Biology Irby J. Lovette,John W. Fitzpatrick,2016-09-19 Selected by Forbes.com as one of the 12 best books about birds and birding in 2016 This much anticipated third edition of the Handbook of Bird Biology is an essential and comprehensive resource for everyone interested in learning more about birds from casual bird watchers to formal students of ornithology Wherever you study birds your enjoyment will be enhanced by a better understanding of the incredible diversity of avian lifestyles Arising from the renowned Cornell Lab of Ornithology and authored by a team of experts from around the world the Handbook covers all aspects of avian diversity behaviour ecology evolution physiology and conservation Using examples drawn from birds found in every corner of the globe it explores and distills the many scientific discoveries that have made birds one of our best known and best loved parts of the natural world This edition has been completely revised and is presented with more than 800 full color images It provides readers with a tool for life long learning about birds and is suitable for bird watchers and ornithology students as well as for ecologists conservationists and resource managers who work with birds The Handbook of Bird Biology is the companion volume to the Cornell Lab's renowned distance learning course www.birds.cornell.edu/courses/home_homestudy **Birds by Night** Graham Martin,2010-10-30 This book examines many examples of the nocturnal behaviour of birds For many people watching and studying birds is exclusively a day time activity However for many birds twilight and night time are not a barrier to useful activity It is true that very few birds are exclusively nocturnal but many birds which are active by day also conduct limited and often crucial activities after dusk Examples range from the occasional night feeding of wildfowl and shorebirds to the night singing and night migration of

certain passerines and from the location of nest sites by sea birds to the nocturnal foraging of owls and nightjars The special cases of flightless nocturnal birds and those birds which dwell in lightless caves are also considered Throughout this survey considers not only what it is that birds do at night but also discusses how these nocturnal activities are possible It brings together studies in field ornithology sensory science ecology and physics and involves comparisons of the sensory capacities of other animals including man It is shown how the senses of hearing smell and touch as well as vision play a crucial role in many of the night time activities of birds However these senses are not always adequate for fully explaining how nocturnal behaviours are executed To achieve this we must look at the complex of relationships between behavioural and sensory adaptations and the particular environments which birds inhabit from dusk to dawn Food Hoarding in Animals Stephen B. Vander Wall, 1990-07-10 In this first comprehensive synthesis of the literature on food hoarding in animals Stephen B Vander Wall discusses how animals store food how they use food and how this use affects individual fitness why and how food hoarding evolved how cached food is lost mechanisms for protecting and recovering cached food physiological and behavioral factors that influence hoarding and the impact that hoarding animals have on plant populations and plant dispersal He then provides detailed coverage of hoarding behavior across taxa mammals birds and arthropods to address issues in evolution ecology and behavior Drawings photographs and appendixes document complex and intrinsically interesting food hoarding behaviors and the bibliography of nearly 1 500 sources is itself an invaluable and unique reference

Bird Migration across the Himalayas Herbert H. T. Prins, Tsewang Namgail, 2017-04-06 The first reference to demonstrate how birds survive the high altitude Central Asian Flyway and the threats to this unique migration **Avian Biology** Donald Farner, 2012-12-02 Avian Biology Volume VIII assesses selected aspects of avian biology It is generally the conceptual descendant of Marshall's earlier treatise Biology and Comparative Physiology of Birds but is more than simply a revision of it This volume consists of two relatively lengthy diverse chapters that focus on adaptive significance of coloniality in birds and fossil records of birds In particular this volume looks into group phenomena related to central place systems that is systems in which one or more individuals move to and from a centrally located place in the course of daily activities It also addresses selective factors that have been suggested to explain why individuals should form colonies rather than disperse within the available foraging space This book will be useful as a reference material for advanced students and instructors in this field of interest
