Politics, Science And Cancer Gerald E. Markle, James C. Petersen, 2019-09-11 At no time in U S history has there been a more effective challenge to medical expertise and authority than that mounted by the contemporary Laetrile movement The efficacy of Laetrile has been debated for over twenty five years but despite vigorous opposition from the medical community support for the purported cancer treatment continues to grow

Honn, Avraham Raz, 2006-04-11 In recent years the pace of research in prostate cancer has increased dramatically Creative ideas in combination with new and emerging technologies have led to an explosion of discovery These types of advances in prostate cancer research presage an era of new treatment strategies based on an understanding of the cellular and molecular mechanisms of disease In creating this book we aimed to cover a broad bench to bedside research spectrum ranging from genetic molecular and cellular analyses to epidemiological studies refinements in local treatment strategies and new biologically based non hormonal treatments for systemic disease Researchers and clinicians will find in this book a group of timely and clinically relevant chapters on prostate cancer research and treatment

The Fear of Freedom Rowan A. Greer, 2010-11 By the fear of freedom Greer means the unconscious flight from the heavy burden of individual choice an open society lays upon its members The miraculous represents a heavenly power brought down to earth and tied to the life of the community Understanding how miracles were perceived in the late antiquity requires us to put aside the notion of a miracle

as the violation of the natural order Miracles for the church fathers refers to anything that evokes wonder Rowan Greer is not concerned with conclusions about the truth or falsity of the miracles reported in the ancient sources He is concerned with how the miracle stories shaped the way people understood Christianity in the fourth and fifth centuries Once the Church gained the predominance in the Empire as part of the Constantinian revolution most Christians thought that a new Christian commonwealth was in the making The miracles associated with the cult of the saints the martyrs and their relics in the Christian Empire were part of this sacralization In the Roman imperial church we find a tension between the Christian message which revolved around virtue and the individual and corporate piety that focused upon the empowering of the people of God With Augustine we find Christian Platonism transformed into a new theology far more congruent with the corporate poetry that had by then developed An emphasis upon grace and upon God s sovereignty fits a preoccupation with miracles better than the old emphasis upon human freedom and virtue and sets the stages for the Western Middle Ages and the cult of the saints organized and made central to Christian piety From a study of Roman imperial Christianity before the collapse of the West we discover the tendency to substitute one kind of freedom for another Freedom as the capacity of human beings to choose the good does not of course disappear but on the whole it is made subordinate to notions of God s sovereign grace and even to an insistence upon the authority of the church

Management of Breast Diseases Ismail Jatoi, Manfred Kaufmann, 2010-02-11 In 2002 Lippincott published the Manual of Breast Diseases edited by Professor Ismail Jatoi The current book Management of Breast Diseases is an adaptation of that manual with Professor Manfred Kaufmann of the Goethe University of Frankfurt serving as co editor Most of the chapters from the original manual have been either extensively revised or discarded and several new chapters added This text contains more material than the original manual but it is still intended as a basic guide for the wide spectrum of clinicians surgeons gynecologists oncologists radiation oncologists internists general practitioners who treat breast diseases both benign and malignant To compile this text we assembled experts from throughout the world Thus this text provides not only a broad overview of breast diseases but also highlights different perspectives from different parts of the world Yet it is worth noting that the management of breast cancer is now largely predicated on evidence based medicine Several large randomized prospective trials have demonstrated the efficacy of breast cancer screening and chemoprevention Other large trials have addressed the impact of systemic therapy radiotherapy and variations in local therapy on breast cancer mortality Many of these landmark trials are discussed in this text and they clearly have had a beneficial effect Indeed since about 1990 breast cancer mortality rates have declined substantially in most industrialized countries and this trend is expected to continue in the years ahead

Management of Prostate Cancer Eric A. Klein,2004-05-07 Although much progress has been made in the four years since the first edition of *Management of Prostate Cancer* prostate cancer remains a significant biological medical and personal challenge for millions of men In this interval some important trends and observations have emerged that represent real progress in the field and which will shape the direction of clinical practice and research in the next 5 10 years These observations include 1 a decline in prostate related cancer mortality in the United States likely owing to a combination of factors including screening more aggressive and earlier therapy and improvements in specific therapies 2 a significant downward pathological stage migration so that an individual's chance of cure for a given stage grade and PSA is better now than it was early in the PSA era even without associated improvements in individual therapies 3 the recognition of new PSA isoforms that may refine screening strategies 4 several randomized phase III clinical trials demonstrating survival advantages of one form of therapy over another in selected populations external beam radiotherapy with adjuvant hormones vs radiotherapy alone radical prostatectomy vs observation 5 a focus on the biology of bone and bone metastasis and new agents that reduce skeletal related events and which may inhibit the growth of new metastases 6 second generation anti PSMA antibodies with improved potential for imaging and therapy 7 the development and widespread adoption of nomograms that assist in clinical decision making for individual patients 8 the identification of new genes that

Cancer and IgE Manuel L. Penichet, Erika Jensen-Jarolim, 2010-01-23 Erika Jensen Jarolim and Manuel L Penichet 1 1 Background Infectious diseases being the major burden in the history of mankind worldwide until the beginning of the 20th century were important triggers in the understanding of immunological mechanisms In contrast to infectious diseases reports of all types of cancers were less common but increased tremendously within the last century Based on the US mortality data of the National Center for Health Statistics Centers for Disease Control and Prevention 2009 a recent report from the American Cancer Society indicated that the number of cancer deaths increased approximately from 100 000 to 550 000 per year between 1930 and 2006 paralleling the increase of the total population during this period Leading causes of death from cancer are lung and bronchus cancer in men prostate cancer and in women breast cancer 1 2 Normalization to population size shows that the cancer death rate for most malignancies has been generally stable although the mortality rate of certain malignancies such as lung and bronchus cancer has increased over the last 50 years 1 3 In allergy the situation is less clear because for the time period around the turn of the 19th century only imprecise information is available However within the last 30 years the incidences of allergies has doubled not only in industrial countries but in developing countries as well 4 **Evaluating Alternative Cancer Therapies** David J. Hess, 1999 At least half a million American cancer patients are using complementary and alternative medicine therapies such as dietary programmes supplements imagery and herbs but little has been done to evaluate these therapies or to provide information about them to the public As North American cancer rates in recent decades have risen so that a person's lifetime risk is now over one in three the questions that patients and clinicians have about alternative treatments have continued to grow How can patients and clinicians make sense of the various options
