Rethinking the Future P. Jeanne Vickers,2024-11-01 Rethinking

the Future is the story of a relationship between two highly original thinkers who achieved great distinction in their chosen fields and in their respective countries After a distinguished career in law civil administration and industrial management Geoffrey Vickers made an exceptional contribution to academic debate with regard to ethics epistemology and governance the art of maintaining stable relationships over time One of the most eminent scholars of political economics in the Western world and a gifted teacher Adolph Lowe inspired generations of economics students at the New School for Social Research in New York and has published a number of seminal books on the subject The friendship between the two was very close taking shape through a correspondence and occasional visits to one side or the other of the Atlantic It lasted more than forty years This volume reflects the extraordinarily wide ranging nature of the correspondence between Lowe and Vickers and the continuing discussion of what it means to be human at the end of the twentieth century The letters provide a personal commentary on some of the major events of this century including many that were highly controversial The book shows how these two scholars contributed to the development of the central ideas of the century They are particularly relevant to present concerns dealing as they do with economics and management social and political sciences governance and public policy Discussing major national and international problems from very different and sometimes opposite standpoints the two men are able through this extraordinary correspondence to formulate ideas of great wisdom and foresight with regard to the world that awaits us as the twenty first century appears on the horizon Economists political scientists and sociologists will find this correspondence stimulating and enlightening *The Universitas Project* Museum of Modern Art (New York, N.Y.),2006 This volume publishes in their entirety the various components of a conference hosted by MoMA in 1972 The Universitas Project The distinguished participants drawn from a wide range of scholarly and artistic disciplines engaged in a multidisciplinary debate on the future of design and design institutions in the postindustrial era Addressing issues and ideas still relevant today this book makes a particularly fertile chapter in the intellectual history of the Museum available for the first time to scholars the architecture and design community and the general public **System Design Modeling and Metamodeling** John P. van Gigch,2013-06-29 This book is a venture in the worlds of modeling and of metamodeling At this point I will not reveal to readers what constitutes metamodeling Suffice it to say that the pitfalls and shortcomings of modeling can be cured only if we resort to a higher level of inquiry called meta inquiry and metadesign We reach this level by the process of abstraction The book contains five chapters from my previous work *Applied General Systems Theory* Harper and Row London and New York First Edition 1974 Second Edition 1978 More than ten years after its publication this material still appears relevant to the main thrust of system design This book is dedicated to all those who are involved in

changing the world for the better In a way we all are involved in system design from the city manager who struggles with the problems of mass transportation or the consolidation of a city and its suburbs to the social worker who tries to provide benefits to the urban poor It includes the engineer who designs the shuttle rockets It involves the politician engaged in drafting a bill to recycle containers or one to prevent pesticide contamination of our food The politician might even need system design to chart his or her own re election campaign

Systems Science Frank A. Stowell, Daune West, James G. Howell, 2012-12-06 As we approach the end of the 20th century we can look back upon the achievements that have been made in a variety of human endeavours with pride Enormous strides have been made to improve the quality of life of millions of people through the application of the scientific discoveries made during this and past centuries The 20th century will be remembered as much for the mass exploitation of scientific discovery as for the discoveries themselves The technological age has meant that the human being is able to contemplate activities which defy nature For example some of the work involved in the preparation of these proceedings has been done whilst travelling at over 500 miles per hour seven miles above the surface of the earth It is not difficult to conjecture about the effect that this relatively recent technology has had upon a number of systems Air transportation has provided a number of benefits including such disparate examples such as enabling holidays famine relief and the cross fertilisation of cultural practices from other lands Equally there have been undesirable effects such as enabling the means of mass destruction interference in other cultures and the speedy transportation of disease Moreover the physical presence of the aeroplane itself represents the consumption of fossil fuels a source of pollution and a change in the way think about life The view expressed here is of course the view of an inhabitant of the western world

Finding Wholeness Through the Science of Connecting Victor MacGill, 2025-01-30 Drawing on the author s decades of experience in social work this book introduces readers to a systems approach to reconnecting in a complex disconnected world applying the Dynamics of Life model The systems sciences allow us to explore how we connect and disconnect which can help us find ourselves again Through his Dynamics of Life model Victor MacGill presents this science in a simple understandable way so that practitioners can build their skills and learn methods to apply with clients The beginning of the book introduces theoretical concepts such as complex adaptive systems living systems and 4e cognition The second half introduces tools for how to manage conflict and to reconnect and rebuild relationships with ourselves individuals family and community The book is a manual for reconnecting ourselves to ourselves others and the world to realise our greater potential An essential resource in a disconnected and fragmented world this book is for anyone in the helping professions including counsellors psychologists social workers and coaches and so forth
