Bilby, 2001-02-16 As the vast expanses of natural forests and the great populations of salmonids are harvested to support a rapidly expanding human population the need to understand streams as ecological systems and to manage them effectively becomes increasingly urgent The unfortunate legacy of such natural resource exploitation is well documented For several decades the Pacific coastal ecoregion of North America has served as a natural laboratory for scientific and managerial advancements in stream ecology and much has been learned about how to better integrate ecological processes and characteristics with a human dominated environment These in sightful but hard learned

ecological and social lessons are the subject of this book Integrating land and rivers as interactive components of ecosystems and watersheds has provided the ecological sciences with important theoretical foundations Even though scientific disciplines have begun to integrate land based processes with streams and rivers the institutions and processes charged with managing these systems have not done so successfully As a result many of the watersheds of the Pacific coastal ecoregion no longer support natural settings for environmental processes or the valuable natural resources those processes create An important role for scientists educators and decision makers is to make the integration between ecology and consumptive uses more widely understood as well as useful for effective management
