Plastics for Corrosion Inhibition
V.A. Goldade, L.S. Pinchuk, A.V. Makarevich, V.N. Kestelman, 2006-03-30 One of the key problems of failure free operation of machinery is prevention of corrosion The global scale of modern production makes this problem even more critical At the beginning of the 21st century industrial contamination and the corrosion active nature of the environment reached a level such that corrosive damage of materials became commensurate with their production volume and expenditure on anticorrosion protection of machines became comparable with investments in basic production Anticorrosion techniques changed from being an auxiliary service to industrial enterprises into a developing scientifically intensive and generously financed branch of production Polymers occupy a very specific place amongst anticorrosion techniques Polymers combine good chemical resistance with impermeability to different media and unusual deformation characteristics The main principle of their application as anticorrosion means is the creation of a tight barrier that insulates metal machine parts or constructions from corrosion agents The advantages of polymers allow the creation of such a barrier at minimal cost providing protection of the working machines from corrosion combining their manufacture with preservation and decreasing the cost of anticorrosion This is one of the main reasons why world production of polymer materials increased by almost 50% in the past decade

Biomimetics in Materials Science Michael Nosonovsky, Pradeep K. Rohatgi, 2011-12-06 Biomimetics in Materials Science provides a comprehensive theoretical and practical review of biomimetic materials with self healing self lubricating and self cleaning properties These three topics are closely related and constitute rapidly developing areas of study The field of self healing materials requires a new conceptual understanding of this biomimetic technology which is in contrast to traditional engineering processes such as wear and fatigue Biomimetics in Materials Science is the first monograph to be devoted to these materials A new theoretical framework for these processes is presented based on the concept of multi scale structure of entropy and non equilibrium thermodynamics together with a detailed review of the available technology The latter includes experimental modeling and simulation results obtained on self healing lubricating

cleaning materials since their emergence in the past decade *Materials Degradation And Its Control By Surface Engineering (2nd Edition)* Andrew William Batchelor, Margam Chandrasekaran, Nee Lam Loh, 2003-03-12 The second edition of *Materials Degradation and Its Control by Surface Engineering* continues the theme of the first edition where discussions on corrosion wear fatigue and thermal damage are balanced by similarly detailed discussions on their control methods e g painting and metallic coatings The book is written for the non specialist with an emphasis on introducing technical concepts graphically rather than through algebraic equations In the second edition the graphic content is enhanced by an additional series of colour and monochrome photographs that illustrate key aspects of the controlling physical phenomena Existing topics such as liquid metal corrosion have been extended and new topics such as corrosion inhibitors added
