Going Nuclear:

Going Nuclear Tim Gregory, 2025-08-05 A bold provocative and knowledgeable case for the importance of nuclear science and how nuclear power is essential to reaching net zero What if net zero is not an environmental challenge but an energy challenge In this visionary book Dr Tim Gregory challenges prevailing narratives around climate change arguing that the goal of net zero is not simply to replace fossil fuels with renewables but to power civilisation using sources of energy that do not emit carbon dioxide He unequivocally shows that only one emissions free energy source can rise to that challenge nuclear power *Going Nuclear* calls for decarbonisation to be the twenty first century's Apollo programme illuminating the far reaching potential of the atom beyond clean energy to advanced medicine forensics atomic gardening and interplanetary exploration By interweaving scientific optimism myth busting data and ambitious policy Gregory offers an alternative nuclear future that can meet the shared goal of environmental stewardship and continued human progress **Going Nuclear**

Leonard S. Spector, 1987 **Will Terrorists Go Nuclear?** Brian Michael Jenkins, 2009-12-02 For more than 30 years Jenkins has been advising the military government and prestigious think tanks on the dangers of nuclear proliferation Now he goes beyond what the experts know to examine how terrorists themselves think about such weapons *Going Forward by Looking Back* Felix Riede, Payson Sheets, 2020-09-11 Catastrophes are on the rise due to climate change as is their toll in terms of lives and livelihoods as world populations rise and people settle into hazardous places While disaster response and management are traditionally seen as the domain of the natural and technical sciences awareness of the importance and role of cultural adaptation is essential This book catalogues a wide and diverse range of case studies of such disasters and human responses This serves as inspiration for building culturally sensitive adaptations to present and future calamities to mitigate their impact and facilitate recoveries **Strategic Thinking, Deterrence and the US Ballistic Missile Defense Project**

Reuben Steff, 2016-04-01 A systematic critical survey of American strategic thinking and the strategic culture in which it is formed In particular this book seeks to interrogate the theory and strategy of nuclear deterrence and its relationship to the concept of missile defence Drawing widely on the theoretical literature in international relations and strategic studies it identifies the key groups that have competed over America's nuclear policy post 1945 and examines how the concept of missile defence went through a process of gestation and intellectual contestation leading to its eventual legitimization in the late 1990s Steff sheds light on the individuals groups institutions and processes that led to the decision by the Bush administration to deploy a national missile defence shield Additionally Steff systematically examines the impact deployment had on the calculations of Russia and China In the process he explains that their reactions under the Bush administration have continued into the Obama era revealing that a new great power security dilemma has broken out This Steff shows has led to a decline in great power relations as a consequence *Asia-Pacific in the New World Order* Christopher Brook, Anthony McGrew, 2013-11-05 *Asia Pacific in the New World Order* critically explores the notion that a distinctive

regional power bloc is developing linking countries bordering the Pacific with East Asia at its core This student friendly volume sheds light on the complex interplay between global regional and national forces which have transformed the Asia Pacific area into one of the most vibrant and economically successful regions in the world Historical narratives alongside geopolitical and geoeconomic perspectives are deployed to examine the shifting pattern of power relations and security structures across the region set within a wider world context Key issues addressed include what are the primary security problems of the region and how are they being resolved does the dynamic growth of the region and particularly the rise of China pose a challenge to existing structures of world order The text has a strong interdisciplinary flavour drawing on analytical approaches from the international relations political economy and political geography literature Authors have been drawn from the Asia Pacific region and the UK and all are established scholars in their specialist fields **Research**

Rethinking Foreign Policy Analysis Stephen G. Walker,Akan Malici,Mark Schafer,2011-01-26 Stephen G Walker Akan Malici and Mark Schafer present a definitive social psychological approach to integrating theories of foreign policy analysis and international relations addressing the agent centered micro political study of decisions by leaders and the structure oriented macro political study of state interactions as a complex adaptive system The links between the internal world of beliefs and the external world of events provide the strategic setting in which states collide and leaders decide The first part of this ground breaking book establishes the theoretical framework of neobehavioral IR setting the stage for the remainder of the work to apply the framework to pressing issues in world politics Through these applications students can see how a game theoretic logic can combine with the operational code research program to innovatively combine levels of analysis The authors employ binary role theory to demonstrate that relying only on a state systemic level or an individual decision making level of analysis leads to an incomplete picture of how leaders steer their ships of state through the hazards of international crises to establish stable relations of cooperation or conflict Reactor development United States. Wisdom and War Harry Dickinson,2016-02-11 Opened in 1873 in buildings constructed by Charles II to house retired sailors the Royal Naval College was founded with the aim of providing officers with the highest possible scientific instruction in all branches of study bearing upon their profession For more than 125 years it taught officers ranging in rank

from Sub Lieutenants to Vice Admiral providing the technical instruction that equipped a corps of naval architects to build some of the most advanced warships in the world and in later years trained the Royal Navy's nuclear engineers. Despite the College's undoubted contribution towards both the education of Royal Navy personnel and technical research more broadly this is the first book to address the history of the institution from its Victorian roots to its closure in the aftermath of the Cold War. Taking a chronological approach the book traces the history of the College from its establishment in 1873 a period during which technical training for a steam powered navy was increasingly vital. It then shows how during the First World War academic staff at the College made a vital contribution to the development of naval weapons systems and its medical school initiated a vaccine production programme that later produced major improvements in the public health of the nation. During the Second World War damaged by enemy action that set London's docklands ablaze the College provided the first taste of naval life for more than 27 000 men and women called from civilian life to serve on shore and at sea. Later chapters conclude with an exploration of the College's post war role focusing particularly on the establishment in 1959 of the Department of Nuclear Science and Technology DNST which ran a nuclear reactor on site until the College was closed in 1998. Both as a history of the Royal Naval College itself and as an exploration of the Navy's attitude toward research and education this book provides a fascinating insight into what is arguably one of Britain's most significant educational establishments.

Non-Proliferation Stockholm International Peace Research Institute, 2020-11-19 Is the appearance of new nuclear weapon states inevitable? Who are the sponsors and apologists of nuclear weapons and why are others in favour of renouncing them? What are the implications for international security of the increasingly wide use of nuclear energy? How can nuclear threats be defused? Originally published in 1985 SIPRI's study suggests some answers to these questions. The book examines the situation in a number of countries of key importance for non proliferation: the two nuclear weapon states which have declined to join the 1968 Non Proliferation Treaty China and France; a group of nuclear threshold states also remaining outside the Treaty Argentina Brazil India Israel Pakistan South Africa and Spain; and a group of states both developed and developing which for various reasons have joined the Treaty Canada Egypt South Korea Sweden Switzerland and Taiwan. The focus of the book is on motivations for and against nuclear proliferation. An analysis of these motivations leads the editor to make detailed recommendations aimed at halting the spread of nuclear weapons. Appendices include a list of nuclear facilities in the countries studied specifying the degree of their coverage by international controls and other relevant documentation.

Thinking about the Unthinkable in a Highly Proliferated World Clark Murdock, Thomas Karako, 2016-08-05 For decades the United States has led the effort to stem the spread of nuclear weapons both among potential adversaries and among its allies and partners. The current state of deterrence and of the nonproliferation regime however is open to many doubts. What happens if the nonproliferation regime should break down altogether? What happens if extended deterrence

should fail and allies no longer believe in the credibility of the U S nuclear umbrella What happens when the world has not 9 but 11 15 18 or even more nuclear powers This study explores how such a world might function and what it would mean for our present conceptions of deterrence for the place of the United States in the international order and for international order itself

The Security Of Korea Franklin B. Weinstein,Fuji Kamiya,2019-06-26 Any discussion of the security of Korea has implications for U S Japan relations but the Carter administration s announcement in 1977 of its intention to withdraw U S ground combat forces from Korea by 1982 which brought to the surface deep rooted Japanese and American frustrations with one another made it clear that neither side fully understood the other s view of Korea This book a collaborative effort by specialists of diverse expertise and viewpoints clarifies U S and Japanese perceptions of the Korean problem and explores alternative approaches to the maintenance of peace and security on the Korean peninsula Demonstrating that much of the conventional wisdom about Korean security rests on oversimplifications exaggerated fears and mistaken assumptions the authors assert that the prospects for avoiding conflict grow brighter despite existing pitfalls and offer recommendations for the U S and Japanese governments

D'Anieri,1999-07-01 In the most detailed study to date of the emerging international political economy of the former Soviet Union Economic Interdependence in Ukrainian Russian Relations analyzes the intractable economic dilemmas facing Russia s neighbors and shows how economic interdependence has become the key axis for the pursuit of power politics in the region Ukraine s quest for complete political autonomy from Russia is in tension with the deep economic interdependence between the two countries and Ukraine s leaders have found that pursuit of three key goals sovereignty prosperity and security often conflict with one another While the years since independence have seen Ukraine consolidate its sovereignty prosperity remains elusive and there remains no long term strategy for maintaining Ukraine s political economy
