**The Evolution of the Long-necked Giraffe (*Giraffa Camelopardalis* L.)** Wolf-Ekkehard Lönning,2011 Darwin 1871 and many African folk legends before him proposed a simple but powerful explanation for the large and elongated shape Long necks allowed giraffe to outreach presumed competitors particularly during dry season bottlenecks when leaves become scarce Simmons and Scheepers However this old African folk legend which is still commonly taught in high schools fails to explain among other things the size differences between males and females Giraffe cows are up to 1.5 meters shorter than the giraffe bulls not to mention the offspring The wide migration range of the giraffe and the low heights of the most common plants in their diet likewise argue against the dominant selection hypothesis Also 1 The fossil links which according to the theory should appear successively and replace each other usually exist simultaneously for long periods of time 2 Evolutionary derivations based on similarities rely on circular reasoning 3 The giraffe has eight cervical vertebrae Although the 8th vertebra displays almost all the characteristics of a neck vertebra as an exception to the rule the first rib pair is attached there 4 The origin of the long necked giraffe by a macromutation is due to the many synorganized structures extremely improbable 5 Sexual selection also lacks a mutational basis and what is more is frequently in conflict with natural selection head clubbing is probably a consequence of a long neck and not a cause see also Mitchell et al 2009 6 In contrast to the thus far proposed naturalistic hypotheses the intelligent design theory is basically testable 7 The long necked giraffes possibly all belong to the same basic type inasmuch as 8 a gradual evolution from the short necked to the long necked giraffe is ruled out by the duplication of a neck vertebra and the loss of a thoracic vertebra 9 Chance mutations are principally not sufficient to explain the origin of the long necked giraffe 10 The intelligent design theory offers an adequate and satisfying solution to the problems and points to numerous old and new research projects 11 Mitchell and Skinner present a good analysis of the selectionist problem however their phylogenetic hypotheses presuppose the correctness of the synthetic evolutionary theory and their claims of intermediate forms are unproven similarly summary Part 2 Part 1 shows why Dawkins and Kutschera are wrong The scientific facts speak for design      Wild Vet Adventures Gabby Wild,2021-03-09 Wildlife veterinarian and super fashionista Dr Gabby Wild takes young readers on a journey around the world to discover amazing animals and how to care for them Travel the continents to meet some of Earth's most incredible critters through the eyes of a windblown adventurous wildlife veterinarian Join Dr Gabby Wild as she performs dental work on a jaguar teaches a baby bird to fend for itself and gives a chimp a checkup Learn about animal anatomy and behaviors diets families and the dangers they face in the wild Get up close and we do mean CLOSE to more than 80 animals that are both familiar and not so familiar

including regal lions playful pandas fearsome Gila monsters and creepy tarantulas Examine world maps to learn about amphibians wild cats and primates across the globe Read about some special human animal relationships as well as challenges that arise when they share a habitat Then learn how people are working to save and protect endangered species And for your final thrill find out how YOU can become a wildlife vet too
