Conceptualization and Interpretation A Case Study *Adult Physical Conditions* Amy J Mahle,Amber L Ward,2018-04-17 The go to text reference for class clinical and practice A who s who of experts and educators brings you practical in depth coverage of the most common adult conditions and the corresponding evidence based occupational therapy interventions Written for OTAs to meet their unique needs this approach combines theory with the practical evidence based functional content that develops the critical thinking and clinical reasoning skills that are the foundation for professional knowledgeable creative and competent practice **Neural Implementations of Expertise** Merim Bilalić, Robert Langner,Guillermo

Campitelli,Luca Turella,Wolfgang Grodd,2015-12-18 When we think about expertise we usually consider people who master tasks at a level not reachable by most other people Although we rarely realise it however most humans are experts in many aspects of everyday life This expertise enables us to find our way through a complex environment that is our life For instance we can instantly recognise multiple objects and relations between them to form a meaningful unit such as an office Thus research on expertise is not only important to investigate the cognitive and neural processes within an elite group but it is also a powerful tool to understand how everyone can acquire complex skills The goal of this Research Topic is to shed further light on the common and distinct neural mechanisms that implement various kinds of expertise We broadly define expertise as skill in any perceptual cognitive social or motor domain with the common core being optimised information processing due to knowledge acquired from repeated experiences Thus we are interested in the full range of mental processes modulated or modified by expertise from simple object or pattern recognition to complex decision making or problem solving in a particular domain These domains can range from everyday or occupational expertise to sports and rather artificial domains such as board games In all cases the aim should be to elucidate how the brain implements these sometimes incredible feats

We are particularly interested in connecting cognitive theories about expertise and expertise related performance differences with models and data on the neural implementation of expertise We welcome original research contributions using the full range of behavioural neuroscience methods as well as theoretical methodological or historical reviews and opinion papers focusing on any of the above mentioned aspects
