Ecology And The Crisis Of Overpopulation Future Prospects For Global Sustainability:

Ecology and the Crisis of Overpopulation Anup Shah, 1998 Current population growth is leading to a depletion in natural resources and could eventually cause irreversible damage to the environment This book attempts to explain trends in the growth of the global population and the ecological consequences by blending the insights of analytical economics and behavioural ecology The book begins by looking at population from a long term perspective and considers the ecological influences before going on to examine the economics of population growth Reproduction decisions of the family are then analysed and the welfare effect of these decisions on society as a whole are considered Anup Shah pays particular attention to policies which could try to prevent or cure overpopulation He asks whether there is a case for intervening in order to prevent overpopulation and suggests that one way of reducing the effects of population growth is through technological advances which can help compensate for the adverse external effects Finally he examines the future of urban centres in the light of population growth The book is written from a multidisciplinary approach and will have a wide readership throughout the social sciences It will have particular appeal for economists geographers earth scientists ecologists environmentalists and those working in the area of development studies

The State of the Earth Paul K. Conkin, 2006-12-15 An assessment of where we are where we are headed and what we need to do before it is too late Instructive well researched and easy to read

John T Ackerman Strategic Studies Quarterly This era of staggering scientific and technological innovations with major changes in agriculture manufacturing commerce and communications seems to document unparalleled human achievement Yet when we examine the long term implications it becomes clear that the delicate environmental balance that sustains life on this planet is under serious threat and the past century may be remembered not as a period of great progress but as one marked by unrestrained consumption and failure to come close to a sustainable use of the earth's limited natural resources In *The State of the Earth* noted historian Paul K Conkin provides a comprehensive analysis of the many environmental hazards that humans must face in this still young century Our activities have threatened the survival of many plants and animals created scarcities in cultivatable soils and water needed for irrigation used up a large share of fossil fuels polluted air and water and most likely created conditions that will lead to devastating climate changes This is an invaluable resource for those who desire a broad yet thorough and scientifically informed introduction to present environmental challenges

These can be integrated with the case studies to shape individual interests and teaching strategies The volume presents an imaginative array of texts from scientific papers to poetry legal decisions to historical accounts personal essays to economic analysis Taken together these selections provide a balanced authoritative and up to date treatment of key issues in environmental studies

Global Biopiracy Ikechi Mgbeoji, 2011-11-01 Legal control and ownership of plants and traditional knowledge of the uses of plants TKUP is a vexing issue The phenomenon of appropriation of plants and TKUP otherwise known as biopiracy thrives in a cultural milieu where non Western forms of knowledge are systemically marginalized and devalued as folk knowledge or characterized as inferior Global Biopiracy rethinks the role of international law and legal concepts the Western based Eurocentric patent systems of the world and international agricultural research institutions as they affect legal ownership and control of plants and TKUP The analysis is cast in various contexts and examined at multiple levels The first deals with the Eurocentric character of the patent system international law and institutions The second involves the cultural and economic dichotomy between the industrialized Western world and the westernizing developing world The third level of analysis considers the phenomenal loss of human cultures and plant diversity Exhaustively researched and eloquently argued Global Biopiracy sheds new light on a contentious topic The impact of intellectual property law on indigenous peoples and informal or traditional innovations is a field of study that currently includes only a handful of scholars Biopiracy will be an invaluable resource for students teachers and legal practitioners

Ecology and Human Well-being Raghubir Singh Pirta, 2007 Ecology needs contributions from a number of scholarly fields Following an inter disciplinary approach the book raises global

and local issues about the great challenge that humanity faces to combine the marginal society's needs for survival and security. Human well-being lies in the cognitive revolution where ecology and culture co-evolve. In this lucidly written book, one encounters the fundamental evolutionary dilemma: the emergence of cooperative relationships in a fierce competitive scenario. And to resolve it, the book argues on the biological and cultural evolution of cooperation, drawing evidence from the social structures of monkeys, men, and deities. It fashions an integrative view of human well-being where material and non-material coalesce. The book denies negative relationship of poverty and environment not as social chauvinism but for singular materialistic notions of human well-being. Though Himachal Pradesh is a model of social harmony and development for the other Himalayan states, there is an apprehension that the gigantic interventions may cause disruptions in these socio-cultural processes. For evolutionary psychologists and biologists, the volume is a rich source of novel hypotheses; it may also serve as a useful reference book for all the social scientists pursuing environmental issues. *American Book Publishing Record Cumulative 1998*, R. The new and extended Second Edition of the award-winning textbook *Sustainability Marketing: A Global Perspective* provides a sustainability-oriented vision of marketing for the twenty-first century. Adopting a consumer marketing focus, it emphasises integrating sustainability principles into both marketing theory and the practical decision-making of marketing managers. The book shows how the complexities of sustainability issues can be addressed by marketers through a systematic step-by-step approach. The steps involve an analysis of socio-environmental priorities to complement conventional consumer research, an integration of social, ethical, and environmental values into marketing strategy development, a new consumer-oriented sustainability marketing mix to replace the outmoded and producer-oriented 4Ps, and finally an analysis of how marketing can go beyond responding to social change to contribute to a transformation to a more sustainable society. Without taking such steps, marketing will continue to drive global crises linked to climate change, poverty, food shortages, oil depletion, and species extinction, instead of helping to tackle them.
