*Economic Logistics* Sten A. Thore, 1991-10-18 This work uses techniques of optimization and operations research to develop the first comprehensive survey of the entire field of the optimization of resource production and distribution systems Sten Thore proposes an economic logistics that is similar to the well known concept of military logistics but which is expanded to include such features as the optimal location of plants inventories and retail outlets and the management of hierarchical multi echelon production inventory and distribution systems The study of individual features of this supply process is familiar from operations research but Thore joins these elements together into larger analytic structures encompassing the production and distribution system in an entire industry Following an introductory chapter and a review of the saddle point theory coauthored with W W Cooper Thore explores the three dimensions of the supply process synthesis the spatial dimension as in simple transportation systems the vertical dimension extending from resources to finished consumer goods as in activity analysis and the time dimension as in inventory accumulation and investment The combination of these then leads to models of such diverse subjects as regional warehouse systems activity analysis and activity networks multi stage warehouse systems of intermediate goods distribution networks and spatial equilibrium Each chapter contains its own exercises which are solved numerically and discussed in great detail and illustrate such optimization techniques as linear and nonlinear programming goal programming and goal focusing chance constrained programming and infinite games This work is designed for use in graduate courses in economics and mathematics modeling and will also be a useful addition to college and university library collections *The Journal of Agricultural Economics Research* ,1991 *Journal of Agricultural Economics Research* ,1949

**The Diversity, Complexity, and Evolution of High Tech Capitalism** Sten A. Thore, 2012-12-06 In his book Jurassic Park and in the movie based on the book Michael Crichton describes a crazed professor who through techniques of genetic engineering manages to recreate the dinosaurs and giant ferns of 65 million years past Once the giant Tyrannosaurus Rex is brought to life a powerful dynamics sets in evolution The prehistoric world embarks on a collision course with man Researching his book Crichton had been reading up on paleontology and on the mathematical theory of evolution catastrophes and chaos Crichton explains some of the twists of nonlinear mathematics that are rewriting not only thermodynamics physics and chemistry that all grapple with evolving and turbulent processes but also paleontology genetics medicine and even anthropology Collapse and chaos is not limited to prehistoric animal kingdoms and ancient civilizations The collapse of the Soviet Union and the political and economic chaos in its aftermath demonstrate that modern civilizations are just as vulnerable This book aims at reexamining some main portions of the discipline of economics from the point of view of economic change and creativity There are two aspects to this perspective First diversity and complexity The range of different kinds of high technology products available to consumers and producers increases rapidly Each product is the result of a long and complex production hierarchy As these hierarchies grow they deliver ever more diversified and complex high tech goods Other hierarchies fall by the wayside
