Economics Of Carbon Sequestration In Forestry Hardcover:

Economics of Carbon Sequestration in Forestry, 1997 **Economics of Carbon Sequestration in Forestry** Terry J. Logan, 1997-12-29 Since the 1992 Earth Summit there have been increased efforts on an international scale to address global climate change Reducing the increased levels of CO₂ and other greenhouse gases which are believed to be contributing to this climatic change will require major effort on the part of the world's governments This means that the environmental economic social and political consequences of climate change must be understood and that strategies to mitigate climate change must also address these issues The workshop detailed in this book concentrated on how economic principles and analysis could contribute to the planning of forestry projects aimed at affecting terrestrial carbon balances More than 30 international scientists came together for one week near Stockholm Sweden and divided into working groups charged with addressing a specific issue and preparing a paper within this time frame This book contains the majority of papers presented at this meeting and includes both the working group papers and the individually presented papers

Handbook of Forest Resource Economics Shashi Kant, Janaki Alavalapati, 2014-04-03 It is increasingly recognized that the economic value of forests is not merely the production of timber Forests provide other key ecosystem services such as being sinks for greenhouse gases hotspots of biodiversity tourism and recreation They are also vitally important in preventing soil erosion and controlling water supplies as well as providing non timber forest products and supporting the livelihoods of many local people This handbook provides a detailed comprehensive and broad coverage of forest economics including traditional forest economics of timber production economics of environmental role of forests and recent developments in forest economics The chapters are grouped into six parts fundamental topics in forest resource economics economics of forest ecosystems economics of forests climate change and bioenergy economics of risk uncertainty and natural disturbances economics of forest property rights and certification and emerging issues and developments Written by leading environmental forest and natural resource economists the book represents a definitive reference volume for students of economics environment forestry and natural resource economics and management **The Global Economics of Forestry** William F. Hyde, 2012-05-23 This book traces the economic and biological pattern of forest development from initial settlement and harvest activity at the natural forest frontier to modern industrial forest plantations It builds from diagrams describing three discrete stages of forest development and then discusses the management and policy implications associated with each supporting its observations with examples and data from six continents and from both developed and developing countries It shows that characteristic distinctions between the three stages make forestry unusual in natural resource management and that effective policy requires different even contrasting decisions at each stage William F Hyde's comprehensive discussion covers a wide range of issues including the impacts of both specific forest policies and broader macroeconomic policies the unique requirements of current issues such as global warming biodiversity and tourism and the

complexities of the different forest products industries Concluding chapters review the roles of the newer institutional landowners of smaller private and farm landowners and of public agencies This highly original volume reaches far beyond forest economics it explains what forestry can do for regional development and environmental conservation and what policies designed for other sectors and the macro economy can do for forestry Forestry Economics John E. Wagner, 2023-12-22

Forestry Economics introduces students and practitioners to the economics of managing forests and forest enterprises The book adopts the approach of managerial economics textbooks and applies this to the unique problems and production processes faced by managers of forests and forest enterprises What many future forest and natural resource managers need is to understand what economic information is and how to use it to make better business and management decisions John E Wagner draws on his 30 years of experience teaching and working in the field of forest resource economics to present students with an accessible understanding of the unique production processes and problems faced by forest and other natural resource managers The second edition has been updated to include Expanded discussion of compounding discounting and capital budgeting as well as an expanded discussion of when to replace a capital asset that has i costs but no direct revenue stream such as a machine ii costs and a direct annual revenue stream such as a solar array or iii costs and a periodic revenue stream illustrated by the forest rotation problem New practical examples to provide students with applications of the concepts being discussed in the text most notably on New Zealand and a Radiata Pine *Pinus radiata* Plantation A brand new chapter that develops business plans for for profit businesses to illustrate how a business plan is derived from the economic information contained within the Architectural Plan for Profit and how it can be used to make business decisions about continuing to operate a business or to start a new business This textbook is an invaluable source of clear and accessible information on forestry economics and management not only for economics students but also for students of other disciplines and those already working in forestry and natural resources *Climate Change, Climate Science and Economics* G. Cornelis van Kooten, 2012-08-30 This volume enables readers to understand the complexity associated with climate change policy and the science behind it For example the author describes the criticism and defense of the widely known hockey stick temperature graph derived from combining instrumental data and proxy temperature indications using tree ring ice core and other paleoclimatic data Readers will also learn that global warming cannot easily be avoided by reducing CO₂ and other greenhouse gas emissions in rich countries Not only is emissions reduction extremely difficult in rich countries but demands such as the UN mandate to improve the lives of the poorest global citizens cannot be satisfied without significantly increasing global energy use and CO₂ emissions Therefore the author asserts that climate engineering and adaptation are preferable to mitigation particularly since the science is less than adequate for making firm statements about the Earth's future climate Readers will also learn that global warming cannot easily be avoided by reducing CO₂ and other greenhouse gas emissions in rich countries Not only is emissions reduction extremely difficult in rich countries but demands such as the UN mandate to

improve the lives of the poorest global citizens cannot be satisfied without significantly increasing global energy use and CO₂ emissions Therefore the author asserts that climate engineering and adaptation are preferable to mitigation particularly since the science is less than adequate for making firm statements about the Earth's future climate The Economics of Ecosystems and Biodiversity for Local and Regional Policy Makers , **Environmental Economics in Developing Countries** Achiransu Acharyya,2022-11-02 The COVID 19 pandemic has laid bare the vulnerabilities of socio economic systems globally and exposed the risks that natural capital degradation imposes on human health economy and society This book studies the environmental challenges faced by developing economies in a post COVID 19 world Exploring diverse case studies from South Asia and Sub Saharan Africa the volume discusses the impact that economic development and recently COVID 19 has had on the environment ecology and economy of these regions It analyses nature conservation policies aimed at minimizing ecological damage arising from economic development and discusses the policy objectives of sustainable development It also highlights the significant role that environmental economics networks have played in capacity building framing of policies using ecological economics tools and developing a local leadership trained in addressing local sustainability issues An important contribution to the study of environmental economics of the Global South the book will be of interest to students and researchers of economics environment development studies development economics environmental policies and South Asia studies It will also be useful for policymakers and NGOs working in this field

Effects of climate change on the profitability of carbon credit sales Nina Becker,2010-09-01 Nina Becker's research provides a thorough analysis of the economics of carbon sequestration from an interdisciplinary perspective on the impacts of climate change on forest resources The analysis is based on an integrated assessment that links a climate yield model with a profitability analysis In specific Nina Becker investigates tree productivity under global and regional climate change scenarios Furthermore she demonstrates the potential effects of increasing tree productivity on the profitability of carbon credit sales For this purpose she conducted a case study on teak *Tectona grandis* L f plantations on the Pacific Coast of Costa Rica Nina Becker points out the potential of and future challenges for forest plantations in mitigating climate change The book is aimed at scholars as well as NGOs and policymakers with an interest in forests and climate change US forest sector greenhouse mitigation potential and implications for nationally determined contributions Christina Van Winkle,Justin S. Baker,Daniel Lapidus,Sara Ohrel,John Steller,Gregory Latta,Dileep Birur,2017-05-30 Countries globally are committing to achieve future greenhouse gas emissions reductions to address our changing climate as outlined in the Paris Agreement from the United Nations Framework Convention on Climate Change UNFCCC Conference of the Parties These commitments called nationally determined contributions NDCs are based on projected anthropogenic greenhouse gas GHG emissions levels across all sectors of the economy including land use land use change and forestry LULUCF activities Projecting LULUCF emissions is uniquely challenging and the uncertainty of future LULUCF emissions could require additional mitigation efforts

in the land use sectors to reduce the risk of NDC noncompliance The objectives of this paper are to provide critical information on what forest sector mitigation activities are currently underway in the United States on private lands review recent literature estimates of the mitigation potential from these activities and associated economic costs identify gaps in the literature where additional analytical work is needed and provide recommendations for targeted mitigation strategies should US emissions approach or exceed targeted post 2020 NDC levels Social and Economic Benefits of Protected Areas

Marianne Kettunen, Patrick ten Brink, 2013-09-05 Protected areas PAs contain biodiversity and ecosystems of high conservation value In addition these areas provide a range of benefits both direct and indirect to our societies and economies i e so called ecosystem services These services include for example an ecosystem s ability to regulate floods and climate purify water secure the pollination of crops and create opportunities for recreation culture and tourism This book offers a comprehensive introduction to the socio economic benefits of PAs and PA networks and provides step by step practical guidance on identifying assessing and valuing the various ecosystem services and related benefits provided by PAs It also aims to improve the communication of PA benefits to different stakeholders and the general public It is shown that identifying and valuing the socio economic benefits of PAs can be beneficial for several reasons Demonstrating socio economic importance of a protected site can significantly increase political and stakeholder support for the site and resolve conflicts between different interest groups This can lead to positive changes in policies and decision making Insights on PA benefits are also needed to identify a combination of actions and land use practices that best support the sustainable and equitable utilisation of these benefits while retaining a site s conservation goals Finally demonstrating different benefits can help to discover alternative and sustainable sources for financing the management of PAs **Climate Change 2014:**

Mitigation of Climate Change Ottmar Edenhofer, 2015-01-26 This latest Fifth Assessment Report of the IPCC will again form the standard reference for all those concerned with climate change and its consequences *Wood Energy in Developed Economies* Francisco X. Aguilar, 2014-08-27 There has been a recent resurgence of interest in wood energy as part of a sustainable range of renewable energy options This book addresses the current gap in the energy and public policy literature for a reference book that compiles the most recent wood energy assessments and evaluates current and potential future wood energy uses and the role for public policy to foster efficient use of the most widely consumed renewable energy in the world It brings together a group of expert authors covering topics from forest management operations and engineering to socio economics and energy policy perspectives It thus covers practical issues such as silviculture harvesting processing comparative cost estimates public policy tools and market effects As such the book provides a comprehensive review of the complex dimensions of wood energy as well as practical guidance for professionals researchers and advanced students It will also provide invaluable guidance for economic development agencies practitioners and policy makers when evaluating the impacts of wider wood energy adoption as part of a strategy for sustainable energy generation The main focus is on

industrialised production and developed economies particularly the USA and Europe Avoided Deforestation Charles Palmer, Stefanie Engel, 2009-04 Avoided deforestation can be characterized as the use of financial incentives to reduce rates of deforestation and forest degradation with much of the focus on forests in tropical countries While avoided deforestation as a policy issue is not new the current debate in academic and policy circles on including it in future climate change mitigation strategies such as the Clean Development Mechanism is gathering pace and this debate is only likely to intensify as negotiations continue over what should be included in the successor agreement to the Kyoto Protocol which is set to expire in 2012 Up until now however the debate in terms of the scientific and economic implications of avoided deforestation has not been brought together This book aims to bring together important research findings in the area along with their policy implications whilst linking avoided deforestation to political economy as well as to the latest developments in environmental and natural resource economics **Environmental Valuation in Developed Countries** David W. Pearce, 2006

Environmental Valuation in Developed Countries will be of interest to policy makers and economists in search of a variety of methodologies related to environmental valuation Political Studies Review This is the second of two volumes of case studies that illustrate how environmental economists place values on environmental assets and on the flows of goods and services generated by those assets The first volume Valuing the Environment in Developing Countries illustrates methodologies and applications of valuation techniques in the developing world this volume concentrates on developed or wealthy nations where the first examples of economic valuation of the environment were carried out This important book assembles studies that discuss broad areas of application of economic valuation from amenity and pollution through to water and health risks from forestry to green urban space In this his last book the late David Pearce brought together leading European experts contributors to some two dozen case studies exploring the frontiers of economic valuation of natural resources and environmental amenity in the developed world Essays on the role of valuation in environmental policy environmental justice and green accounts are presented and case study topics include valuing forestry benefits GM crops water use and quality externalities in the electricity sector renewable energy benefits electricity transmission line disamenity urban greenspace chemical risks noise pollution Economic valuation has undoubtedly made an important contribution to the environmental debate and the contributors illustrate how sophisticated techniques have become and how powerful their application can be As such this significant volume will prove essential reading for academics researchers students and practitioners in the field of environmental economics *The Economics of Alternative Energy Sources and Globalization* Andrew Schmitz, Norbert L. Wilson, Charles B. Moss, David Zilberman, 2011 Considerable effort and money are devoted to developing alternative energy sources such as wind power solar power cellulosic ethanol and biofuels This ebook is a collection of research papers on alternative energy sources presented at the Economics o Valuing forest ecosystem services: a training manual for planners and project developers Food and Agriculture Organization of the United Nations, 2019-02-28 The degradation of

ecosystems including forests and the associated loss of biodiversity particularly due to human induced threats and climate change has gained increased attention from scientists and policymakers The Millennium Ecosystem Assessment presented a new conceptual framework that puts ecosystem services at the centre and links human well being to the impacts on ecosystems of changes in natural resources The Economics of Ecosystems and Biodiversity initiative drew further attention to the economic benefits of conserving ecosystems and biodiversity supporting the idea that economic instruments if appropriately applied developed and interpreted can inform policy and decision making processes Only a few ecosystem services however have explicit market value and are traded in open markets many especially those categorized as having passive use value remain invisible and are rarely accounted for in traditional economic systems The failure to appropriately consider the full economic value of ecosystem services in decision making enables the continued degradation and loss of ecosystems and biodiversity Most ecosystem services are considered public goods and tend to be overexploited by society Many methods have been applied to the economic valuation of ecosystem services The use of these methods as well as the interpretation of their results requires familiarity with the ecological political normative and socio economic context and the science of economics Recognizing demonstrating and capturing the value of ecosystem services can play an important role in setting policy directions for ecosystem management and conservation and thus in increasing the provision of ecosystem services and their contributions to human well being The aim of this manual is to enhance understanding of ecosystem services and their valuation The specific target group comprises governmental officers in planning units and field level officers and practitioners in key government departments in Bangladesh responsible for project development including the Ministry of Environment and Forests and its agencies Most of the examples and case studies presented herein therefore are tailored to the Bangladesh context but the general concepts approaches and methods can be applied to a broad spectrum of situations This manual focuses on valuing forest related ecosystem services including those provided by trees outside forests It is expected to improve valuation efforts and help ensure the better use of such values in policymaking and decision making Among other things the manual explores the basics of financial mathematics e g the time value of money discounting cost benefit analysis and profitability and risk indicators the main methods of economic valuation examples of the valuation of selected ecosystem services and inputs for considering values in decision making

Encyclopedia of Energy, Natural Resource, and Environmental Economics ,2013-03-29 Every decision about energy involves its price and cost The price of gasoline and the cost of buying from foreign producers the price of nuclear and hydroelectricity and the costs to our ecosystems the price of electricity from coal fired plants and the cost to the atmosphere Giving life to inventions lifestyle changes geopolitical shifts and things in between energy economics is of high interest to Academia Corporations and Governments For economists energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources energy economics which focuses on energy related

subjects such as renewable energy hydropower nuclear power and the political economy of energy resource economics which covers subjects in land and water use such as mining fisheries agriculture and forests environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government

Economic Analysis of Land Use in Global Climate Change Policy

Thomas W. Hertel, Steven K. Rose, Richard S. J. Tol, 2009-05-07 Land has long been overlooked in economics That is now changing A substantial part of the solution to the climate crisis may lie in growing crops for fuel and using trees for storing carbon This book investigates the potential of these options to reduce greenhouse gas emissions estimates the costs to the economy and analyses the trade offs with growing food The first part presents new databases that are necessary to underpin policy relevant research in the field of climate change while describing and critically assessing the underlying data the methodologies used and the first applications Together the new data and the extended models allow for a thorough and comprehensive analysis of a land use and climate policy This book outlines key empirical and analytical issues associated with modelling land use and land use change in the context of global climate change policy It places special emphasis on the economy wide competition for land and other resources especially The implications of changes in land use for the cost of climate change mitigation Land use change as a result of mitigation and Feedback from changes in the global climate to land use By offering synthesis and evaluation of a variety of different approaches to this challenging field of research this book will serve as a key reference for future work in the economic analysis of land use and climate change policy

The Economic, Social and Political Elements of Climate Change Walter Leal Filho, 2010-11-23 A unique feature of this book is its strong practice oriented nature it contains a wide range of papers dealing with the social economic and political aspects of climate change exemplifying the diversity of approaches to climate change management taking place all over the world in a way never seen before In addition the book describes a number of projects and other initiatives happening in Africa Asia Europe Latin American and the Australasian region providing a profile of the diversity of works taking place today
